Preface to first edition xiii

Preface to second edition xv

Chapter 1	The general problem of the stability of microstructure	1
1.1	Introduction	1
1.2	Driving forces for microstructural change – reduction of free energy	6
1.3	Mechanisms of microstructural change – rate controlling step	12
1.4	Quantitative microscopy	27
Chapter 2	Structural instability due to chemical free energy	28
2.1	Instability due to non-uniform solute distribution	28
2.1.1	Thermodynamics of diffusion	28
2.1.2	Modified diffusion equation in the presence of a Kirkendall effect	35
2.1.3	The origin of non-uniform solid solutions – coring or interdendritic segregation	39
2.1.4	Homogenisation of segregation in cast alloys	41
2.1.5	Homogenisation above the non-equilibrium melting temperature	44

2.1.6	<i>Deformation of segregated alloys and its effect on homogenisation</i>	46
2.1.7	<i>Banding in rolled steels</i>	50
2.2	Nucleation of precipitates from supersaturated solid solution	51
2.2.1	<i>Spinodal decomposition</i>	51
2.2.2	<i>Homogeneous nucleation</i>	55
2.2.3	<i>Heterogeneous nucleation</i>	57
2.2.4	<i>The formation of transition phases</i>	60
2.2.5	<i>Trace element effects</i>	63
2.3	Growth of precipitates from supersaturated solid solution	64
2.3.1	<i>Diffusion controlled growth</i>	65
2.3.2	<i>Growth kinetics of grain boundary phases</i>	69
2.3.3	<i>Growth kinetics of Widmanstätten plates</i>	71
2.3.4	<i>Formation of misfit dislocations at interphase boundaries</i>	72
2.4	Second-phase dissolution	77
2.4.1	<i>Diffusion limited dissolution</i>	78
2.4.2	<i>Interface reaction kinetics</i>	80
2.4.3	<i>Precipitate arrays</i>	82
2.4.4	<i>Application of the theory</i>	82
Chapter	Highly metastable alloys	84
3.1	Manufacturing methods	85
3.1.1	<i>Rapid solidification</i>	85
3.1.2	<i>Cooling rate and undercooling</i>	87
3.1.3	<i>Condensation, chemical reaction and mechanical disruption</i>	91
3.2	Metastable phase diagrams	94
3.2.1	<i>T₀ lines</i>	94
3.2.2	<i>Submerged phases and transformations</i>	95
3.2.3	<i>Glass transition temperature</i>	99
3.3	Metastable crystalline phases	106
3.3.1	<i>Microcrystalline and nanocrystalline alloys</i>	106
3.3.2	<i>Segregation and supersaturated solid solutions</i>	108
3.3.3	<i>Metastable crystalline and quasicrystalline compounds</i>	114
3.4	Amorphous alloys	121
3.4.1	<i>Formation of amorphous alloys</i>	121

3.4.2	Amorphous alloy structure	126
3.4.3	Atomic mobility and relaxation	132
3.4.4	Crystallisation	138
Chapter 4	Instability due to strain energy	147
4.1	The stored energy of cold work	147
4.1.1	Changes in thermodynamic functions resulting from deformation	147
4.1.2	Measurement of the stored energy of cold work	149
4.1.3	Mechanisms for the storage of energy	151
4.1.4	Variables affecting the stored energy	156
4.2	Recovery	166
4.2.1	The kinetics of recovery	166
4.2.2	Mechanisms of recovery	168
4.3	Recrystallisation	183
4.3.1	Kinetics of recrystallisation	183
4.3.2	Nucleation of recrystallisation	188
4.3.3	Growth of new grains in recrystallisation	192
4.3.4	The recrystallisation of two-phase alloys	202
Chapter 5	Microstructural instability due to interfaces	219
5.1	Introduction	219
5.2	Surface energy and surface tension – σ	220
5.3	Atomic origin of the interfacial free energy	228
5.4	The anisotropy of surface free energy – the σ plot and the Gibbs-Wulff theorem	231
5.4.1	Faceting	237
5.5	Precipitate coarsening: ‘Ostwald ripening’	239
5.5.1	Interfacial free energy	241
5.5.2	The mechanism and kinetics of Ostwald ripening	243
5.5.3	Lattice diffusion – the rate controlling process	251
5.5.4	Interface kinetics: atom transfer across the interface as the rate controlling step	259
5.5.5	Ripening of precipitates on grain boundaries	260
5.5.6	Ripening of precipitates on low angle (dislocation) boundaries	262
5.5.7	Effect of volume fraction on coarsening rates	263
5.5.8	Onset of the coarsening reaction	266

5.5.9]	The coarsening reaction in ternary and higher order alloys	270]
5.6	Experimental investigations of precipitate coarsening	271]
5.6.1	Coarsening of spherical or near spherical precipitates	272]
5.6.2	Coarsening of non-spherical precipitates	287]
5.6.3]	Coarsening kinetics suggesting substructure enhanced diffusion	290]
5.6.4]	Some applications of the coarsening theory	293
5.6.5]	Systems that resist coarsening	295]
5.6.6	General conclusions on particle coarsening	297
5.7	Stability of lamellar or fibrous microstructures	298
5.7.1]	Rod or fibrous eutectics	298]
5.7.2]	Lamellar eutectics	300]
5.7.3	Experimental observations of coarsening fibrous eutectic microstructures	302]
5.7.4]	Observations of coarsening of lamellar eutectics	303]
5.7.5	Effect of stress and strain on the stability of eutectic microstructures	304]
5.7.6]	Discontinuous coarsening of polycrystalline lamellar structures	306
5.8	Microstructural change due to grain boundary energies	307]
5.8.1	Normal grain growth	307]
5.8.2	Computer modelling of grain growth	316
5.8.3]	Experimental results	322
5.8.4]	Influence of a dispersed second phase on grain growth	326]
5.8.5]	Abnormal grain growth	346
5.8.6	Dragging of particles by moving grain boundaries	362]
5.9	Dendrite arm coarsening	366
Chapter 10	Other causes of microstructural instability	367
6.1	Introduction	367
6.2	Migration of second-phase inclusions in a temperature gradient	368
6.2.1	Migration of liquid inclusions	371]
6.2.2	Interaction of migrating inclusions with grain boundaries	376
6.2.3	Shape stability of migrating liquid inclusions	377
6.2.4	Migration of gas bubbles	378

6.2.5	Migration of two-phase (liquid and vapour) inclusions	380
6.2.6	Migration of solidphases	383
6.2.7	The Soret effect: thermal migration of atoms in a temperature gradient	383
6.3	Migration in a gravitational (acceleration) field	384
6.4	Migration in an electric field – electromigration	385
6.4.1	Migration of grain boundaries under the influence of an electric field	386
6.5	Effect of magnetic fields on metallic microstructure	387
6.5.1	Effect of magnetic fields on the orientation of microstructural features	387
6.5.2	Phase transformations in a magnetic field	390
6.6	Deformation	391
6.6.1	Effect of plastic deformation and fatigue loading on metastable precipitates	391
6.6.2	Enhancement of dislocation recovery by fatigue strain	397
6.6.3	Stress annealing	397
6.6.4	Changes in precipitate distribution during diffusion creep	399
6.7	Precipitate stability under irradiation	401
	References	403
	Index	423
