# Contents

1	<b>Introduction</b>	<b>1</b>
1.	Basic Phenomena of Superconductivity 1	
	<i>1.1 Discovery and Origin, 1 1.2 Magnetoresistance, 4</i>	
	<i>1.3 Diamagnetism, 6 1.4 Distribution of Superconductivity</i>	
	<i>Among the Elements, 7</i>	
2.	Selected Applications 8	
	<i>2.1 Electromagnets, 8 2.2 Suspension Systems, 9</i>	
	<i>2.3 Electrical Switching Elements, 10 2.4 Persistent Current</i>	
	<i>Storage, 12 2.5 Bolometers, 15 2.6 The Wadve, 16</i>	
3.	Book Organization 17	
2	<b>Superconductivity in Bulk Materials</b>	<b>18</b>
4.	General Survey 18	
	<i>Superconducting State, 18 4.2 Characteristics of the</i>	
	<i>4.3 Factors that Influence the</i>	
	<i>Phase Transition, 27</i>	
5.	Field and Current Induced Transitions 28	
	<i>5.1 Induced Transitions in Applications, 28 5.2 The Super-</i>	
	<i>5.3 The Ellipsoid</i>	
	<i>in the Intermediate State, 32 5.4 Current Induced Transition</i>	
	<i>in a Wire, 35 5.5 The Superconducting Ring, 37</i>	
6.	Thermodynamics of the Phase Transition 40	
	<i>6.1 Gibbs Thermodynamic Potential for a Superconductor, 40</i>	
	<i>6.2 Free Energy and Entropy in the Superconducting State, 42</i>	
	<i>6.3 Latent Heat of Transition and Specific Heat, 43</i>	
	<i>6.4 The Magneto-Caloric Effect, 44</i>	

7.	Interphase Boundary Energy Effects 45	
	<i>7.1 Introduction, 45 7.2 Superconducting Domains, 47</i>	
	<i>7.3 Macroscopic Domain Effects, 51 7.4 Class II Superconductors, 54</i>	
8.	Superconductive Elements and Alloys 57	
	<i>8.1 The Distribution of Superconductivity in the Periodic System, 57 8.2 Non-Magnetic Alloys, 58 8.3 Alloys of Transition Elements and the Rare Earths, 59</i>	
<b>3.</b>	<b>Theoretical Aspects</b>	<b>62</b>
9.	Classical Theory of Resistivity 62	
	<i>9.1 The Electron Mean Free Path, 62 9.2 Mathiessen's Rule, 64</i>	
10.	Phenomenological Theories of Superconductivity 65	
	<i>10.1 Historical Introduction, 65 10.2 The London Theory, 66</i>	
	<i>10.3 Kinetic Energy of the Superelectrons, 69 10.4 Field Penetration into a Slab, 71 10.5 The Quantized Fluxoid, 72</i>	
	<i>10.6 Field Penetration into a Thin-Walled Cylinder, 75</i>	
	<i>10.7 The Ginzburg-Landau Theory, 76 10.8 The Pippard Non-Local Theory, 80 10.9 The Non-Local Penetration Depth, 83</i>	
11.	The Microscopic Theory of Superconductivity 87	
	<i>11.1 The Free Electron Theory of Metals, 88 11.2 The Bardeen-Cooper-Schrieffer Theory, 92 11.3 Calculation of the Electron Pairing Velocity, 94 11.4 The BCS Model Applied to Superconductive Tunneling, 96</i>	
12.	Applications of Potential Theory to Current Flow in Superconductors 99	
	<i>12.1 Analogies to Electrostatics, 99 12.2 Cylindrical Coordinate Systems, 101 12.3 Current Flow in Flat Sheets, 102 12.4 The Image Theorem for Superconductors, 103</i>	
<b>4.</b>	<b>Superconductive Films</b>	<b>106</b>
13.	Introduction 106	
14.	Theoretical Dependence of Electrical Properties on Film Thickness 107	
	<i>14.1 Film Resistivity, 107 14.2 Critical Current Density, 109 14.3 Critical Field, 112</i>	
15.	Magnetic Field Induced Transitions 115	
	<i>15.1 Field Parallel to Film Surface, 115 15.2 Field Normal to Film Surface, 119</i>	
16.	Current Induced Transitions 121	
	<i>16.1 Flat Films, 122 16.2 Cylindrical and Shielded Films, 126</i>	

17. Joule Heating Effects 129  
*17.1 Thermal Latching, 129 17.2 Thermal Propagation, 132*  
*17.3 Thermal Propagation Velocity, 135*

18. Dependence of Film Properties on Preparation 141  
*18.1 Miscellaneous Methods, 141 18.2 Vacuum Deposition, 142*

**5. Superconducting Solenoids and Magneto-Mechanical Devices 145**

19. Introductory Summary 145

20. The Filamentary Superconductors 148  
*Modeling of Particle Application to the Permanent Magnet, 157*

21. Superconducting Solenoids 158  
*21.1 Coil Optimization, 158 21.2 Solenoid Construction and Operation, 160*

22. Magnetic Flux Confinement and Compression 161

23. Superconducting Bearings 165  
*23.1 Introduction, 165 23.2 Planar Bearings, 166*  
*23.3 Spherical and Cylindrical Bearings, 171*

24. Superconducting Motors 173

**6. Superconductive Amplifiers and Switching Elements 179**

25. Wire-Wound Cryotrons 179  
*25.1 Cryotron Small Signal Amplifiers, 179 25.2 Cryotron Switching Elements, 183*

26. Crossed Film Cryotrons 192  
*26.1 The Unshielded Crossed-Film Cryotron, 192*  
*26.2 Electromagnetic Analysis of Crossed-Film Cryotron Structure, 195 26.3 The Shielded Crossed-Film Cryotron, 196*  
*26.4 Gain-Bandwidth Analysis, 199 26.5 Multi-Control Cryotrons, 202*

27. Parallel Film Structures 205  
*27.1 In-Line Cryotrons, 205 27.2 A Film Rectifier, 210*  
*27.3 Slow Wave Transmission Lines, 213*

28. Microwave Mixers and Demodulators 216

**7. 218**

29. Digital Storage Systems 219

30. Cryotron-Controlled Persistent Current Circuits 221  
*30.1 A Latching Circuit, 221 30.2 Persistent Current Loop, 223*

31.	Persistent Current Cells	225	
	<i>31.1 Introduction</i> ,	225	<i>31.2 Adiabatic Operation (Crowe Cell)</i> ,
	<i>227</i>	<i>31.3 Isothermal Operation (Persistor)</i> ,	231
	<i>31.4 Continuous Sheet Memory</i> ,	233	<i>31.5 Tolerance Analysis</i> ,
			235
32.	Resonant Cavities	240	
	<i>32.1 Introduction</i> ,	240	<i>32.2 Surface Impedance</i> ,
			242
	<i>32.3 Superconductive Resonant Cavities</i> ,		245
<b>8.</b>	<b>Superconductive Bolometers and Heat Flow Valves</b>		<b>248</b>
33.	Superconductive Bolometers	248	
	<i>33.1 Bolometers as Infrared Detectors</i> ,	248	<i>33.2 Description of Bolometer Systems</i> ,
	<i>249</i>	<i>33.3 Bolometer Responsivity</i> ,	253
	<i>33.4 Noise Mechanisms</i> ,	255	<i>33.5 Minimum Detectable Power</i> ,
			259
34.	Heat Switches and Converters	261	
	<i>34.1 The Magnetic Field Controlled Heat Valve</i> ,	261	
	<i>34.2 Applications of Thermal Valves</i> ,	263	<i>34.3 Temperature Controlled Current Switches</i> ,
		265	<i>34.4 Energy Converters</i> ,
			265
35.	Appendixes	266	
	<i>35.1 Solution of the Non-Local Integral</i> ,	266	<i>35.2 Surface Current Density on a Flat Superconducting Sheet</i> ,
			267
	<i>35.3 Analysis of the In-Line Cryotron</i> ,	269	
	Selected Bibliography	271	
	References	273	
	Index	281
