Chapter 1	Clocks of Elapsed Time – The Place of ESR Dating –	1
1.1	Introduction	2
1.2	Radioisotope dating	3
1.2.1	Radiocarbon (^{14}C) dating (4)	
1.2.2	Potassium–argon ($^{40}\text{K}/^{40}\text{Ar}$) dating (7)	
1.2.3	Uranium–thorium ($^{230}\text{Th}/^{234}\text{U}$) dating (8)	
1.3	Radiation effect dating	10
1.3.1	Fission track dating (10)	
1.3.2	Thermoluminescence (TL) and ESR (12)	
1.3.3	Optically stimulated luminescence (OSL) (15)	
1.4	Chemical dating	17
1.4.1	Chemical reactions and analytical dating (17)	
1.4.2	Amino acid racemization (18)	
1.4.3	Hydration of obsidian (18)	
1.5	Other methods in geochronology	19
1.5.1	Geomagnetism and archaeomagnetism (19)	
1.5.2	Isotopic variation : $\delta^{18}\text{O}$ and $\delta^{13}\text{C}$ (19)	
1.5.3	Dendrochronology (19)	
1.6	Summary	20
Chapter.2	Introduction to ESR – What is ESR ? –	23
2.1	Introduction	24
2.2	Electron spins and defects	25
2.2.1	Electron spin (25)	
2.2.2	Color center defects (26)	
2.3	Electron spin resonance (ESR)	28
2.3.1	Fundamental principle of ESR (28)	
2.3.2	ESR spectrometer (31)	
2.3.3	Data acquisition and processing (33)	
2.4	ESR spectra and parameters	34
2.4.1	Lineshapes : Gaussian and Lorentzian shapes (34)	
2.4.2	g factor (35)	
2.4.3	Anisotropic g factors and random orientation (37)	
2.4.4	Hyperfine (hf) structures (38)	
2.4.5	Proton hyperfine structures : equivalent protons (44)	
2.4.6	McConnell's relation (46)	
2.4.7	Superhyperfine (shf) structures (47)	
2.4.8	Fine structures (50)	
2.4.9	$\text{NaCl}(\text{Mn}^{2+}:\text{F}^-)$ (52)	
2.5	Powder spectrum	53
2.5.1	Averaging of g factors (53)	
2.5.2	Averaging of fine and hyperfine structures (55)	

2.6	Signal saturation, relaxation and ENDOR	57
2.6.1	Relaxation time and saturation (57)	
2.6.2	Electron nuclear double resonance (ENDOR) (58)	
2.6.3	Pulsed ESR : spin-echo (60)	
2.6.4	Fourier transform (FT-) ESR (63)	
2.6.5	Vector transfer detection (64)	
2.7	Summary	64
Chapter 3 ESR Dating and Dosimetry : Principles and Procedures		67
3.1	Principles of ESR dating and dosimetry	68
3.2	Procedures for ESR dating	70
3.2.1	Additive dose method (70)	
3.2.2	“Wait and see” method (72)	
3.2.3	Accelerated passage of time for chemical reactions (74)	
3.2.4	ESR dendrochronology (74)	
3.2.5	Plateau method (74)	
3.2.6	Direct age determination from a theoretical growth curve (76)	
3.3	Scope of ESR dating : events which set clock to zero	77
3.3.1	Crystallization (77)	
3.3.2	Action of heat (77)	
3.3.3	Optical bleaching (77)	
3.3.4	Mechanical bleaching or annealing (78)	
3.3.5	Surface etching in nature (78)	
3.4	Natural Annealing : lifetime of defects	78
3.4.1	First-order annealing (80)	
3.4.2	Second-order annealing (83)	
3.5	Growth Curve : formation and decay of defects	85
3.5.1	Insensitive volume around a defect (85)	
3.5.2	Formation and first-order decay in nature (87)	
3.5.3	Formation and second-order decay in nature (91)	
3.6	Additive dose method without extrapolation : exact solution	91
3.7	Time range and samples	92
3.7.1	Time range : upper and lower limits (92)	
3.7.2	Samples dated with ESR (94)	
3.8	Technical procedures	94
3.8.1	Sampling and preparation (95)	
3.8.2	ESR measurements (96)	
3.8.3	Artificial irradiation (99)	
3.9	Brief history of ESR dating and dosimetry	99
3.9.1	Development of ESR dating and dosimetry (99)	
3.9.2	Symposium and proceedings (101)	
3.10	Summary	102
Chapter 4 Assessment of Radiation Dose		105
4.1	Introduction	
4.2	Dosimetric	106
4.3	Annual dose quantities and units	107
	rate: radioactive equilibrium	108

	4.3.1 Natural radioactivity (108)	
	4.3.2 Annual dose rate (111)	
4.4	Radiation dose assessment	112
	4.4.1 Ranges and quality of α -, β - and γ -rays (112)	
	4.4.2 Quality effect: k-values for α -rays (115)	
	4.4.3 Internal and external doses (116)	
	4.4.4 Dose correction factors (118)	
4.5	Radioactive disequilibrium	123
	4.5.1 Initial incorporation (123)	
	4.5.2 ^{238}U-series disequilibrium : closed system (124)	
	4.5.3 Open system disequilibrium : uranium accumulation (126)	
	4.5.4 ESR isochron dating (130)	
4.6	Methods used to measure dose	131
	4.6.1 Measurements of radioactive elements (131)	
	4.6.2 External radiation measurement (136)	
	4.6.3 Constancy of annual dose rate (137)	
4.7	Summary	138
Chapter 5 CaCO_3 : Cave Deposits		141
5.1	Introduction	142
5.2	Crystal structure and defects in calcite (CaCO_3)	143
	5.2.1 Crystal structure (143)	
	5.2.2 Radiation-induced intrinsic defects (145)	
	5.2.3 Impurity-related defects (147)	
	5.2.4 Characterization of ESR signals relevant to dating (150)	
	5.2.5 Alpha-ray-induced defects : axial CO, (154)	
5.3	Thermoluminescence (TL)	155
5.4	Speleothems	156
	5.4.1 Mechanism of carbonate growth (156)	
	5.4.2 ESR spectra (157)	
	5.4.3 TDI of a stalactite (159)	
	5.4.4 Age deduction from TD using U-series disequilibrium (161)	
	5.4.5 Charge transfer method : old sample dating with signal A ? (162)	
	5.4.6 Suitable samples (162)	
	5.4.7 Examples in paleo-anthropology (163)	
5.5	Speleology (study of caves) and paleoenvironment	164
	5.5.1 Radiation environment in a cave (164)	
	5.5.2 Rainfall (165)	
	5.5.3 Growth rate and temperature (167)	
	5.5.4 Cave pearls, flowstones and travertines (167)	
5.6	Other calcium carbonates	168
	5.6.1 Spring deposits (168)	
	5.6.2 Calcreted (168)	
	5.6.3 Stromatolite (169)	
5.7	Technical notes	169
5.8	Summary	170

Chapter 6	CaCO₃ : Biocarbonates (Fossils)	177
6.1	Introduction	178
6.2	Crystal structure and defects in aragonite (CaCO₃)	179
	6.2.1 Crystal structure (179)	
	6.2.2 Radiation-induced defects (179)	
6.3	Fossil shells in sediments	181
	6.3.1 ESR spectra (181)	
	6.3.2 Relative signal intensity and age (182)	
	6.3.3 ED of shells (184)	
	6.3.4 Radiation assessment (186)	
6.4	Corals on marine terraces	188
	6.4.1 Samples and localities (188)	
	6.4.2 ESR spectra and age determination (190)	
	6.4.3 Spread of ESR ages in Barbados terraces (195)	
	6.4.4 Correction factors: variation of trap concentration (196)	
	6.4.5 Distribution of SO₃⁻ radicals (signal B) in a coral (198)	
6.5	Deep-sea sediment : planktonic foraminifera	200
6.6	Application in archaeology	202
	6.6.1 Shells from shell mounds (202)	
	6.6.2 Egg shells (203)	
6.7	Technical notes	204
6.8	Summary	206
Chapter 7	Evaporites : Sulfates and Other Minerals	211
7.1	Introduction	212
7.2	Anhydrite (CaSO₄), barite (BaSO₄) and celestite (SrSO₄)	212
	7.2.1 Crystal structures (212)	
	7.2.2 ESR spectra and models of defects (214)	
7.3	Gypsum (CaSO₄·2H₂O)	218
	7.3.1 Crystal structure (218)	
	7.3.2 ESR spectra and models of defects (219)	
	7.3.3 ESR dating of natural gypsum (223)	
	7.3.4 Distribution of radicals in a gypsum crystal (226)	
7.4	Nahcolite (NaHCO₃) and halite (NaCl)	227
	7.4.1 ESR spectra and defects in synthetic NaHCO₃ (227)	
	7.4.2 Searles Lake sediments (228)	
7.5	Nitrates, borates and other evaporites	232
	7.5.1 Nitrates (232)	
	7.5.2 Borates (232)	
	7.5.3 Other minerals (232)	
7.6	Summary	234
Chapter 8	Phosphates : Bioapatite for Anthropology	237
8.1	Introduction	238
8.2	Structure and defects in apatites	240
	8.2.1 Structure (240)	

8.22	ESR spectra and defects in synthetic apatites (241)	
8.2.3	Defects in bioapatites : bone and tooth (245)	
8.3	ESR spectra and <i>ED</i>	248
8.3.1	ESR spectra of bones and teeth (248)	
8.3.2	<i>ED</i> and age relation : relative dating (253)	
8.4	Uranium accumulation	255
8.4.1	Fossil bone (255)	
8.4.2	Tooth enamel (256)	
8.4.3	ESR isochron method (256)	
8.5	Effect of fluorination	257
8.6	ESR ages of bones and teeth in paleo-anthropology	259
8.7	Other phosphates	262
8.7.1	Phosphate nodules (262)	
8.7.2	Insular phosphorite (264)	
8.8	Technical note	265
8.9	Summary	265
Chapter 9	SiO₂ : Rocks, Faults and Sediments	271
9.1	Introduction	272
9.2	Crystal structure and defects in SiO₂	273
9.2.1	Crystal structure of quartz (273)	
9.2.2	Defects in SiO₂ : intrinsic defects (274)	
9.2.3	Impurity-associated defects (283)	
9.3	ESR dating of SiO₂ from fault gouge	288
9.3.1	ESR dating of quartz (288)	
9.3.2	Formation of fault gouge and intrafault minerals (288)	
9.3.3	Basic considerations of dating of fault movement (289)	
9.3.4	Laboratory simulation of faulting (292)	
9.4	Application to fault dating	294
9.4.1	Initial works using the E₁' center (294)	
9.4.2	Dating with various defects (297)	
9.4.3	Mylonite with slickensides : recrystallization or melting (300)	
9.5	Sediment Age	301
9.5.1	Optical bleaching ? (301)	
9.5.2	Al center (302)	
9.5.3	Ge center (303)	
9.5.4	Change in the dose rate: a new sediment dating method (303)	
9.6	E₁' center for Gigaannee (Ga) age	305
9.6.1	Age versus E₁' intensity (305)	
9.6.2	Oxygen vacancies and age (306)	
9.7	Shock-induced metamorphism: impact crater	307
9.7.1	Meteorite impact crater (307)	
9.7.2	Impact experiment on SiO₂ and crater sandstone (308)	
9.8	Technical note	308
9.9	Summary	309

Chapter 10 Silica and Silicates : Geotherm and Volcanism	315
10.1 Introduction	316
10.2 Growth of defect concentrations at geothermal areas	317
10.2.1 Saturation of defect concentration (317)	
10.2.2 Slow cooling to present temperature T_g (318)	
10.2.3 Closure temperature (318)	
10.3 Silica (SiO_2)	320
10.3.1 Volcanic rocks (320)	
10.3.2 Geothermal silica (322)	
10.3.3 Hornfels and igneous metamorphism : intrusive rock (325)	
10.3.4 Organic radicals in chert (327)	
10.4 Zircon (ZrSiO_4)	329
10.4.1 Crystal structure and models of defects (329)	
10.4.2 ESR dating of Zircon (332)	
10.5 Feldspars	333
10.5.1 Structures and models of defects (333)	
10.5.2 Plagioclase : volcanic ash (336)	
10.6 Clay minerals	337
10.6.1 Structures (337)	
10.6.2 ESR spectra and models of defects (338)	
10.6.3 Kaolinite as a paleodosimeter : past contact with radionuclides (341)	
10.7 Magnetic minerals and impurities	342
10.7.1 ESR spectra of iron minerals (342)	
10.7.2 State of Fe^{3+} impurities (344)	
10.7.3 Paramagnetic impurities in clay minerals (344)	
10.7.4 Volcanic materials and lunar soils (345)	
10.8 Fe^{3+} and Mn^{2+} in ceramics	347
10.8.1 Surface oxidation (347)	
10.8.2 Diffusion of Mn^{2+} from environment (348)	
10.8.3 Ancient technology of ceramics (348)	
10.9 Technical note	349
10.10 Summary	350
Chapter 11 Solid H_2O and CO_2 : Space and Environmental Sciences	355
11.1 Introduction	356
11.2 Solid H_2O	358
11.2.1 Structures and models of defects (358)	
11.2.2 Lifetime of defects at ambient temperature (361)	
11.2.3 Growth curve of -OH radicals (362)	
11.2.4 Environmental Sciences (364)	
11.3 Solid CO_2	364
11.3.1 Structure and models of defects (364)	
11.3.2 Lifetime of defects (365)	
11.4 Solid methane (CH_4) and other solids	366
11.4.1 Solid CH_4 (366)	
11.4.2 Other solids (369)	
11.4.3 Magnetic resonance in space ? (370)	
11.5 Summary	370

Chapter 12 Chemical ESR Dating : Organic Materials	373
12.1 Introduction	374
12.2 Principle of chemical ESR dating	374
12.2.1 Rate equation (375)	
12.2.2 Graphic analysis of chemical formation and decay (376)	
12.2.3 Time machine to accelerate a reaction (377)	
12.2.4 Light-induced reaction : photochemical ESR dating (377)	
12.3 Organic radicals	379
12.3.1 Manufactured date of potato chips (379)	
12.3.2 Dead body and fur : forensic science (380)	
12.3.3 Leather and mummy : archaeometry (381)	
12.4 Forensic science : oxidation of bloodstain	383
12.5 Historical materials	384
12.5.1 Historical papers and cellulose : preservation science (384)	
12.5.2 Silk, wool and Japanese lacquer (388)	
12.6 Agricultural products	389
12.6.1 Coffee beans : quality assessment (389)	
12.6.2 Thermal history of cereal grains : new archaeology (389)	
12.7 Coal and petroleum (engine oil)	390
12.7.1 Coal and petroleum (390)	
12.7.2 Engine oil : mileage determination (391)	
12.8 Summary	392
Chapter 13 ESR Dosimetry: Dosimeter, Accident and Foodstuffs	395
13.1 Introduction	396
13.2 Principle of ESR dosimetry	397
13.2.1 ESR radical dosimeters (397)	
13.2.2 Dosimetry with natural rock (400)	
13.3 Gamma- and X-ray dosimeters	401
13.3.1 Alanine, sugar and other organics (401)	
13.3.2 Apatite and biological materials (404)	
13.3.3 Radiation quality effect (405)	
13.4 Neutron and high linear energy transfer (LET) dosimetry	407
13.5 A-bomb radiation dosimetry	408
13.5.1 A-bomb dose reevaluation (408)	
13.5.2 Tooth enamel of A-bomb survivors (409)	
13.5.3 Shell buttons (411)	
13.5.4 Dosimetry with quartz in granite bridge pillar (413)	
13.5.5 High dose rate effect : A-bomb or accident radiation (415)	
13.6 Accident dosimetry	415
13.6.1 Chernobyl resident teeth : hot spot or artifact ? (415)	
13.6.2 Dosimetry of sugar at Chernobyl home (417)	
13.7 Dosimetry for food irradiation	418
13.8 Summary	419

Chapter 14 ESR Microscopy: Scanning Imaging of Spin Density	427
14.1 Introduction	428
14.2 CT-ESR Imaging	429
14.2.1 Field gradient method (429)	
14.2.2 Field gradient coils in a cavity : 1-D microscope (430)	
14.2.3 Field gradient wires in a cavity : 2-D microscope (432)	
14.2.4 ESR imaging application using field gradient (438)	
14.3 Scanning the localized field	439
14.3.1 Mechanical scanning of modulation field (439)	
14.3.2 Electronic scanning of static magnetic field (441)	
14.4 Localized microwave field	444
14.4.1 Simple microwave scanning ESR (444)	
14.4.2 Deconvolution method (444)	
14.5 Distribution of paramagnetic ions	447
14.5.1 Fossils of crinoids and ammonites (447)	
14.5.2 Reactive centers on catalysts : valency changes (448)	
14.6 Crystals : impurity distribution	449
14.6.1 Synthetic diamond : growth sector (449)	
14.6.2 Distribution of Gd³⁺ and radioactive elements (451)	
14.6.3 Crystal axis orientation (452)	
14.7 Dosimetric image	454
14.7.1 Microdosimetry of minerals (454)	
14.7.2 Radiation dose image in human teeth (454)	
14.7.3 ESR imaging plate (454)	
14.8 Semiconductor, bioscience and new apparatus	456
14.8.1 Dangling bonds on poly-Si CVD film : annealing image (456)	
14.8.2 Biological application (458)	
14.8.3 Can one detect a single spin ? (STM-ESR) (458)	
14.9 Summary	459
Appendix	465
A1. Theory of defect formation and decay	465
A1.1 First and second mixed-order annealing (465)	
A1.2 General solution for natural growth : formation and decay (465)	
A1.3 A new method of additive dose : growth curve (467)	
A1.4 Defect formation by natural α -rays (468)	
A2. Molecular orbital schemes	471
A2.1 AB, -type molecules (471)	
A2.2 AB_j -type molecules (472)	
A2.3 AB, -type molecules (473)	
A3. Portable ESR spectrometer for teaching	474
A3.1 A spectrometer with a permanent magnet (474)	
A3.2 Magnetic resonance imaging (MRI) experiment (476)	
A4. ESR reader for dosimetry and automatic sample changer	478
A4.1 Compact ESR reader (478)	
A4.2 Automatic sample changer (478)	

A5.1 Nondestructive **ESR** for a large object 480
A5.1.1 Forgery detection and provenance study (480)
A5.2 Applications (481)
A5.3 In-vivo oral dosimeter **(482)**
