Introduction	1

PART I STRUCTURE AND STRUCTURAL EVOLUTION

1. Structure, Bonding, and Properties	9
1.1. Crystal Structure.	9
1.2. Structure and Chemical Composition	12
1.2.1. Stoichiometric Phases	12
1.2.2. Nonstoichiometric Phases	13
1.3. Coordination Number and Coordination Polyhedron	13
1.4. Isotypism and Polymorphism.	16
1.5. Structure and Chemical Bonding	18
1.5.1 Bonding and Ion Radius	18
1.5.2 Lattice Energy of an Ionic Compound	20
1.5.3. Geometric Consideration of a Structure	23
1.5.4. Pauling and Baur's Rules	26
1.5.5 Covalent Bonding	29
1.6. Ligand Field Theory	31
1.6.1. Octahedral Coordination	32
1.6.2. Tetrahedral Coordination	34
1.6.3. Square Coordination.	35
1.7. Ligand Field Stabilization Energy	36
1.8. Coordination Polyhedra of Transition Metals	39
1.9. Molecular Orbital Theory	39
1.9.1. Molecular Orbitals	39
1.9.2. Hybridization.	42
1.10. Band Theory	44

1.10.1. The Peierls Distortion.	46
1.10.2. Two- and Three-Dimensional Bonds	47
1.11. Mixed Valent Compounds and Functional Materials	49
1.11.1. Class I Compounds: $\alpha_{ii} = 0$	50
1.11.2. Class II Compounds: $\alpha_{ii} > 0$ but Small	50
1.11.3. Class III Compounds: $\alpha_{ii} = \alpha_{\max}$	51
1.12. Structure Transformation and Stability	52
1.12.1. Phase Diagram.	52
1.12.2. Thermodynamic Stability.	55
1.13. Properties of Materials.	55
1.13.1. Mechanical Property.	57
1.13.2. Magnetic Property	58
1.13.3. Piezoelectric Property	60
1.13.4. Ferroelectric Property	61
1.13.5. Optical Property.	62
1.13.6. Electric Property	63
1.14. Structure and Property.	63
1.15. Functional Materials	65
1.15.1. Characteristics of Functional Materials.	65
1.15.2. Structural Evolution and Functionality	67
1.16. Summary	69
2. Sodium Chloride and Rutile-Related Structure Systems	71
2.1. Rock Salt Structure	71
2.2. Nonstoichiometric Compounds with Sodium Chloride Structure	74
2.3. Rutile Structure and Its Family	75
2.4. Characteristics of Rutile Structures	77
2.4.1. Apex Sharing	77
2.4.2. Edge Sharing	80
2.4.3. Face Sharing.	82
2.5. Evolution of Rutile-type Structures	82
2.6. Nonstoichiometry and Crystallographic Shear Planes	89
2.7. Summary.	92
3. Perovskite and Related Structure Systems	93
3.1. Characteristics of ABO_3 -Type Perovskite Structure.	93
3.1.1. Vertex Sharing of Oxygen Octahedra	94
3.1.2. Unit Cell by Taking a Cation as the Origin	96
3.1.3. Oxygen Cubic Close Packing.	97
3.1.4. Anion Close Packing and Formation of Tetrahedron and Octahedron	100
3.2. Possible Types of Anion-Deficient Perovskite Structures	108
3.2.1. The 14 Fundamental Structure Units.	108
3.2.2. Constructing the Family of Perovskite-Related Structures	109
3.3. The Tolerance Factor.	110
3.4. Functional Materials with Perovskite-like Structures	110

3.4.1. Ferroelectricity and Ferroelectric Compounds	111
3.4.2. Ferromagnetism and Ferromagnetic Compounds	116
3.4.3. Insulator-to-Conductor Transition	121
3.4.4. Conductive Perovskites	122
3.4.5. Magnetostrictive, Electrostrictive, and Piezoelectric Actuator Materials	128
3.4.6. Optically Switchable Compounds	130
3.5. Doping and Oxygen Vacancies	130
3.6. Giant Magnetoresistance (GMR) and Colossal Magnetoresistance (CMR)	132
3.7. Oxygen Migration and Ionic Conductivity of Perovskites	136
3.8. Anion-Deficiency Induced Perovskite to Brownmillerite Structural Evolution	138
3.9. Ordered Structural Evolution Introduced by Cation Substitution	142
3.10. Sodium Chloride, Rutile, and Perovskite Structures	143
3.10.1. Linkage and Comparison	143
3.10.2. Constructing New Materials by Tailoring	147
3.11. Summary	149
4. Fluorite-Type and Related Structure Systems	151
4.1. Basic Fluorite Structure	151
4.2. Fluorite Structure with Anion Deficiency	154
4.2.1. Oxygen Migration in Fluorite Structure	155
4.2.2. Modules of Fluorite Structure with Oxygen Deficiency	156
4.2.3. Pyrochlores and C-type Rare Earth Sesquioxide Structures	157
4.3. Characteristics of Fluorite and Fluorite-Related Structures	162
4.3.1. Thermodynamic Property	162
4.3.2. Surface Character of Rare Earth Oxides	167
4.3.3. Disproportionation of Rare Earth High Oxides	172
4.3.4. Switchable Chemical Reaction as an Oxygen Pump	176
4.4. Structural and Compositional Principles of Rare Earth Homologous Higher Oxides	177
4.4.1. Compositional Principle of the Homologous Phases	180
4.4.2. The Modular Juxtaposition Rules	182
4.4.3. Building Supercell Structure Using Modules	183
4.5. Applications of the Juxtaposition Rules to Known Structures	187
4.5.1. R_7O_{12} Phase with $n = 7$ and $m = 1$	188
4.5.2. R_9O_{16} Phase with $n = 9$ and $m = 1$	190
4.5.3. $R_{11}O_{20}$ Phase with $n = 11$ and $m = 1$	192
4.5.4. $R_{40}O_{72}$ Phase with $n = 40$ and $m = 4$	194
4.5.5. $R_{24}O_{44}$ Phase with $n = 24$ and $m = 2$	195
4.6. Predicting Undetermined Structures Using the Proposed Modules	197
4.6.1. β -polymorph with $m = 4$	198
4.6.2. Undetermined Structure with $n = 19$	199
4.6.3. Undetermined Structure with $n = 16$	200
4.6.4. Undetermined Structure with $n = 62$ and $m = 6$	201
4.6.5. Nonstoichiometric α -phase	204
4.7. Ternary Mixed Rare Earth Oxides	206

4.7.1. Ternary Mixed Rare Earth Oxides and Oxygen Storage	207
4.7.2. Cation Coordination Number and Arrangements of Modules.	209
4.8. Thermodynamics of Structural Evolution.	212
4.8.1. Gibbs Free Energy and Structural Stability.	212
4.8.2. Hysteresis in Structural Transformation	214
4.8.3. Phase Transformations and Environmental Conditions	216
4.9. Perovskite, Fluorite Structures, and Spinel Structures	217
4.9.1. Structure Comparison.	217
4.9.2. Superexchange Interaction and Magnetism.	220
4.10. Summary.	222
5. From Structural Units to Materials Engineering via Soft Chemistry.	223
5.1. Principle of Soft Chemistry	224
5.2. Sol-Gel Process	228
5.3. Colloidal Route for Preparation of Monodisperse Spherical Particles.	231
5.4. Intercalation and Pillaring Processes.	240
5.5. Self-Assembled Nanocrystal-Engineered Superlattice Thin Films	247
5.5.1. Passivated Metal Nanocrystals	249
5.5.2. Passivated Semiconductors Nanocrystals	251
5.5.3. Passivated Magnetic Nanocrystals	251
5.5.4. Magnetic Co Particles	252
5.5.5. Magnetic Iron Oxides.	253
5.6. Preparation of Nanoparticles by Aerosol Technique	253
5.7. Summary.	257

PART II

STRUCTURE CHARACTERIZATIONS

6. Electron Crystallography for Structure Analysis	261
6.1. Electron Diffraction in Structure Analysis.	262
6.1.1. Single Scattering Theory.	262
6.1.2. Reciprocal Space.	265
6.1.3. Bragg's Law and Ewald Sphere.	268
6.1.4. Indexing Electron Diffraction Patterns.	271
6.1.5. Diffraction from Twinned Crystals	272
6.2. Diffraction Contrast and Defect Analysis	274
6.2.1. Defects and Dislocations in Materials	275
6.2.2. Diffraction Contrast	277
6.2.3. Two-Beam Condition for Imaging Defects and Dislocations	282
6.2.4. Determination of Burgers Vector	284
6.2.5. Weak Beam Imaging	285
6.3. Atomic Resolution Structure Imaging and Structure Analysis.	286
6.3.1. Phase Contrast.	286
6.3.2. Abbe's Imaging Theory	288
6.3.3. Aberration and Information Transfer in TEM	291

6.3.4. Contrast Transfer Function and Image Resolution	295
6.3.5. Envelope Function and Information Transfer.	299
6.3.6. Source Coherence in Lattice Imaging	302
6.3.7. Projected Charge Density Approximation.	305
6.3.8. Multislice Theory for Transmission Electron Imaging.	307
6.3.9. Image Simulation and Structure Determination	309
6.3.10. Image Calculation of Imperfect Crystal and Interface	310
6.3.11. Energy-Filtered Electron Lattice Imaging	310
6.3.12. Limitation of HRTEM	312
6.4. Electron Holography	313
6.4.1. Principle of Off-Axis Holography In TEM.	314
6.4.2. Improvement of Image Resolution	316
6.4.3. Imaging Electrostatic Field and Charge Distribution.	316
6.4.4. Imaging Spontaneous Polarization at Domain Boundaries in Ferroelectrics.	317
6.4.5. Imaging Magnetic Domains and Flux lines	318
6.5. Convergent Beam Electron Microdiffraction	322
6.5.1. Symmetry Analysis	323
6.5.2. Measurement of Lattice Parameters.	325
6.5.3. Bloch Wave Theory and Quantitative CBED	326
6.5.4. Solid-State Bonding and Charge Redistribution.	329
6.5.5. Determination of Burgers Vector	332
6.5.6. Measurement of Specimen Thickness	336
6.6. Summary.	339
7. Structure Analysis of Functional Materials.	341
7.1. Interface and Grain Boundary Analysis.	341
7.1.1. Kikuchi Pattern and Grain Boundary Analysis	343
7.1.2. General Description of a Grain Boundary	346
7.1.3. The O-Lattice Theory.	348
7.1.4. Coincidence-Site Lattice Theory.	350
7.2. Modulation and Domain Structure	352
7.2.1. Structural Modulation.	352
7.2.2. Domains Formed by Anisotropic Crystal Structure	355
7.2.3. Boundaries of Structure Domains	360
7.3. Superstructure and Long-Range Ordering	361
7.3.1. Three-Dimensional Superstructure Analysis by a Double-Pattern Technique	362
7.3.2. Three-Dimensional Superstructure Analysis by a Single-Pattern Technique.	367
7.3.4. Long-Range Ordering of Cation Substitutions.	369
7.4. Oxygen Vacancies and Short-Range Ordering	371
7.4.1. Kinematical Diffraction Theory of Diffuse Scattering.	373
7.4.2. Geometrical Description of Diffuse Scattering.	376
7.4.3. Calculation of Short-Range Ordering Parameter	380
7.4.4. HRTEM Study of Short-Range Orderl	382
7.5. Effects of Substrate on Thin-Film Growth.	382

7.5.1. Lattice Mismatch and Interface Dislocations.	383
7.5.2. Nucleation and Growth of Defects from Substrate Surfaces	385
7.5.3. Linkage of Domain Boundaries with Interface Dislocations	387
7.5.4. Linkage of Interface Dislocations with Planar Defects	393
7.6. <i>In Situ</i> Observation of Structure Evolution	395
7.6.1. Temperature-Driven Structure Transformation	395
7.6.2. Electric-Field-Driven Structure Transformation	396
7.6.3. Magnetic Moment of the Specimen	397
7.7. Failure Analysis of Devices	398
7.8. Imaging Surfaces of Oxides	400
7.9. Summary.	404
8. Chemical and Valence Structure Analysis of Functional Materials.	405
8.1. Inelastic Excitation Processes in Electron Scattering	405
8.2. Energy Dispersive X-ray Microanalysis	408
8.2.1. Composition Analysis.	409
8.2.2. Atom Location by Channeling-Enhanced Microanalysis (ALCHEMI)	412
8.3. Valence Excitation EELS	416
8.3.1. Classical Electron Energy Loss Theory	418
8.3.2. Surface Plasmon Excitation	424
8.3.3. Measurement of Dielectric Function	427
8.4. Atomic Inner-Shell Excitation in EELS.	429
8.4.1. Composition Analysis.	433
8.4.2. Near-Edge Fine Structure and Bonding in Crystals	435
8.5. Quantitative Determination of Valences in a Mixed Valent Compound	437
8.5.1. White Lines of Transition Metals	437
8.5.2. The Occupation Number of the d-Band Electrons	438
8.5.3. White-Line Intensity and Intrinsic Magnetic Moment.	442
8.5.4. Double-Derivative Spectrum for Calculation of White-Line Intensity.	444
8.6. Nanoprobe Analysis of Interfaces and Grain Boundaries	445
8.7. Chemical-Sensitive Imaging in STEM	450
8.8. Energy-Filtered Electron Imaging in TEM.	452
8.8.1. Composition-Sensitive Imaging Using Valence Loss Electrons	455
8.8.2. Composition-Sensitive Imaging Using Inner-Shell Ionization Edge Electrons	456
8.8.3. Mapping of Bonding and Valence State.	457
8.9. Phonon Scattering and Chemical-Sensitive Imaging	458
8.9.1. “Z-Contrast” Imaging in STEM.	458
8.9.2. High-Angle Dark-Field Conical Scan Imaging in TEM	459
8.10. Conjunction of Various Techniques for Structure Refinement of La₈Sr₈Co₁₆O₃₆—an Example	459
8.10.1. Chemical Composition Analysis	462
8.10.2. Valence State of Co	463
8.10.3. HRTEM Lattice Image of LSCO	465

8.10.4. Structure Model of $\text{La}_{0.5}\text{Sr}_{0.5}\text{CoO}_{2.25}$	466
8.10.5. Structure and Magnetoresistance	469
8.11. S u m m a r y	470

APPENDIXES

A. Physical Constants, Electron Wavelengths, and Wave Numbers	471
B1. Crystallographic Structure Systems	473
B2. FORTRAN Program for Calculating Crystallographic Data.	477
C. Electron Diffraction Patterns for Several Types of Crystal Structures	483
D. FORTRAN Program for Calculating Single Valence-Loss EELS Spectra in TEM	493
References.	497
Subject Index	507
Materials Index.	511
