INTRODUCTION	1
<p style="margin-left: 40px;">Scope of Probability-Necessity and Chance-Genesis of Idea of Probability-classical Definition of Mathematical Probability-Its Limitations -Short Sketch of Historical Development of Theory of Probability.</p>	
CHAPTER I	
COMPUTATION OF PROBABILITY BY DIRECT ENUMERATION OF CASES	14
<p style="margin-left: 40px;">Simple Problems Solved by Direct Application of Definition-Permutations, Arrangements and Combinations-Some Illustrative Problems-Problems for Solution.</p>	
CHAPTER II	
T HEOREMS OF TOTAL AND Compound P ROBABILITY	27
<p style="margin-left: 40px;">Mutually Exclusive or Incompatible Events-Theorem of Total Probability in Restricted and Generalized Form-Conditional Probability - Theorem of Compound Probability-Independent Events-Compound Probability of Independent Events-Problems Illustrating the Combined Use of Theorem of Total and Compound Probabilities-Problems for Solution.</p>	
CHAPTER III	
R EPEATED T R I A L S.	44
<p style="margin-left: 40px;">Independent and Dependent Trials-Bernoullian Trials-Most Probable Number of Successes-Approximate Formulas in Case of a Large Number of Trials-Markoff's Method of Continued Fractions-Problems for Solution.</p>	
CHAPTER IV	
PROBABILITIES ~ OF HYPOTHESES AND Bayes' THEOREM.	60
<p style="margin-left: 40px;">Bayes' Formula for Probability a Posteriori-Probability of Future Events - Estimation of Probabilities from Observed Frequencies-Criticism of Underlying Assumptions - Problems for Solution.</p>	
CHAPTER V	
USE OF DIFFERENCE EQUATIONS IN SOLVING PROBLEMS OF PROBABILITY	74
<p style="margin-left: 40px;">Simple Chains of Trials-Problem of Runs-Examples Requiring Use of Partial Difference Equations-Problems for Solution.</p>	
CHAPTER VI	
B E R N O U L L I' S T H EOREM	96
<p style="margin-left: 40px;">Statement and Proof of Bernoulli's Theorem-Theorem of Cantelli - Significance of Bernoulli's Theorem-Application to Games of Chance -</p>	

Experimental Verification of Bernoulli's Theorem-Appendix: Buffon's Needle Problem-Problems for Solution.

CHAPTER VII

APPROXIMATE EVALUATION OF PROBABILITIES IN BERNOULLIAN CASE . . .

Statement of Problem-Analytical Representation of Required Probability-Analysis Leading to Final Approximate Formula-Numerical Examples-Problems for Solution.

CHAPTER VIII

FURTHER CONSIDERATIONS ON GAMES OF CHANCE. . . . 1

Problems Concerning Ruin of Gamblers When Number of Games is Unlimited-stakes Equal-Case of Unequal Stakes-Probability of Ruin in Case of a Limited Number of Games-Problems for Solution.

CHAPTER IX

MATHEMATICAL EXPECTATION. 1

Stochastic Variables-Definition of Mathematical Expectation--Mathematical Expectation of Sums-Examples-Mathematical Expectation of Products-Dispersion and Standard Deviation-Dispersion of Sums - Examples-Problems for Solution.

CHAPTER X

THE LAW OF LARGE NUMBERS 1

Tshebysheff's Lemma-Law of Large Numbers-Sufficient Conditions for Its Validity-Some Experimental Results-Case of Infinite Dispersion: Theorem of Markoff-Law of Large Numbers for Identical Variables: Theorem of Khintchine-Problems for Solution.

CHAPTER XI

APPLICATION OF THE LAW OF LARGE NUMBERS 2

Poisson's Theorem-Divergence Coefficient-Lexi's and Poisson's Cases - Tschuprow's Theorem-Examples of Dependent Trials-Experimental Results for Simple Chains-Problems for Solution.

CHAPTER XII

PROBABILITIES IN CONTINUUM 23

Notion of Probability for Continuous Variables-Case of One Variable - Density of Probability-Distribution Function, Moments and Characteristic Function-Examples-Case of Two or More Variables-Geometrical Problems-Problems for Solution.

CHAPTER XIII

THE GENERAL CONCEPT OF DISTRIBUTION 26

Increasing Functions and Stieltjes' Integrals-Representation of Distribution Function by Stieltjes' Integral-Moments and Characteristic Function-Inequalities for Moments-Composition of Distribution Functions-Examples-Determination of Distribution When Its Characteristic Function Is Known-Composition of Characteristic Functions-Examples-Problems for Solution.

CHAPTER XIV

PAGE

FUNDAMENTAL	LIMIT THEOREMS	, . . .	283
Introductory Remarks-Laplace-Liapounoff's Theorem-Fundamental Lemma-Proof of Laplace-Liapounoff's Theorem-Particular Cases - Estimation of Error Term-Hypothesis of Elementary Errors-Examples Concerning Dependent Variables-Problems for Solution.			

CHAPTER XV

NORMAL DISTRIBUTION IN TWO DIMENSIONS . LIMIT THEOREM FOR SUMS OF INDEPENDENT VECTORS. ORIGIN OF NORMAL CORRELATION	308
Properties of Two-dimensional Normal Distribution-Limit Theorem for Sums of Independent Vectors-Application to Trials with Three or More Alternatives-Pearson's "x ² -Test "-Hypothetical Explanation of Normal Correlation-Problems for Solution.	

CHAPTER XVI

DISTRIBUTION OF CERTAIN FUNCTIONS OF NORMALLY DISTRIBUTED VARIABLES	331
Distribution of Sums of Squares-Distribution of Sums of Squares of Deviations from the Mean-"Student's" Distribution-Distribution of the Correlation Coefficient of a Sample-Problems for Solution.	

APPENDIX I

EULER'S SUMMATION FORMULA-STIRLING'S FORMULA-SOME DEFINITE INTE-
--

APPENDIX II

METHOD OF MOMENTS AND ITS APPLICATIONS. . .	356
Introductory Remarks-Continued Fractions Associated with Power Series—Continued Fractions Associated with $\int_a^b \frac{d\varphi(x)}{x-x}$. Properties of Denominators of Their Convergents-Equivalent Point Distributions - Tshebysheff's Inequalities-Application to Normal Distribution-Tshebysheff-Markoff's Fundamental Theorem-Application to Sums of Independent Variables.	

APPENDIX III

ON A GAUSSIAN	PROBLEM	396
Statement of the Problem-Analytical Expression for P(z) and Its Derivative-More General Recurrence Relation-Main Inequalities-Solution of the Gaussian Problem.		

TABLE OF PROBABILITY INTEGRAL.	407
INDEX 	409
