## CHAPTER 1 Introduction

*1-1 Fluids . . . . .	1
*1-2 Mechanics . . . . .	2
*1-3 Mechanical properties of fluids . . . . .	2
*1-4 Thermodynamic properties of fluids . . . . .	6

## CHAPTER 2 Dimensional Analysis

*2-1 Dimensions . . . . .	8
*2-2 Method of dimensional analysis . . . . .	9
*2-3 Determination of a complete set of dimensionless products . . . . .	12
2-4 The pi-theorem . . . . .	15
*2-5 Dimensional analysis in fluid mechanics . . . . .	18
*2-6 Scale models of fluid systems . . . . .	29
2-7 Dimensional analysis involving heat transfer . . . . .	34

## CHAPTER 3 Fluid Statics

*3-1 Fluid statics . . . . .	37
*3-2 Equation of fluid statics . . . . .	38
*3-3 Hydrostatic force on a plane surface . . . . .	41
3-4 Hydrostatic forces on a general surface. . . . .	46
3-5 Stability of submerged and floating bodies . . . . .	48
3-6 Equilibrium and stability of stratified fluids . . . . .	51
3-7 Surface tension . . . . .	54

## CHAPTER 4 Kinematics of Fluids

*4-1 Pictorial methods of description . . . . .	56
*4-2 The Lagrangian and Eulerian systems . . . . .	57
*4-3 Particle derivative. . . . .	58
*4-4 Derivative of a vector quantity . . . . .	61
*4-5 Particle acceleration . . . . .	63
*4-6 Steady flow. . . . .	66
*4-7 Moving axes . . . . .	67
*4-8 Equation of continuity . . . . .	68
4-9 Scalar product and divergence of vectors . . . . .	71
4-10 Other topics of fluid kinematics . . . . .	73

---

\*Sections recommended for a short terminal course.

**CHAPTER 5 Dynamics of Frictionless Incompressible Flow**

*5-1 Pressure in a frictionless flow . . . . .	74
*5-2 The momentum equations for frictionless flow . . . . .	74
*5-3 Incompressible flow . . . . .	77
*5-4 Fluid in rigid-body motion . . . . .	77
*5-5 Bernoulli's equation . . . . .	81
*5-6 Comments on application of Bernoulli's equation . . . . .	85
*5-7 One-dimensional analysis . . . . .	87

**CHAPTER 6 Irrotational Flow**

6-1 Rotation of fluid elements . . . . .	93
6-2 Velocity potential . . . . .	96
6-3 Irrotational flow of homogeneous frictionless fluids . . . . .	100
6-4 Superposition of solutions of Laplace equation . . . . .	103
6-5 Dynamic pressure and lift . . . . .	109
6-6 Methods of approximate solution of Laplace equation . . . . .	111
6-7 Comparison with observations . . . . .	115

**CHAPTER 7 Streamlines and Stream Functions**

7-1 Equations of streamlines . . . . .	118
7-2 Stream function of two-dimensional incompressible flow . . . . .	119
7-3 Solution of two-dimensional irrotational incompressible flow . . . . .	123
7-4 Graphical solution of two-dimensional irrotational flow . . . . .	125
7-5 Stokes' stream function . . . . .	127

**CHAPTER 8 Vorticity**

8-1 Introduction . . . . .	131
8-2 Vortex lines and vortex tubes . . . . .	133
8-3 Circulation . . . . .	136
8-4 Role of vorticity in lift and drag . . . . .	140
8-5 Rate of change of vorticity . . . . .	142

**CHAPTER 9 The Momentum Theorem**

*9-1 Motion of a system of particles . . . . .	147
*9-2 Momentum theorem in one-dimensional analysis . . . . .	157
9-3 Vector product and curl of vectors . . . . .	162
9-4 Theorem of moment of momentum . . . . .	165

**CHAPTER 10 Flow with Gravity**

10-1 Fluid of constant density with prescribed boundaries . . . . .	171
10-2 Normalization of equations . . . . .	172
10-3 The Froude number . . . . .	173
10-4 Speed of small waves in shallow channels . . . . .	175
*10-5 Characteristics of channel flow . . . . .	180
10-6 Surface profiles of steady channel flows . . . . .	183
10-7 Surface waves of small amplitude . . . . .	187

**CHAPTER 11 Flow of Viscous Fluids**

*11-1 Newtonian fluids . . . . .	193
*11-2 Simple laminar flow systems of viscous fluids . . . . .	193
11-3 Cartesian tensors . . . . .	199
11-4 Properties of Cartesian tensors . . . . .	204
11-5 Stress at a point . . . . .	206
11-6 The rate of strain at a point. . . . .	210
11-7 Navier-Stokes equations . . . . .	213
11-8 Navier-Stokes equations in cylindrical coordinates . . . . .	218
11-9 The Reynolds number . . . . .	223
11-10 Fluid flow with low Reynolds number . . . . .	225

**CHAPTER 12 Two-Dimensional Laminar Boundary Layers**

*12-1 Introduction . . . . .	232
*12-2 The boundary-layer approximations . . . . .	234
12-3 The boundary-layer equations . . . . .	237
12-4 The flat plate . . . . .	239
*12-5 Application of momentum theorem . . . . .	243
12-6 The Kármán-Pohlhausen momentum integral equation . . . . .	245
12-7 The Thwaites method . . . . .	248
12-8 Separation and other remarks . . . . .	250

**CHAPTER 13 Turbulent Flow**

*13-1 Necessity of study of turbulence. . . . .	253
13-2 Origin of turbulence . . . . .	254
13-3 The Reynolds equations of motion . . . . .	256
*13-4 The mixing-length hypothesis . . . . .	263
*13-5 Turbulent flow in circular pipes . . . . .	271
13-6 Empirical formulas for pipes and open-channels . . . . .	275
*13-7 Turbulent boundary layer . . . . .	283

**CHAPTER 14 Thermodynamics and Fluid Flows**

14-1 Introduction . . . . .	287
14-2 Equation of state . . . . .	288
14-3 First law of thermodynamics . . . . .	290
14-4 Specific internal energy . . . . .	293
14-5 The energy equation . . . . .	294
14-6 Specific enthalpy . . . . .	297
14-7 Isentropic relations . . . . .	299
14-8 The second law of thermodynamics. . . . .	300
14-9 Entropy and elementary compressible flows . . . . .	303
14-10 The differential equation of state . . . . .	304

**CHAPTER 15 One-Dimensional Steady Compressible Flow**

*15-1 Introduction . . . . .	306
*15-2 The speed of sound . . . . .	306
*15-3 The stagnation quantities . . . . .	311

\*15-4 Isentropic nozzle flows . . . . . 315  
 \*15-5 Shock waves . . . . . 320  
 \*15-6 Normal shock relations . . . . . 323  
 \*15-7 Nozzle flow with normal shocks . . . . . 325  
 15-8 Thrust . . . . . 329  
 15-9 Effects of friction and energy exchange in tubes of constant area. . . . . 331

**CHAPTER 16 Shock Waves and Expansion Fans**

16-1 General character of supersonic flow . . . . . 333  
 16-2 Oblique shocks . . . . . 335  
 16-3 Weak oblique shocks . . . . . 342  
 16-4 The Prandtl-Meyer expansion fan . . . . . 344  
 16-5 Approximate formula for small deflections . . . . . 350  
 16-6 Applications to nozzle flows . . . . . 352

**CHAPTER 17 Similarity Laws in Compressible Flows**

17-1 The idea of similarity . . . . . 353  
 17-2 The potential equation for compressible flows . . . . . 355  
 17-3 General comments on the potential equation . . . . . 358  
 17-4 Incompressible flows . . . . . 359  
 17-5 Subsonic similarity . . . . . 360  
 17-6 Comments on subsonic similarity . . . . . 362  
 17-7 Transonic similarity . . . . . 363  
 17-8 Supersonic similarity . . . . . 364

**APPENDIX Mechanical Properties of Some Fluids . . . . . 366**

**ANSWERS TO PROBLEMS . . . . . 368**

**I N D E X . . . . . 3 7 3**
