CONTENTS

1 BASIC PRINCIPLES OF ELECTRON PARAMAGNETIC RESONANCE 1

1.1 Introduction 1
1.2 Historical Perspective 3
1.3 A Simple EPR Spectrometer 4
1.4 Scope of the EPR Technique 7
1.5 Energy Flow in Paramagnetic Systems 12
1.6 Quantization of Angular Momenta 13
1.7 Relation Between Magnetic Moments and Angular Momenta 15
1.8 Magnetic-Field Quantities and Units 16
1.9 Magnetic-Dipole Moments 18
1.10 Magnetic Energies and States 20
1.11 Interaction of Magnetic Dipoles with Electromagnetic Radiation 21
1.12 Characteristics of the Spin Systems 23
1.12.1 The g Factor 23
1.12.2 Characteristics of Dipolar Interaction 27
References 28
Notes 29
Further Reading 30
Problems 31

2 MAGNETIC INTERACTIONS BETWEEN PARTICLES 33

2.1 Introduction 33
2.2 Theoretical Considerations of the Hyperfine Interaction 35
2.3 Angular-Momentum and Energy Operators 37
2.3.1 Spin Operators and Hamiltonians 38
2.3.2 Electronic and Nuclear Zeeman Interactions 40
2.3.3 Spin Hamiltonian Including Isotropic Hyperfine Interaction 43
2.4 Energy Levels of a System with One Unpaired Electron ($S = \frac{1}{2}$) and One Nucleus with $I = \frac{1}{2}$ 45
2.5 Energy Levels of a System with $S = \frac{1}{2}$ and $I = 1$ 48
2.6 Signs of Isotropic Hyperfine Coupling Constants 50
2.7 Dipolar Interactions Between Electrons 51
References 52

Problems 53

3 ISOTROPIC HYPERFINE EFFECTS IN EPR SPECTRA 55

3.1 Introduction 55
3.2 Hyperline Splitting from Protons 56
3.2.1 Single Set of Equivalent Protons 56
3.2.2 Multiple Sets of Equivalent Protons 60
3.3 Hyperfine Splittings from Other Nuclei with $I = 1/2$ 65
3.4 Hyperfine Splittings from Nuclei with $I > 1/2$ 66
3.5 Useful Rules for the Interpretation of EPR Spectra 71
3.6 Higher-order Contributions to Hyperfine Splittings 72
3.7 Other Problems Encountered in EPR Spectra of Free Radicals 74
References 74
Notes 75

Problems 75

4 ZEEMAN ENERGY (g) ANISOTROPY 80

4.1 Introduction 80
4.2 Systems with High Local Symmetry 83
4.3 Systems with Rhombic Local Symmetry 86

4.4 Construction of the g Matrix 87
4.5 Symmetry-Related Sites 91
4.6 EPR Line Intensities 93
4.7 Statistically Randomly Oriented Solids 94
4.8 Spin–Orbit Coupling and the Λ Matrix 100
References 105
Notes 106

Problems 108

5 HYPERFINE (A) ANISOTROPY 112

5.1 Introduction 112
5.2 Origin of the Anisotropic Part of the Hy perfine Interaction 114
5.3 Determination and Interpretation of the Hyperfine Matrix 116
5.3.1 The Anisotropic Breit–Rabi Case 116
5.3.2 The Case of Dominant Electron Zeeman Energy 118
5.3.2.1 General Case 120
5.3.2.2 The Case of $B \ll B_{hf}$ 122
5.3.2.3 The Case of $B \gg B_{hf}$ 134
5.4 Combined g and Hyperfine Anisotropy 136
5.5 Multiple Hyperfine Matrices 137
5.6 Systems with $I > \frac{1}{2}$ 137
5.7 Hyperfine Powder Lineshapes 139

Problems 145

6 SYSTEMS WITH MORE THAN ONE UNPAIR E D ELECTRON 151

6.1 Introduction 151
6.2 Spin Hamiltonian for Two Interacting El ectrons 152
6.2.1 Electron-Exchange Interaction 153
6.2.2 Electron-Electron Dipole Interact ion 155
6.3 Systems with $S = 1$ (Triplet States) 157
6.3.1 Spin Energies and Eigenstates 158

6.3.2 "$\Delta M_S = \pm 2$" Transitions 165
6.3.3 Randomly Oriented Triplet Systems 166
6.3.4 Photoexcited Triplet-State Entities 171
6.3.5 Thermally Accessible Triplet-State Entities 175
6.3.6 Ground-State Triplet Entities 177
6.3.6.1 Carbenes and Nitrenes 178
6.3.6.2 Dianions of Symmetric Aromatic Hydrocarbons 180
6.3.6.3 Inorganic Triplet Species 181
6.4 Biradicals 182
6.5 Systems with $S > 1$ 186
6.6 High-Spin and High-Field Energy Terms 186
6.7 The Spin Hamiltonian: A Summing Up 188

9 THE INTERPRETATION OF EPR PARAMETERS 239

9.1 Introduction 239
9.2 π-Type Organic Radicals 240
9.2.1 Anions and Cations of Benzene and Some of Its Derivatives 245
9.2.2 Anions and Cations of Polyacenes 247
9.2.3 g Factors of π Radicals 248
9.2.4 Origin of Proton Hyperfine Splittings 248
9.2.5 Sign of the Proton Hyperfine Splitting Constant 251
9.2.6 Methyl-Proton Hyperfine Splittings and Hyperconjugation 254
9.2.7 Hyperfine Splitting from Nuclei Other than Protons 255
9.2.8 One-Dimensional Chain Paramagnets 258
9.3 σ-Type Organic Radicals 259
9.4 Triplet-State Species and Biradicals 261
9.5 Inorganic Radicals 262
9.6 Electrically Conducting Systems 266
9.6.1 Metals 266
9.6.2 Metals in Ammonia and Amine Solutions 267
9.6.3 Semiconductors 268
9.7 Techniques for Structural Estimates from EPR Data 271
9.7.1 The Newman Superposition Model 271
9.7.2 The Pseudo-Cube Method 271
9.7.3 Distances from Parameter D 272
9.7.4 Eatons' Interspin-Distance Formula 272
9.7.5 Summary 273

10 RELAXATION TIMES, LINEWIDTHS, AND KINETIC PHENOMENA 287

10.1 Introduction 287
10.2 Spin Relaxation: General Model 288
10.2.1 Spin Temperature and Boltzmann Distribution 288
10.2.2 Spin Dynamics 289
10.2.3 Mechanisms for τ_1 291
10.3 Spin Relaxation: Bloch Model 294
10.3.1 Magnetization in a Static Magnetic Field 295
10.3.2 Addition of an Oscillating Magnetic Field 297
10.3.3 Rotating Frame 297
10.3.4 Steady-State Solutions of the Bloch Equations 298
10.4 Linewidths 302
10.4.1 Homogeneous Broadening 302
10.4.2 Inhomogeneous Broadening 303
10.5 Dynamic Lineshape Effects 304
10.5.1 Generalized Bloch Equations 304
10.5.2 Other Theoretical Models 309
10.5.3 Examples of Line-Broadening Mechanisms 309
10.5.3.1 Electron-Spin Exchange 309
10.5.3.2 Electron Transfer 311
10.5.3.3 Proton Transfer 312
10.5.3.4 Fluxional Motion 313
10.5.4 Linewidth Variation: Dynamic Hyperfine Contributions 314
10.5.4.1 Single Nucleus 314
10.5.4.2 Multiple Nuclei 317
10.5.5 Molecular Tumbling Effects 320
10.5.5.1 Dipolar Effects 321
10.5.5.2 Spin-Rotational Interaction 326
10.5.6 General Example 328
10.6 Saturation-Transfer EPR 329
10.7 Time Dependence of the EPR Signal Amplitude 329
10.7.1 Concentration Changes 330
10.7.2 Chemically Induced Dynamic Electron Polarization 331
10.8 Summary 333

11 TIME-DEPENDENT EXCITATION OF SPINS 342

11.1 Introduction 342
11.2 The Idealized B_1 Switch-on 343
11.3 The Single B, Pulse 346
11.4 Fourier-Transform EPR and FID Analysis 348
11.5 Multiple Pulses 353
11.6 Electron Spin-Echo Envelope Modulation 354
11.7 Advanced Techniques 359
References 359
Notes 361
Further Reading 363
Problems 363

12 DOUBLE-RESONANCE TECHNIQUES 366

12.1 Introduction 366
12.2 A Continuous-Wave ENDOR Experiment 367
12.3 Energy Levels and ENDOR Transitions 369
12.4 Relaxation Processes in Steady-State ENDOR 373
12.5 An ENDOR Example: The *F* Center in the Alkali Halides 378
12.6 ENDOR in Liquid Solutions 382
12.7 Pulsed ENDOR Experiments 383
12.8 ENDOR in Powders and Non-crystalline Solids 383
12.9 Electron-Electron Double Resonance 385
12.10 Optically Detected Magnetic Resonance 386
12.11 Fluorescence-Detected Magnetic Resonance 387

13 OTHER TOPICS **393**

13.1 Point Defects 393
13.1.1 Insulators 393

13.1.1.1 Alkali Halides 393
13.1.1.2 Oxides 393
13.1.2 Semiconductors 394
13.2 Polymers 394
13.3 Trapped Atoms and Molecules 394
13.4 Clusters 394
13.5 Colloids 394
13.6 Coal 394
13.7 Glass 395
13.8 Ferromagnets 395
13.9 Electrochemical EPR 395
13.10 Spin Labels 395
13.11 Spin Traps 395
13.12 EPR Imaging 396
13.13 Biological Systems 396
13.14 Geological/Mineralogical Systems 396
13.15 Miscellaneous 396

APPENDIX A MATHEMATICAL OPERATIONS 397

A.1 Complex Numbers 397
A.2 Operator Algebra 398
A.2.1 Properties of Operators 398
A.2.2 Eigenvalues and Eigenfunctions 400
A.3 Determinants 403
A.4 Vectors: Scalar, Vector, and Outer Products 405
A.5 Matrices 407
A.5.1 Addition and Subtraction of Matrices 409
A.5.2 Multiplication of Matrices 409
A.5.3 Special Matrices and Matrix Properties 412
A.5.4 Dirac Notation for Eigenfunctions and Matrix Elements 412
A.5.5 Diagonalization of Matrices 414
A.6 Perturbation Theory 420
A.7 Dirac Delta Function 423
References 423
Notes 424
Further Reading 424
Problems 424

APPENDIX B QUANTUM MECHANICS OF ANGULAR MOMENTUM 428

B.1 Introduction 428
B.2 Angular-Momentum Operators 430
B.3 Commutation Relations for General Angular-Momentum Operators 431
B.4 Eigenvalues of $\hat{J}^2$ and $\hat{J}_z$ 432
B.5 Angular-Momentum Matrices 437
B.6 Addition of Angular Momenta 439
B.7 Notation for Atomic and Molecular States 445
B.8 Angular Momentum and Degeneracy of States 446
B.9 Time Dependence 447
B.10 Summary 448
References 449

Problems 450

APPENDIX C THE HYDROGEN ATOM AND AN RH, RADICAL 452

C.1 Hydrogen Atom 452
C. 1.1 Spin Hamiltonian 452
C.1.2 The Spin Eigenfunctions and Energy Matrix 453
C.1.3 Exact Solution for the Energy Eigenvalues 454
C.1.4 Energy Eigenstates and Allowed Transitions 456
C.1.5 Resonant Frequencies in Constant Magnetic Field 460
C.1.6 Resonant Magnetic Fields at Constant Excitation Frequency 460
C.1.7 Calculation of the Spin Energy Levels by Perturbation Theory 462
C.2 RH_2 Radical 465
C.2.1 Spin Hamiltonian and Energy Levels 465
C.2.2 EPR Transitions 466
References 468
Notes 468
Further Reading 468
Problems 469

APPENDIX D INSTRUMENTATION AND TECHNICAL PERFORMANCE 471

D.l CW EPR Spectrometers 473
D.l.l Magnet System 474
D.1.2 Radiation Source 475
D. 1.3 Microwave Transmission 476
D.1.4 Coupling of the Source to the Resonator 477
D. 1.5 Resonator System 478
D.1.6 Field-Modulation System 482
D.1.7 Coupling of the Resonator to the Detector 483
D. 1.8 Detection System 483
D.2 Pulsed EPR Spectrometers 486
D.3 Computer Interfacing with EPR Spectrometers 487
D.4 Techniques for Temperature Variation and Control 487
References 488
Notes 490

Problems 491

APPENDIX E EXPERIMENTAL CONSIDERATIONS 492

E. 1 Lineshapes and Intensities 492
E. 1.1 Lineshapes 492
E. 1.2 Signal Intensities and Spin Concentrations 497
E.2 Sensitivity and Resolution 500
E.2.1 Optimum Sensitivity 500
E.2.2 Modulation Amplitude 502
E.2.3 Modulation Frequency 504
E.2.4 Microwave Power Level 506
E.2.5 Temperature 507
E.2.6 Q Factor of the Resonator 507
E.2.7 Microwave Frequency 509
E.2.8 Concentration of Paramagnetic Centers 509
E.3 Measurement of g Factors and Hyperfine Splittings 510
E.4 Measurement of Relaxation Times 513
E.5 Techniques for Generation of Paramagnetic Species 513
