Preface	vii
List of Algorithms	xviii
Notation	xxi
1 INTRODUCTION	1
1.1 What is Molecular Simulation?	1
1.1.1 The Monte Carlo Method	3
1.1.2 Molecular Dynamics	4
1.2 Progress in Molecular Simulation	5
1.2.1 Early Work on Hard Spheres and Atoms	5
1.2.2 Small Non-Polar Molecules	6
1.2.3 Polar Molecules and Ions	6
1.2.4 Chain Molecules and Polymers	7
1.2.5 Ensembles for Molecular Simulation	8
1.2.6 Phase Equilibria	9
1.2.7 Many-Body Interactions	10
1.2.8 Non-Equilibrium Molecular Dynamics	11
1.2.9 Molecular Simulation and Object-Orientation	11
References	11
2 THEORETICAL FOUNDATIONS	19
2.1 Basic Statistical Mechanics	20

2.1.1	Ensembles	20
2.1.2	Simple Thermodynamic Averages	23
	(i) Energy	23
	(ii) Temperature	23
	(iii) Pressure	24
	(iv) Excess Chemical Potential	24
2.1.3	Thermodynamic Properties from Fluctuations	25
	(i) Constant-Volume Specific Heat Capacity	26
	(ii) Constant-Pressure Specific Heat Capacity	27
	(iii) Thermal Pressure Coefficient	27
	(iv) Isothermal Compressibility	28
	(v) Thermal Expansion Coefficient	29
2.1.4	Transport Coefficients	30
	(i) Diffusion	30
	(ii) Shear Viscosity	31
	(iii) Thermal Conductivity	31
2.2	Particle Dynamics	32
2.2.1	Motion of Unconstrained Particles	32
2.2.2	Motion of Constrained Particles	33
	(i) Holonomic and Non-Holonomic Constraints	33
	(ii) Consequences of Constraints on Particles	34
	(iii) Lagrange Equations of Motion	34
	(iv) Hamilton Equations of Motion	38
	(v) Gauss's Principle of Least Constraint	40
2.2.3	The Liouville Equation	42
2.2.4	The Virial Theorem	43
2.3	Summary	44
	References	45
3	INTERMOLECULAR POTENTIALS	47
3.1	Calculation of the Potential Energy	48
3.2	Intermolecular Forces	48
	3.2.1 Types of Intermolecular Forces	48
	3.3.2 Quantum Theory of Intermolecular Potentials	49
3.3	Pairwise Potentials for Atoms and Simple Molecules	51
	3.3.1 The Hard-Sphere Potential	52
	3.3.2 Soft-Sphere Potentials	52
	3.3.3 Hard-Sphere + Attractive Term Potentials	53
	3.3.4 Repulsion + Dispersion Pair Potentials	

	for Non-Polar Molecules	55
	3.3.5 General Refinement of Repulsion and Dispersion Models	62
	3.3.6 Ab Initio Potentials	64
3.4	Contributions to Molecular Interactions	65
	3.4.1 Intermolecular Non-Polar Potentials	65
	3.4.2 Intermolecular Ionic and Polar Potentials	66
	3.4.3 Intermolecular Hydrogen-Bond Potentials	69
	3.4.4 Intramolecular Bond Potentials	69
	3.4.5 Intramolecular Angle Bending Potentials	71
	3.4.6 Intramolecular Out-of-Plane Bending Potential	71
	3.4.7 Intramolecular Torsional Potentials	72
	3.4.8 Intramolecular Cross Terms	72
3.5	Simple <b>Pairwise</b> Potentials for Molecules	73
3.6	<b>Pairwise</b> Potentials from Molecular Mechanics	76
	3.6.1 Potentials from Molecular Mechanics	77
	3.6.2 Comparison of Molecular Mechanics Potentials	83
	3.6.3 Molecular Mechanics Potentials and Molecular Simulation	85
3.7	Many-Body Interactions for Atoms	86
	3.7.1 Three-Body Dispersion Potential for Atoms	88
	3.7.2 Three-Body Repulsion Potentials for Atoms	100
	3.7.3 Relative Importance of Three-Body Dispersion and Repulsion	101
	3.7.4 Four- and Higher-Body Interactions between Atoms	104
3.8	Many-Body Interactions for Molecules	104
3.9	Ab Initio Calculations	109
	3.9.1 Hartree-Fock Method	109
	3.9.2 Density Functional Theory	111
	3.9.3 The Car-Parrinello Method	113
3.10	Summary	114
	References	115
4	CALCULATING MOLECULAR INTERACTIONS	131
	4.1 Calculation of Short-Range Interactions	133
	4.1.1 Naive Energy and Force Calculations	133
	4.1.2 Periodic Boundary Conditions and Minimum Image Convention	134

4.1.3	Long-Range Corrections to Periodic Boundary Conditions	136
4.1.4	Neighbour List	137
4.1.5	Linked-Cells	141
4.1.6	Look-Up Table	145
4.1.7	Comparison of Computational Efficiency	147
4.2	Calculation of Long-Range Interactions	148
4.2.1	The Ewald Sum	150
4.2.2	The Reaction Field Method	156
4.2.3	Particle-Particle and Particle-Mesh (PPPM) Methods	162
4.2.4	Tree-based Methods	169
(i)	The Barnes-Hut Algorithm	170
(ii)	The Fast Multipole Method	172
4.2.5	Comparison of Computational Efficiency	179
4.3	Summary	180
	References	180
5	MONTE CARLO SIMULATION	187
5.1	Basic Concepts	188
5.1.1	Background	188
5.1.2	Metropolis Sampling and Markov Chains	189
5.2	Application to Molecules	193
5.2.1	Rigid Molecules	193
5.2.2	Small Flexible Molecules	194
5.2.3	Polymers	194
(i)	The Reptation or Slithering Snake Algorithm	194
(ii)	The Kink-Jump Algorithm	196
(iii)	The Pivot Algorithm	197
5.3	Some Recent Developments	197
5.3.1	Configurational Bias Monte Carlo	198
(i)	Lattice Chains	198
(ii)	Flexible Chains	200
5.3.2	Cluster Moves	206
5.4	Summary	210
	References	210

6	INTEGRATORS FOR MOLECULAR DYNAMICS	215
6.1	Integrating the Equations of Motion	216
6.2	Gear Predictor-Corrector Methods	217
6.2.1	The Basic Gear Algorithm	217
6.2.2	Other Representations of the Gear Algorithm	223
6.3	Verlet Predictor Methods	223
6.3.1	The Original Verlet Algorithm	224
6.3.2	Leap-Frog Verlet Algorithm	226
6.3.3	Velocity-Verlet Algorithm	228
6.3.4	<b>Beeman</b> Modification	231
6.4	Comparison of Integrators	233
6.5	Integrators for Molecules	234
6.5.1	Small Molecules	234
6.5.2	Large Molecules	236
	(i) The SHAKE Algorithm	239
	(ii) The RATTLE Algorithm	246
	(iii) Application of Gauss's Principle of Least Constraint	248
	(iv) Matrix Inversion Method	254
	(v) Other Methods	255
6.6	Summary	256
	References	257
7	NON-EQUILIBRIUM MOLECULAR DYNAMICS	261
7.1	Synthetic NEMD Algorithms	262
7.1.1	Shear Viscosity	264
7.1.2	Self Diffusion	267
7.1.3	Thermal Conductivity	269
7.2	Application of NEMD Algorithms to Molecules	270
7.3	Application of NEMD Algorithms to Mixtures	271
7.4	Comparison with Equilibrium Molecular Dynamics	271
7.5	Summary	273
	References	273
8	MOLECULAR SIMULATION OF ENSEMBLES	281
8.1	Monte Carlo Methods	282
8.1.1	Canonical (NVT) Ensemble	283

8.1.2	Isobaric-Isothermal (NPT) Ensemble	287
8.1.3	Grand Canonical ( $\mu VT$ ) Ensemble	293
8.1.4	Microcanonical (NVE) Ensemble	297
8.2	Molecular Dynamics	301
8.2.1	Microcanonical (NVE) Ensemble	301
8.2.2	Canonical (NVT) Ensemble	304
	(i) Simple Velocity Scaling	305
	(ii) Heat-Bath Coupling	307
	(iii) Andersen Thermostat	308
	(iv) Nose Thermostat	310
	(v) Nod-Hoover Equations	311
	(vi) Constraint Methods	314
8.2.3	Isobaric-Isoenthalpic (NPH) Ensemble	315
	(i) Andersen's Algorithm	315
	(ii) Constraint Methods	318
8.2.4	Isothermal-Isobaric (NPT) Ensemble	319
	(i) Hybrid Molecular Dynamics/Monte Carlo	319
	(ii) Extension of the Nose-Hoover Equations	321
	(iii) Constraint Methods	323
8.2.5	Grand Canonical ( $\mu VT$ ) Ensemble	324
	(i) Lupkowski-van Swol Method	325
	(ii) Çagin-Pettitt Method	325
	(iii) Lo-Palmer Method	327
	(iv) Beuter-van Gunsteren Method	330
	(v) Parallel Algorithm	331
8.3	Summary	334
	References	334
9	MOLECULAR SIMULATION OF PHASE EQUILIBRIA	339
9.1	Calculating the Chemical Potential	341
9.2	Monte Carlo Grand Canonical Gibbs Ensemble	344
9.3	Molecular Dynamics Grand Canonical Gibbs Ensemble	348
	9.3.1 Lo-Palmer Method	349
	9.3.2 Kotelyanskii-Hentschke Method	352
	9.3.3 Baranyai-Cummings Method	355
9.4	NPT + Test Particle	357
9.5	Gibbs-Duhem Integration	357
9.6	Thermodynamic Scaling	365

9.6.1	Temperature and Density Monte Carlo	365
9.6.2	Thermodynamic Scaling Gibbs Ensemble Monte Carlo	366
9.7	Pseudo Ensemble Methods	368
9.8	Histogram Re-weighting Algorithms	370
9.8.1	Grand canonical Monte Carlo	371
9.8.2	Isothermal-Isobaric Monte Carlo	373
9.9	Finite Size Scaling	374
9.10	Summary	374
	References	375
10	MOLECULAR SIMULATION AND OBJECT-ORIENTATION	383
10.1	Fundamental Concepts of Object-Orientation	385
10.1.1	Classes and Objects	385
10.1.2	Abstraction and Encapsulation	386
10.1.3	Methods and Message Passing	387
10.1.4	Inheritance	388
10.1.5	Aggregation	389
10.1.6	Association	390
10.1.7	Polymorphism	393
10.2	Application of Object-Orientation to the Microcanonical Molecular Dynamics Simulation of Lennard-Jones Atoms	393
10.2.1	Object-Oriented Analysis and Design	393
10.2.2	Detailed Class Description	402
	(i) Simulation	403
	(ii) Molecular-Dynamics	404
	(iii) Ensemble	405
	(iv) NVE_Ensemble	407
	(v) Atom	408
	(vi) L-J_Atom	410
	(vii) Force	411
	(viii) LJ_Force	412
	(ix) Integrator	413
	(x) Gear-Predictor-Corrector	414
	(xi) Auxiliary Methods	415
10.2.3	Object-Oriented Programming in C++	416
	(i) Code for the main() Function	416
	(ii) Code for the Simulation Class	417

	(iii) Code for the Molecular-Dynamics Class	418
	(iv) Code for the Ensemble Class	425
	(v) Code for the <b>NVE_Ensemble</b> Class	429
	(vi) Code for the Atom Class	434
	(vii) Code for the <b>LJ_Atom</b> Class	439
	(viii) Code for the Force Class	441
	(ix) Code for the <b>LJ_Force</b> Class	441
	(x) Code for the Integrator Class	445
	(xi) Code for the Gear-Predictor-Corrector Class	445
	(xii) Code for Auxiliary Methods	449
10.3	Application of Object-Orientation to the Microcanonical Monte Carlo Simulation of Lennard-Jones Atoms	452
	10.3.1 Object-Oriented Analysis and Design	452
	10.3.2 Detailed Class Description	458
	(i) Simulation	459
	(ii) Monte-Carlo	460
	(iii) Ensemble	461
	(iv) <b>NVE_Ensemble</b>	463
	(v) Atom	464
	(vi) <b>LJ_Atom</b>	466
	(vii) Energy	467
	(viii) <b>LJ_Energy</b>	468
	(ix) Auxiliary Methods	468
	10.3.3 Object-Oriented Programming in C++	469
	(i) Code for the main() Function	469
	(ii) Code for the Simulation Class	470
	(iii) Code for the Monte-Carlo Class	471
	(iv) Code for the Ensemble Class	478
	(v) Code for the NVE_Ensemble Class	482
	(vi) Code for the Atom Class	485
	(vii) Code for the LJ_Atom Class	489
	(viii) Code for the Energy Class	489
	(ix) Code for the LJ_Energy Class	489
	(x) Code for the Auxiliary Methods	494
10.4	Combined Molecular Dynamics and Monte Carlo Program for Lennard-Jones Atoms in the Microcanonical Ensemble	494
	10.4.1 Object-Oriented Analysis	494
	10.4.2 Object-Oriented programming in C++	495
10.5	Extensions	497

10.5.1 Other Ensembles	497
10.5.2 Other Ensembles and Other Potentials	499
10.5.3 Other Ensembles, Other Potentials and Molecules	500
10.6 Summary	501
References	501
<b>APPENDICES</b>	<b>503</b>
<b>A SOFTWARE USER'S GUIDE</b>	<b>503</b>
A.1 C++ Code for the Molecular Dynamics Simulation of Lennard-Jones atoms in the Microcanonical Ensemble (📄 a:\md)	503
A.2 C++ Code for the Monte Carlo Simulation of Lennard-Jones atoms in the Microcanonical Ensemble (📄 a:\mc)	505
A.3 C++ Code for the Combined Monte Carlo and Molecular Dynamics Simulation Program for Lennard-Jones Atoms in the Microcanonical Ensemble (📄 a:\mcmd)	506
A.4 Compilation	507
<b>B SIMULATION RESOURCES</b>	<b>509</b>
B.1 Journals	509
B.2 Books	510
B.3 Web Sites	512
