

CONTENTS

Preface xvii
To the Student xxv

PART I Introduction to Microbiology

1 The History and Scope of Microbiology 1

- The Discovery of Microorganisms 2
- The Spontaneous Generation Conflict 2
- The Recognition of the Microbial Role in Disease 7
- The Discovery of Microbial Effects on Organic and Inorganic Matter 9
- Microbiology in the Twentieth Century 11
- The Composition of the Microbial World 13
- The Scope and Relevance of Microbiology 13

2 The Study of Microbial Structure: Microscopy and Specimen Preparation 16

- Lenses and the Bending of Light 17
- The Light Microscope 18
 - The Bright-Field Microscope 18
 - Microscope Resolution 19
 - The Dark-Field Microscope 20
 - The Phase-Contrast Microscope 21
 - The Fluorescence Microscope 23
- Preparation and Staining of Specimens 24
 - Fixation 25
 - Dyes and Simple Staining 25
 - Differential Staining 25
 - Staining Specific Structures 25
- Electron Microscopy 27
 - The Transmission Electron Microscope 28
 - Specimen Preparation 29
 - The Scanning Electron Microscope 31

3 Prokaryotic Cell Structure and Function 36

- An Overview of Prokaryotic Cell Structure 37
 - Size, Shape, and Arrangement 37
 - Prokaryotic Cell Organization 39

- Prokaryotic Cell Membranes 40
 - The Plasma Membrane 41
 - Internal Membrane Systems 43
- The Cytoplasmic Matrix 44
 - Inclusion Bodies 44
 - Ribosomes 47
 - Molecular Chaperones 48
- The Nucleoid 50
- The Prokaryotic Cell Wall 51
 - Peptidoglycan Structure 52
 - Gram-Positive Cell Walls 53
 - Gram-Negative Cell Walls 53
 - The Mechanism of Gram Staining 56
 - The Cell Wall and Osmotic Protection 56
- Components External to the Cell Wall 58
 - Capsules, Slime Layers, and S-Layers 58
 - Pili and Fimbriae 59
 - Flagella and Motility 59
- Chemotaxis 63
- The Bacterial Endospore 66

4 Eucaryotic Cell Structure and Function 72

- An Overview of Eucaryotic Cell Structure 74
- The Cytoplasmic Matrix, **Microfilaments**, Intermediate Filaments, and Microtubules 74
- The Endoplasmic Reticulum 77
- The Golgi Apparatus 77
- Lysosomes and Endocytosis 78
- Eucaryotic Ribosomes 80
- Mitochondria 81
- Chloroplasts 81
- The Nucleus and Cell Division 83
 - Nuclear Structure 83
 - The Nucleolus 84
 - Mitosis and Meiosis 85
- External Cell Coverings 87
 - Cilia and Flagella 89
- Comparison of Prokaryotic and Eucaryotic Cells 90

PART II

Microbial Nutrition, Growth, and Control

- 5 Microbial Nutrition 97**
- The Common Nutrient Requirements 98
 - Requirements for Carbon, Hydrogen, and Oxygen 98
 - Nutritional Types of Microorganisms 99
 - Requirements for Nitrogen, Phosphorus, and Sulfur 100
 - Growth Factors 100
 - Uptake of Nutrients by the Cell 101
 - Facilitated Diffusion 102
 - Active Transport 103
 - Group Translocation 104
 - Iron Uptake 105
 - Culture Media 105
 - Synthetic or Defined Media 106
 - Complex Media 106
 - Types of Media 106
 - Isolation of Pure Cultures 107
 - The Spread Plate and Streak Plate 107
 - The Pour Plate 109
 - Colony Morphology and Growth 110
- 6 Microbial Growth 113**
- The Growth Curve 114
 - Lag Phase 114
 - Exponential Phase 114
 - Stationary Phase 115
 - Death Phase 115
 - The Mathematics of Growth 115
 - Measurement of Microbial Growth 116
 - Measurement of Cell Numbers 117
 - Measurement of Cell Mass 120
 - Growth Yields and the Effects of a Limiting Nutrient 120
- The Continuous Culture of Microorganisms 121
- The Chemostat 121
 - The Turbidostat 121
- Balanced and Unbalanced Growth 122
- The Influence of Environmental Factors on Growth 123
- Solutes and Water Activity 123
 - pH 124
 - Temperature 125
 - Oxygen Concentration 129
 - Pressure 130
 - Radiation 130
- 7 Control of Microorganisms by Physical and Chemical Agents 135**
- Definition of Frequently Used Terms 136
 - The Pattern of Microbial Death 137
 - Conditions Influencing the Effectiveness of Antimicrobial Agent Activity 138
 - The Use of Physical Methods in Control 138
 - Heat 138
 - Filtration 141
 - Radiation 142
 - The Use of Chemical Agents in Control 143
 - Phenolics 143
 - Alcohols 145
 - Halogens 145
 - Heavy Metals 146
 - Quaternary Ammonium Compounds 147
 - Aldehydes 147
 - Sterilizing Gases 147
 - Evaluation of Antimicrobial Agent Effectiveness 147

PART III

Microbial Metabolism

- 8 Metabolism: Energy and Enzymes 151**
- Energy and Work 152
 - The Laws of Thermodynamics 152
 - Free Energy and Reactions 153
 - The Role of ATP in Metabolism 154
 - Oxidation-Reduction Reactions and Electron Carriers 155
 - Enzymes 157
 - Structure and Classification of Enzymes 157
 - The Mechanism of Enzyme Reactions 159
 - The Effect of Environment on Enzyme Activity 159
 - Enzyme Inhibition 160
- 9 Metabolism: The Generation of Energy 163**
- An Overview of Metabolism 164
 - The Breakdown of Glucose to Pyruvate 165
 - The Glycolytic Pathway 166
 - The Pentose Phosphate Pathway 167
 - The Entner-Doudoroff Pathway 168
 - The Tricarboxylic Acid Cycle 169
 - Electron Transport and Oxidative Phosphorylation 169
 - The Electron Transport Chain 170
 - Oxidative Phosphorylation 171
 - The Yield of ATP in Glycolysis and Aerobic Respiration 174
 - Fermentations 174
 - Anaerobic Respiration 176
 - Catabolism of Carbohydrates and Intracellular Reserve Polymers 178
 - Carbohydrates 178
 - Reserve Polymers 178
 - Lipid Catabolism 178
 - Protein and Amino Acid Catabolism 179
 - Oxidation of Inorganic Molecules 179
 - Photosynthesis 182
 - The Light Reaction in Eucaryotes and Cyanobacteria 182
 - The Light Reaction in Green and Purple Bacteria 185

10 Metabolism: The Use of Energy in Biosynthesis 190

- Principles Governing Biosynthesis 191
- The Photosynthetic Fixation of CO₂ 193
 - The Carboxylation Phase 193
 - The Reduction Phase 193
 - The Regeneration Phase 194
- Synthesis of Sugars and Polysaccharides 194
- The Assimilation of Inorganic Phosphorus, Sulfur, and Nitrogen 194**
 - Phosphorus Assimilation 196
 - Sulfur Assimilation 196
 - Nitrogen Assimilation 197
 - Nitrogen Fixation 198
- The Synthesis of Amino Acids 200
- Anaplerotic Reactions 201
- The Synthesis of Purines, Pyrimidines, and Nucleotides 203
 - Purine Biosynthesis 203
 - Pyrimidine Biosynthesis 204
- Lipid Synthesis 204
- Peptidoglycan Synthesis 206
- Patterns of Cell Wall Formation 208

11 Metabolism: The Synthesis of Nucleic Acids and Proteins 211

- Nucleic Acid Structure 212
 - DNA Structure 213
 - RNA Structure 213
- The Organization of DNA in Cells 213

- DNA Replication 216
 - Pattern of DNA Synthesis 217
 - Mechanism of DNA Replication 218
- DNA Transcription or RNA Synthesis 221
 - Transcription in Prokaryotes 222
 - Transcription in Eucaryotes 223
- Protein Synthesis 226
 - Transfer RNA and Amino Acid Activation 226
 - The Ribosome 228
 - Initiation of Protein Synthesis 228**
 - Elongation of the Polypeptide Chain 229
 - Termination of Protein Synthesis 232
 - Protein Folding and Splicing 232

12 Metabolism: Enzyme and Gene Regulation 236

- Metabolic Channeling 237
- Control of Enzyme Activity 238
 - Allosteric Regulation 238
 - Covalent Modification of Enzymes 239
 - Feedback Inhibition 241
- Regulation of mRNA Synthesis 242**
 - Regulation by Sigma Factors 242
 - Induction and Repression 243
 - The Mechanism of Induction and Repression 243
 - Positive Operon Control and Catabolite Repression 245
 - Attenuation 248
- Gene Regulation by Antisense RNA 250
- Control of the Cell Cycle 250

PART IV Microbial Genetics

13 Microbial Genetics: General Principles 255

- DNA as Genetic Material 256
- The Genetic Code 258
 - Establishment of the Genetic Code 258
 - Organization of the Code 258
- Gene Structure 258
 - Genes That Code for Proteins 260
 - Genes That Code for tRNA and rRNA 262
- Mutations and Their Chemical Basis 262
 - Mutations and Mutagenesis 262
 - Spontaneous Mutations 264
 - Induced Mutations 265
 - The Expression of Mutations 265
- Detection and Isolation of Mutants 269
 - Mutant Detection 269
 - Mutant Selection 269
 - Carcinogenicity Testing 271
- DNA Repair 272
 - Excision Repair 272
 - Removal of Lesions 272
 - Postreplication Repair 273
 - Recombination Repair 273

14 Microbial Genetics: Recombination and Plasmids 278

- Bacterial Recombination: General Principles 279
- Bacterial Plasmids 281
 - Fertility Factors 282
 - Resistance Factors 282
 - Col Plasmids 284
 - Other Types of Plasmids 284
- Transposable Elements 285
- Bacterial Conjugation 289
 - F⁺ X F⁻ Mating 290
 - Hfr Conjugation 290
 - F' Conjugation 290
- DNA Transformation 290
- Transduction 294
 - Generalized Transduction 295
 - Specialized Transduction 296
- Mapping and Sequencing the Genome 298
- Recombination and Genome Mapping in Viruses 305

15 Recombinant 310

- Historical Perspectives 3 11
- Synthetic DNA 314
- The Polymerase Chain Reaction 315
- Preparation of Recombinant DNA 3 18
 - Isolating and Cloning Fragments 3 18
 - Gene Probes 321
 - Isolating and Purifying Cloned DNA 323
- Cloning Vectors 324
 - Plasmids 3 2 4

- Phage Vectors 324
- Cosmids 325
- Artificial Chromosomes 325
- Inserting Genes into Eucaryotic Cells 326
- Expression of Foreign Genes in Bacteria 326
- Applications of Genetic Engineering 328
 - Medical Applications 328
 - Industrial Applications 330
 - Agricultural Applications 330
- Social Impact of Recombinant DNA Technology 330

PART V The Viruses

16 The Viruses: Introduction and General Characteristics 335

- Early Development of Virology 336
- General Properties of Viruses 337
- The Cultivation of Viruses 337
- Virus Purification and Assays 339
 - Virus Purification 339
 - Virus Assays 341
- The Structure of Viruses 342
 - Virion Size 343
 - General Structural Properties 343
 - Helical Capsids 344
 - Icosahedral Capsids 344
 - Nucleic Acids 346
 - Viral Envelopes and Enzymes 349
 - Viruses with Capsids of Complex Symmetry 349
- Principles of Virus Taxonomy 352

- The Assembly of Phage Particles 363
- Release of Phage Particles 364
- Reproduction of RNA Phages 364
- Temperate Bacteriophages and Lysogeny 365

18 The Viruses: Viruses of Eucaryotes 372

- Classification of Animal Viruses 373
- Reproduction of Animal Viruses 373
 - Adsorption of Virions 373
 - Penetration and Uncoating 376
 - Replication and Transcription in DNA Viruses 377
 - Replication and Transcription in RNA Viruses 378
 - Synthesis and Assembly of Virus Capsids 380
 - Virion Release 380
- Cytocidal Infections and Cell Damage 381
- Persistent, Latent, and Slow Virus Infections 383
- Viruses and Cancer 383
- Plant Viruses 384
 - Virion Morphology 384
 - Plant Virus Taxonomy 384
 - Plant Virus Reproduction 385
 - Transmission of Plant Viruses 386
 - Viruses of Fungi and Algae 387
 - Insect Viruses 387
 - Viroids and Prions 388

17 The Viruses: Bacteriophages 356

- Classification of Bacteriophages 357
- Reproduction of DNA Phages: The Lytic Cycle 357
 - The One-Step Growth Experiment 358
 - Adsorption to the Host Cell and Penetration 359
 - Synthesis of Phage Nucleic Acids and Proteins 360

PART VI The Diversity of the Microbial World

19 Microbial Taxonomy 393

- General Introduction and Overview 394
- Microbial Evolution and Diversity 395
- Taxonomic Ranks 397
- Classification Systems 398
 - Phenetic Classification 398
 - Numerical Taxonomy 398
 - Phylogenetic Classification 400
- Major Characteristics Used in Taxonomy 400
 - Classical Characteristics 400
 - Molecular Characteristics 401

- Assessing Microbial Phylogeny 405
 - Molecular Chronometers 405
 - Phylogenetic Trees 405
 - rRNA, DNA, and Proteins as Indicators of Phylogeny 406
- The Major Divisions of Life 407
 - Domains (Empires) 407
 - Kingdoms 409
- Bergey's Manual of Systematic Bacteriology** 411
 - The First Edition of **Bergey's Manual of Systematic Bacteriology** 411
 - The Second Edition of **Bergey's Manual of Systematic Bacteriology** 412
- A Survey of Bacterial Phylogeny and Diversity 413

- 20 **The Archaea** 421
- Introduction to the **Archaea** 422
 - Archaeal Cell Walls 422
 - Archaeal Lipids and Membranes 423
 - Genetics and Molecular Biology 423
 - Metabolism 425
 - Archaeal Taxonomy 425
 - Kingdom **Crenarchaeota** 428
 - Kingdom **Euryarchaeota** 429
 - The Methanogens 429
 - The Halobacteria 433
 - The Thermoplasms 433
 - The Thermococci 435
- 21 **Bacteria: The Deinococci and Nonproteobacteria Gram Negatives** 438
- Aquifex* and the Thermotogae 439
 - The Deinococci 440
 - Photosynthetic Bacteria 440
 - The Chloroflexi 442
 - Chlorobia 443
 - Prochloron and Cyanobacteria 443
 - The Planctomycetes 449
 - The Spirochetes 450
 - The Bacteroides 453
 - The Sphingobacteria 454
- 22 **Bacteria: The Proteobacteria** 458
- The α -Proteobacteria 459
 - The Purple Nonsulfur Bacteria 460
 - Rickettsia* and *Coxiella*** 460
 - The *Caulobacteraceae* and *Hyphomicrobiaceae*** 461
 - Family ***Rhizobiaceae*** 464
 - Nitrifying Bacteria 465
 - The β -Proteobacteria 466
 - Order ***Neisseriales*** 467
 - Order ***Burkholderiales*** 468
 - Order ***Nitrosomonadaceae*** 469
 - The γ -Proteobacteria 470
 - The Purple Sulfur Bacteria** 471
 - Order ***Thiotrichales*** 472
 - Order ***Methylococcales*** 473
 - Order ***Pseudomonadales*** 475
 - Order ***Vibrionales*** 475
 - Order ***Enterobacteriales*** 477
 - Order ***Pasteurellales*** 480
 - The δ -Proteobacteria 481
 - Order ***Desulfovibrionales*** 481
 - Order ***Myxococcales*** 482
 - The ϵ -Proteobacteria 485
- 23 **Bacteria: The Low G + C Gram Positives** 488
- Class ***Mollicutes*** (the Mycoplasmas) 490
 - Low G + C Gram-Positive Bacteria in ***Bergey's Manual*** 491
 - The Clostridia and Relatives 493
 - The Bacilli and Lactobacilli 495
 - Order ***Bacillales*** 495
 - Order ***Lactobacillales*** 497
- 24 **Bacteria: The High G + C Gram Positives** 506
- General Properties of the Actinomycetes 507
 - High G + C Gram-Positive Bacteria in ***Bergey's Manual*** 509
 - Suborder ***Actinomycineae*** 511
 - Suborder ***Micrococchineae*** 512
 - Suborder ***Corynebacterineae*** 513
 - Suborder ***Micromonosporineae*** 514
 - Suborder ***Propionibacterineae*** 515
 - Suborder ***Streptomycineae*** 516
 - Suborder ***Streptosporangineae*** 517
 - Suborder ***Frankineae*** 518
 - Order ***Bifidobacteriales*** 519
- 25 **The Fungi (Eumycota), Slime Molds, and Water Molds** 522
- Distribution 524
 - Importance 524
 - Structure 524
 - Nutrition and Metabolism 527
 - Reproduction 528
 - Characteristics of the Fungal Divisions 530
 - Division ***Zygomycota*** 530
 - Division ***Ascomycota*** 530
 - Division ***Basidiomycota*** 534
 - Division ***Deuteromycota*** 534
 - Division ***Chytridomycota*** 534
 - Slime Molds and Water Molds 535
 - Division ***Myxomycota*** (Acellular Slime Molds) 535
 - Division ***Acrasiomycota*** (Cellular Slime Molds) 535
 - Division ***Oomycota*** 535
- 26 **The Algae** 540
- Distribution of Algae 541
 - Classification of Algae 541
 - Ultrastructure of the Algal Cell 542
 - Algal Nutrition 543
 - Structure of the Algal Thallus (Vegetative Form) 543
 - Algal Reproduction 543
 - Characteristics of the Algal Divisions 544
 - Chlorophyta*** (Green Algae) 544
 - Charophyta*** (Stoneworts/Brittleworts) 546
 - Euglenophyta*** (Euglenoids) 546
 - Chrysophyta*** (Golden-Brown and Yellow-Green Algae; Diatoms) 547
 - Phaeophyta*** (Brown Algae) 548
 - Rhodophyta*** (Red Algae) 548
 - Pyrrhophyta*** (Dinoflagellates) 549
- 27 **The Protozoa** 553
- Distribution 554
 - Importance 554
 - Morphology 555
 - Nutrition 556
 - Encystment and Excystment 556
 - Locomotory Organelles 556
 - Reproduction 556
 - Classification 557
 - Representative Types 557
 - Phylum ***Sarcomastigophora*** 558
 - Phylum ***Labyrinthomorpha*** 561
 - Phylum ***Apicomplexa*** 561
 - Phylum ***Microsporida*** 561
 - Phylum ***Ascetospora*** 562
 - Phylum ***Myxozoa*** 562
 - Phylum ***Ciliophora*** 562

PART VII

The Nature of Symbiotic Associations

28 Symbiotic Associations: Commensalism, Mutualism, and the Normal Microbiota of the Human Body 565

- Types of Symbiosis, Functions, and Examples 566
 - Commensalism 566
 - Mutualism 566
- Gnotobiotic Animals 571
- Distribution of the Normal Microbiota of the Human Body 573
 - Skin 573
 - Nose and Nasopharynx 575
 - Oropharynx 576
 - Respiratory Tract 576
 - Oral Cavity (Mouth) 576
 - Eye 576
 - External Ear 576
 - Stomach 576
 - Small Intestine 577

- Large Intestine (Colon) 577
- Genitourinary Tract 577

29 Symbiotic Associations; Parasitism, Pathogenicity and Resistance 580

- Host-Parasite Relationships (Parasitism) 581
- Determinants of Infectious Disease 582
 - Transmissibility of the Pathogen 584
 - Attachment and Colonization by the Pathogen 584
 - Invasion of the Pathogen 584
 - Growth and Multiplication of the Pathogen 585
 - Toxicity 586
- General or Nonspecific Host Immune Defense Mechanisms 591
 - General Barriers 592
 - Physical Barriers 594
 - Chemical Barriers 595
 - Biological Barriers 597

PART VIII

The Fundamentals of Immunology

30 The Immune Response: Antigens and Antibodies 605

- Nonspecific Resistance 607
- Specific Immunity 607
 - Acquired Immunity 607
- Origin of Lymphocytes 607
- Function of Lymphocytes 609
- Antigens 609
 - Haptens 610
- Antibodies 611
 - Immunoglobulin Structure 611
 - Immunoglobulin Function 613
 - Immunoglobulin Classes 614
- Diversity of Antibodies 615
- Specificity of Antibodies 620
- Sources of Antibodies 621
 - Immunization 621
 - Hybridomas 622
- Catalytic Antibodies 624

- B-Cell Biology 633
 - B-Cell Activation 633
- T-Cell Biology 635
 - T-Cell Antigen Receptors 635
 - Major Histocompatibility Complex (MHC) Molecules 635
 - Regulator T Cells 637
 - Acquired Immune Tolerance 639
 - Effector Cells 639
- Superantigens 642
- Hypersensitivities 643
 - Type I Hypersensitivity 643
 - Type II Hypersensitivity 644
 - Type III Hypersensitivity 644
 - Type IV Hypersensitivity 646
- Autoimmune Diseases 646
- Transplantation (Tissue) Rejection 648
- Immunodeficiencies 649
- Human Blood Types 650
- Cell-Associated Differentiation Antigens (CDs) 651

31 The Immune Response: Chemical Mediators, B- and T-Cell Biology, and Immune Disorders 626

- Cytokines 627
 - Mediators of Natural or Nonspecific Immunity to Microorganisms 628
 - Activators of Effector Cells 631
 - Mediators of Mature Cell Activation, Growth, and Differentiation 631
 - Mediators of Immature Cell Growth and Differentiation 632
 - Interleukins 8 Through 16 632

32 The Immune Response: Antigen-Antibody Reactions 654

- Antigen-Antibody Binding 655
 - Antigen-Antibody Reactions in the Animal Body (In Vivo) 656
 - The Complement System 656
 - Toxin Neutralization 659
 - Viral Neutralization 659
 - Adherence Inhibiting Antibodies 659
 - Antibody-Dependent Cell-Mediated Cytotoxicity 659
 - IgE and Parasitic Infections 661
 - Opsonization 661

Inflammation	662	Immunodiffusion	668
Immune Complex Formation	662		671
Antigen-Antibody Reactions In Vitro	663	Immunofluorescence	671
Agglutination	663	Immunoprecipitation	672
Complement Fixation	666	Neutralization	672
Enzyme-Linked Immunosorbent Assay	666	Radioimmunoassay	673
		Serotyping	674

PART IX

Microbial Diseases and Their Control

33 Antimicrobial Chemotherapy 677

The Development of Chemotherapy	678
General Characteristics of Antimicrobial Drugs	679
Determining the Level of Antimicrobial Activity	681
Dilution Susceptibility Tests	681
Disk Diffusion Tests	681
Measurement of Drug Concentrations in the Blood	681
Mechanisms of Action of Antimicrobial Agents	682
Factors Influencing the Effectiveness of Antimicrobial Drugs	684
Antibacterial Drugs	684
Sulfonamides or Sulfa Drugs	684
Quinolones	686
Penicillins	686
Cephalosporins	688
The Tetracyclines	689
Aminoglycoside Antibiotics	689
Erythromycin and Other Macrolides	689
Chloramphenicol	689
Drug Resistance	690
Mechanisms of Drug Resistance	690
The Origin and Transmission of Drug Resistance	690
Antifungal Drugs	692
Antiviral Drugs	693

34

	702
Microscopy	702
Growth and Biochemical Characteristics	702
Rapid Methods of Identification	712
Immunologic Techniques	712
Bacteriophage Typing	714
Molecular Methods	714
Susceptibility Testing	717
Computers in Clinical Microbiology	717

35 The Epidemiology of Infectious Disease

Epidemiological Terminology	722
Measuring Frequency: The Tools of Epidemiologists	722
Infectious Disease Epidemiology	723
Recognition of an Infectious Disease in a Population	723
Correlation with a Single Causative Agent	724

Recognition of an Epidemic	724
The Infectious Disease Cycle: Story of a Disease	727
What Pathogen Caused the Disease?	727
What Was the Source and/or Reservoir of the Pathogen?	727
How Was the Pathogen Transmitted?	728
Why Was the Host Susceptible to the Pathogen?	731
How Did the Pathogen Leave the Host?	731
Virulence and the Mode of Transmission	731
The Emergence of New Diseases	732
Control of Epidemics	732
The Role of the Public Health System: Epidemiological Guardian	734
Nosocomial Infections	734
Source	734
Control, Prevention, and Surveillance	735
The Hospital Epidemiologist	735

36 Human Diseases Caused by viruses 738

Airborne Diseases	739
Chickenpox (Varicella) and Shingles (Zoster)	739
Influenza (Flu)	740
Measles (Rubeola)	741
Mumps	742
Respiratory Syndromes and Viral Pneumonia	743
Rubella (German Measles)	743
Smallpox (Variola)	744
Arthropod-Borne Diseases	744
Colorado Tick Fever	744
Yellow Fever	745
Direct Contact Diseases	746
Acquired Immune Deficiency Syndrome (AIDS)	746
Cold Sores	752
Common Cold	753
Cytomegalovirus Inclusion Disease	754
Genital Herpes	755
Human Herpesvirus 6 Infections	756
Human Parvovirus B 19 Infections	756
Leukemia	756
Mononucleosis (Infectious)	757
Rabies	757
Viral Hepatitis	758
Food-Borne and Waterborne Diseases	760
Gastroenteritis (Viral)	760
Hepatitis A	761
Hepatitis E	761
Poliomyelitis	761
Slow Virus Diseases	762
Other Diseases	762
Warts	762

37 Human Diseases Caused Primarily by Gram-Positive and Gram-Negative Bacteria 766

- Airborne Diseases 767
 - Diphtheria 767
 - Legionnaires' Disease and Pontiac Fever 768
 - Meningitis 769
 - Mycobacterium** avium-*M. intracellulare* Pneumonia 769
 - Pertussis 770
 - Streptococcal Diseases 770
 - Tuberculosis 773
- Arthropod-Borne Diseases 775
 - Lyme Disease 775
 - Plague 777
- Direct Contact Diseases 777
 - Anthrax 777
 - Bacterial Vaginosis 779
 - Cat-Scratch Disease 779
 - Chancroid 779
 - Gas Gangrene or Clostridial Myonecrosis 779
 - Gonorrhea 780
 - Leprosy 780
 - Peptic Ulcer Disease and Gastritis 781
 - Staphylococcal Diseases 782
 - Syphilis 786
 - Tetanus 788
 - Tularemia 789
- Food-Borne and Waterborne Diseases 789
 - Cholera 789
 - Botulism 792
 - Campylobacter jejuni Gastroenteritis 792
 - Salmonellosis 792
 - Shigellosis 793
 - Staphylococcal Food Poisoning 793
 - Traveler's Diarrhea and *Escherichia coli* Infections 793**
 - Typhoid Fever 794
- Sepsis and Septic Shock 794

38 Human Diseases Caused by Other Bacteria (Chlamydiae, Mycoplasmas, Rickettsias); Dental and Nosocomial Infections 799

- Chlamydial Diseases 800
 - Chlamydial Pneumonia 800

- Inclusion Conjunctivitis 800
- Lymphogranuloma Venereum 801
- Nongonococcal Urethritis 801
- Psittacosis (Ornithosis) 801
- Trachoma 802
- Mycoplasmal Diseases 802
 - Genitourinary** Diseases 802
 - Primary Atypical Pneumonia 802
- Rickettsial Diseases (Rickettsioses) 803
 - Ehrlichiosis 803
 - Epidemic (Louse-Borne) Typhus 804
 - Endemic (Murine) Typhus 804
 - Q Fever 804
 - Rocky Mountain Spotted Fever 805
- Dental Infections 805
 - Dental Plaque 805
 - Dental Decay (Caries) 807
 - Periodontal Disease 807
- Nosocomial Infections 808
 - Bacteremia 808
 - Bum Wounds 808
 - Respiratory Tract Infections 809
 - Surgical Site Infections 809
 - Urinary Tract Infections 809
 - Miscellaneous Infections 809

39 Human Diseases Caused by Fungi and Protozoa 811

- Fungal** Diseases 812
 - Superficial Mycoses 813
 - Cutaneous Mycoses 813
 - Subcutaneous Mycoses 815
 - Systemic Mycoses 816
 - Opportunistic Mycoses 818
- Protozoan Diseases 821
 - Amebiasis 821
 - Cryptosporidiosis 822
 - Freshwater Amoeba Diseases 823
 - Giardiasis 823
 - Malaria 824
 - Hemoflagellate Diseases 826
 - Toxoplasmosis 828
 - Trichomoniasis 828

PART X

Microorganisms and the Environment

40 Microorganisms as Components of Ecosystems 831

- Microorganisms and the Structure of Ecosystems 832
- The Physiological State of Microorganisms in Ecosystems 834
- Nutrient Cycling Processes 836
 - Carbon Cycle 837
 - Sulfur Cycle 837
 - Nitrogen Cycle 837
 - Other Cycling Processes 839
- Interactions between Microorganisms and Metals 840
- Interactions in Substrate Use 842
- Organic Substrate Use by Microorganisms 843
- Disease-Causing Microorganisms-Survival and Fate 844

- Genetically Engineered Microorganisms-Fate and Effects 845
- Extreme Environments 846
- Methods Used in Environmental Studies 847

41 Marine and Freshwater Environments 852

- The Nature of Marine and Freshwater Environments 853
 - Nutrient Concentrations 853
 - Gradients 853
 - Surfaces and Biofilms 855
 - Microbial Mats 856
- The Microbial Community in Marine and Freshwater Environments 851**
 - Important Microorganisms 858
 - The Marine Environment 860

The Freshwater Environment	865
Wastewater Treatment	868
Water and Disease Transmission	874
Water Purification	874
Microbiological Analysis of Water	876
Water and Human Diseases	879
Groundwater Quality and Home Treatment Systems	880

42 Terrestrial Environments 885

The Environments of Soil Microorganisms	886
Soil Microorganisms, Insects, and Other Animals—Contributions to Soils	887

Microorganisms and the Formation of Different Soils	889
Soil Microorganism Associations with Plants	890
The Rhizosphere and Rhizobium	892
Actinorhizae	895
Mycorrhizae	897
Tripartite and Tetrapartite Associations	899
Fungal and Bacterial Endophytes of Plants	899
Tumorigenicity of <i>Agrobacterium</i> —Genetic Applications	899
Soil Organic Matter and Soil Fertility	900
Degradation and Microorganisms—Fertility and Recalcitrance	900
Soil Microorganism Interactions with the Atmosphere	902

PART XI

Food and Industrial Microbiology

43 Microbiology of Food 907

Microorganisms and Food Spoilage	908
Intrinsic Factors	908
Extrinsic Factors	910
Food Spoilage	910
Food Preservation Alternatives	914
Filtration	914
Low or High Temperature	914
Chemicals and Radiation	915
Diseases and Foods	916
Diseases Transmitted by Foods	916
Detection of Disease-Causing Microorganisms	917
Microbiology of Fermented Foods	920
Dairy Products	920
Meat and Fish	924
Wine, Beer, and Other Fermented Alcoholic Beverages	924
Bread and Other Fermented Plant Products	926
Microorganisms as Sources of Food	928

44 Industrial Microbiology and Biotechnology 931

Industrial Microbiology and the New Biotechnology	932
Microbial Growth Processes	933
Microbial Culture	933
Medium Development and Growth Conditions	934
Strain Selection, Improvement, and Preservation	935
Major Products of Industrial Microbiology	938
Antibiotics	939

Amino Acids	940
Organic Acids	942
Biocconversion Processes	943
Molecular Biology and Biotechnology	945
Modification of Gene Expression	946
Design of Proteins and Peptides	946
Hypermutation and Evolutionary Biotechnology	947
Vectors for Product Expression	948
Other Microbial Products	949
Bioinsecticides	949
Biopolymers	951
Biosurfactants	952
Biodegradation and Its Management	952
Biodegradation Stimulation	953
Control of Biodeterioration	957
Biosensors	958
Impact of Microbial Biotechnology	960

Appendix I: A Review of the Chemistry of Biological Molecules A1

Appendix II: Common Metabolic Pathways A12

Appendix III: Classification of Bacteria According to the First Edition of Bergey's Manual of Systematic Bacteriology A21

Appendix IV: A Guide to the Location of Important Taxa in the Fourth Edition A26

Appendix V: Classification of Viruses A28
