<b>1. Statistical Physics Is More than Statistical Mechanics</b> .....	<b>1</b>
--	----------

---

## Part I. Modeling of Statistical Systems

---

<b>2. Random Variables: Fundamentals of Probability Theory and Statistics</b> .....	<b>5</b>
2.1 Probability and Random Variables. ....	6
2.1.1 The Space of Events .....	6
2.1.2 Introduction of Probability .....	7
2.1.3 Random Variables .....	9
2.2 Multivariate Random Variables and Conditional Probabilities .....	12
2.2.1 Multidimensional Random Variables .....	12
2.2.2 Marginal Distributions .....	13
2.2.3 Conditional Probabilities and Bayes' Theorem .....	14
2.3 Moments and Quantiles .....	18
2.3.1 Moments .....	18
2.3.2 <b>Quantiles</b> .....	21
2.4 The Entropy .....	23
2.4.1 Entropy for a Discrete Set of Events .....	23
2.4.2 Entropy for a Continuous Space of Events .....	24
2.4.3 Relative Entropy .....	25
2.4.4 Remarks .....	25
2.4.5 Applications .....	26
2.5 Computations with Random Variables .....	29
2.5.1 Addition and Multiplication of Random Variables ....	29
2.5.2 Further Important Random Variables .....	33
2.5.3 Limit Theorems .....	34
2.6 Stable Random Variables and Renormalization Transformations .....	37
2.6.1 Stable Random Variables. ....	37
2.6.2 The Renormalization Transformation .....	40

2.6.3	Stability Analysis .....	40
2.6.4	Scaling Behavior .....	42
2.7	The Large Deviation Property for Sums of Random Variables. ....	44
<b>3.</b>	<b>Random Variables in State Space: Classical Statistical Mechanics of Fluids .....</b>	<b>49</b>
3.1	The Microcanonical System. ....	50
3.2	Systems in Contact .....	53
3.2.1	Thermal Contact .....	53
3.2.2	Systems with Exchange of Volume and Energy .....	60
3.2.3	Systems with Exchange of Particles and Energy .....	64
3.3	Equilibrium States and Thermodynamic Potentials .....	66
3.4	Susceptibilities .....	71
3.4.1	Heat Capacities .....	72
3.4.2	Isothermal Compressibility .....	74
3.4.3	Isobaric Expansivity .....	74
3.4.4	Isochoric Tension Coefficient and Adiabatic Compressibility .....	75
3.4.5	A General Relation Between Response Functions .....	75
3.5	The Equipartition Theorem. ....	77
3.6	The Radial Distribution Function. ....	79
3.7	Approximation Methods. ....	85
3.7.1	The Virial Expansion .....	85
3.7.2	Integral Equations for the Radial Distribution Function .....	92
3.7.3	Perturbation Theory .....	94
3.8	The van der Waals Equation .....	97
3.8.1	The Isotherms .....	98
3.8.2	The Maxwell Construction .....	99
3.8.3	Corresponding States .....	101
3.8.4	Critical Exponents .....	103
<b>4.</b>	<b>Random Fields: Textures and Classical Statistical Mechanics of Spin Systems .....</b>	<b>107</b>
4.1	Discrete Stochastic Fields .....	108
4.1.1	Markov Fields .....	109
4.1.2	Gibbs Fields .....	111
4.1.3	Equivalence of Gibbs and Markov Fields .....	112
4.2	Examples of Markov Random Fields .....	113
4.2.1	Model with Independent Random Variables .....	113
4.2.2	Auto-Model .....	114
4.2.3	Multi-Level Logistic Model .....	115
4.2.4	Gauss Model .....	116

4.3	Characteristic Quantities of Densities for Random Fields. . . . .	116
4.4	Simple Random Fields . . . . .	118
4.4.1	The White Random Field or the Ideal Paramagnetic System . . . . .	118
4.4.2	The One-Dimensional <b>Ising</b> Model . . . . .	120
4.5	Random Fields with Phase Transitions . . . . .	124
4.5.1	The Curi-Weiss Model . . . . .	124
4.5.2	The Mean Field Approximation . . . . .	126
4.5.3	The Two-Dimensional <b>Ising</b> Model. . . . .	131
4.6	The Landau Free Energy . . . . .	137
4.7	The Renormalization Group Method for Random Fields and Scaling Laws . . . . .	140
4.7.1	The Renormalization Transformation . . . . .	140
4.7.2	Scaling Laws. . . . .	141
<b>5.</b>	<b>Time-Dependent Random Variables:</b>	
	<b>Classical Stochastic Processes.</b> . . . .	145
5.1	Markov Processes . . . . .	146
5.2	The Master Equation . . . . .	149
5.3	Examples of Master Equations . . . . .	155
5.4	Analytic Solutions of Master Equations . . . . .	160
5.4.1	Equations for the Moments . . . . .	160
5.4.2	The Equation for the Characteristic Function . . . . .	161
5.4.3	Examples . . . . .	162
5.5	Simulation of Stochastic Processes and Fields . . . . .	164
5.6	The Fokker-Planck Equation . . . . .	172
5.7	The Linear Response Function and the Fluctuation-Dissipation Theorem . . . . .	177
5.8	Approximation Methods. . . . .	181
5.8.1	The $\Omega$ Expansion  . . . . .	181
5.8.2	The One-Particle Picture. . . . .	187
5.9	More General Stochastic Processes. . . . .	189
5.9.1	Self-Similar Processes . . . . .	189
5.9.2	Fractal <b>Brownian</b> Motion . . . . .	190
5.9.3	Stable Levy Processes. . . . .	191
5.9.4	Autoregressive Processes . . . . .	191
<b>6.</b>	<b>Quantum Random Systems</b> . . . . .	199
6.1	Quantum-Mechanical Description of Statistical Systems . . . . .	199
6.2	Ideal Quantum Systems: General Considerations . . . . .	205
6.2.1	Relations Between the Thermodynamic Potential and Other System Variables . . . . .	208
6.2.2	Expansion in the Classical Regime. . . . .	209

6.2.3	First Quantum-Mechanical Correction Term .....	210
<b>6.3</b>	The Ideal Fermi Gas .....	211
6.3.1	The Fermi-Dirac Distribution. ....	211
6.3.2	Determination of the System Variables .....	214
6.3.3	Applications of the Fermi-Dirac Distribution .....	216
<b>6.4</b>	The Ideal Bose Gas .....	219
6.4.1	Particle Number and the Bose-Einstein Distribution ..	219
6.4.2	Bose-Einstein Condensation .....	221
6.4.3	Pressure .....	224
6.4.4	Energy and Specific Heat .....	226
6.4.5	Entropy .....	227
6.4.6	Applications of Bose Statistics .....	227
<b>6.5</b>	The Photon Gas and Black Body Radiation .....	228
6.5.1	The Kirchhoff Law .....	234
6.5.2	The Stefan-Boltzmann Law .....	235
6.5.3	The Pressure of Light .....	236
6.5.4	The Total Radiative Power of the Sun .....	238
6.5.5	The Cosmic Background Radiation .....	240
<b>6.6</b>	Lattice Vibrations in Solids: The Phonon Gas .....	241
<b>6.7</b>	Ideal Molecules with Internal Degrees of Freedom. ....	247
<b>6.8</b>	Magnetic Properties of Fermi Systems. ....	254
6.8.1	Diamagnetism .....	254
6.8.2	Paramagnetism .....	258
<b>6.9</b>	Quasiparticles .....	259
6.9.1	Models for the Magnetic Properties of Solids .....	261
6.9.2	Superfluidity. ....	265
<b>7.</b>	<b>Changes of External Conditions</b> .....	<b>269</b>
7.1	Reversible State Transformations, Heat, and Work. ....	269
7.2	Cyclic Processes. ....	274
7.3	Exergy and Relative Entropy .....	278
7.4	Time Dependence of Statistical Systems .....	280

---

**Part II. Analysis of Statistical Systems**

---

<b>8.</b>	<b>Estimation of Parameters.</b> .....	<b>289</b>
8.1	Samples and Estimators .....	290
8.2	Confidence Intervals .....	297
8.3	Propagation of Errors .....	300
8.4	The Maximum Likelihood Estimator .....	302
8.5	The Least Squares Estimator .....	306

<b>9. Signal Analysis: Estimation of Spectra</b> .....	<b>317</b>
9.1 The Discrete Fourier Transform and the Periodogram .....	317
9.2 Filters .....	<b>323</b>
9.2.1 Filters and Transfer Functions .....	324
9.2.2 Filter Design .....	327
9.3 Consistent Estimation of Spectra .....	331
9.4 Frequency Distributions for Nonstationary Time Series .....	335
9.5 Filter Banks and Discrete Wavelet Transformations .....	338
9.6 Wavelets .....	346
9.6.1 Wavelets as Base Functions in Function Spaces .....	346
9.6.2 Wavelets and Filter Banks .....	351
9.6.3 Solutions of the Dilation Equation .....	353
<b>10. Inverse Problems:</b>	
<b>Estimation of Distributions</b> .....	<b>357</b>
10.1 Identification of Stochastic Models from Observations .....	357
10.1.1 Hidden Systems .....	357
10.1.2 The Maximum a Posteriori (MAP) Estimator .....	359
10.1.3 The MAP Estimator for the Deconvolution Problem, Inverse Problems .....	360
10.1.4 The Least Squares Estimator as a Special MAP Estimator .....	361
10.2 Strategies for Choosing the Regularization Parameter .....	362
10.3 The Regularization Method .....	364
10.4 Examples of the Estimation of a Distribution Function by a Regularization Method .....	367
<b>Appendix: Random Number Generation for Simulating Realizations of Random Variables</b> .....	<b>371</b>
<b>Problems</b> .....	<b>373</b>
<b>Hints and Solutions</b> .....	<b>393</b>
<b>References</b> .....	<b>399</b>
<b>Index</b> .....	<b>405</b>
