

CONTENTS

CHAPTER I

THE ELECTRON THEORY

SECT.		PAGE
1.	Electrons and Positive Nuclei	1
2.	Fundamental Electromagnetic Equations of the Electron Theory - - -	2
3.	Remarks on the Fundamental Equations and on the Fields - - -	4
4.	Calculation of the Magnetic Field Strength. The Vector Potential - -	5
6.	Calculation of the Electric Field Strength. The Scalar Potential - -	6
6l	Examples of the Use of Equations	7
7.	Poynting's Theorem	8
8.	Electromagnetic Momentum	8
9.	Momentum and Energy of Matter	9
10.	Relations between the Energy, Momentum, Velocity, and Mass of a Particle	10
11.	Relation of the Mass of an Electron to its Charge - - - - -	11
12.	Force on a Charge moving in a Magnetic Field - - - - -	12
13.	Force on a Moving Electron	14
14.	Radiation from an Accelerated Electron	15
15.	Properties of Matter in Bulk	16
16.	Polarization. Electric Displacement. Equations for Non-magnetic Insulator at Rest	18
17.	Specific Inductive Capacity. Refractive Index	19
18.	Equations for a Ferromagnetic Substance at Rest	21
19.	Equations for a Moving Medium	23
20.	Metallic Conduction	25
21.	Superconductivity	28

CHAPTER II

THEORIES OF MAGNETISM

1.	Magnetic Moment due to Electrons	30
2.	Theory of Diamagnetism	31
3.	Paramagnetism. The Magneton	32
4.	Langevin's Theory of a Paramagnetic Gas	33
6.	Extension of Langevin's Theory to Solids and Liquids - - - - -	34

SECT.		PAGE
6.	Modifications based on Quantum Theory	35
7.	Pauli's Theory of Paramagnetism. Ferromagnetism-Weiss's Theory	36
8.	Weiss's Explanation of Hysteresis	42
9.	Other Theories of Ferromagnetism	42
10.	Magnetic Properties of Crystals	43
11.	Magnetization and Rotation	44
12.	Measurement of Magnetic Moment of Atoms and Atomic Nuclei	45

CHAPTER III THERMIONICS

1.	Experimental Phenomena	48
2.	O. W. Richardson's Theory of the Thermionic Current	49
3.	The Thermionic Work Function	60
4.	Objections to Classical Theory	61
5.	Thermodynamical Theory of Thermionic Emission	52
6.	Fermi-Dirac Theory	55
7.	Space Charge Effect	56
8.	Distribution of Electron Velocities	69

CHAPTER IV PHOTO-ELECTRICITY

1.	Ultra-violet Light and Emission of Electrons	61
2.	Millikan's Experiments. Critical Frequency	62
3.	Einstein's Theory	63
4.	Fermi-Dirac Theory	63
5.	Photo-electricity and the Classical Wave Theory	64
6.	Relation of Emission to Frequency. O. W. Richardson's Theory	65
7.	Thermionic Emission and Photo-electric Action	67

CHAPTER V THE QUANTUM THEORY

1.	Inadequacy of Newtonian Dynamics	68
2.	Microscopic and Macroscopic States. Statistical Mechanics	68
3.	Entropy and Probability	70
4.	State Space of a System	72
5.	Planck's Theory of Entropy and Free Energy	73
6.	Planck's Constant	76
7.	Monatomic Gas	76
8.	Vapour Pressure	78
9.	Simple Oscillators	78

CONTENTS

ix

SECT.	PAGE
10. Quantum Theory of Specific Heat - - -	80
11. Theory of Heat Radiation - - - -	83
12. Einstein's Theory of Heat Radiation - -	86
13. Fermi-Dirac Theory of Electron Gas - -	88
14. Bohr's Theory of the Hydrogen Atom - -	90
15. Quantum Mechanics - - - - -	92
16. Ray Paths and Particle Paths - - -	96
17. Wave Groups - - - - -	97
18. Schrödinger's Equation - - - - -	100
19. Simple Oscillator - - - - -	102
20. Central Forces - - - - -	104
21. Atoms with One Electron - - - -	106
22. Operators - - - - -	107
23. General Principles of Quantum Mechanics -	109
24. Orthogonal Functions - - - - -	112
25. Matrices - - - - -	116
26. The Variation Method - - - - -	119
27. The Hydrogen Molecule and the Helium Atom	124
28. Pauli's Exclusion Principle - - - -	126
29. Perturbation Theory - - - - -	128
30. Stark Effect - - - - -	131
31. Angular Momentum - - - - -	131
32. Selection Rules - - - - -	132
33. Zeeman Effect - - - - -	133
34. Transitions due to a Perturbation - - -	135
36. Collisions - - - - -	138
36. Elastic Collisions - - - - -	141

CHAPTER VI

THE CRITICAL POTENTIALS OF ATOMS

1. Quantum Theory and Critical Potentials - - -	143
2. Lenard's Measurements - - - - -	143
3. Results of Franck and Hertz with Mercury Vapour -	146
4. Methods distinguishing Ionization and Excitation Potentials	146
5. Agreement of Results with Quantum Theory - - -	148
6. Smyth's Application of Positive Ray Analysis - - -	150

CHAPTER VII

X-RAYS AND γ -RAYS

1. Nature of X-rays - - - - -	162
2. The Coolidge Tube - - - - -	163

SECT.	PAGE
3. Scattering. Diffraction. Characteristic X-rays	153
4. Crystallography. Law of Rational Indices	154
5. Diffraction Patterns	157
6. W. L. Bragg's Theory of Diffraction Patterns	157
7. W. H. Bragg's X-ray Spectrometer	160
8. Example of Use of X-ray Spectrometer	161
9. Wave-lengths of Characteristic X-rays of the Elements. Moseley's Work	163
10. Quantum Theory of Spectra. Energy Levels. K, L, M, and N Series. Quantum Numbers	165
11. X-ray Absorption Spectra. Energy Levels	166
12. Energy of Electrons and Frequency of Rays. De Broglie's Apparatus	168
13. Scattering of X-rays. Classical Theory	169
14. A. H. Compton's Quantum Theory of Scattering	170
15. Experiments supporting Quantum Theory of X-rays	171
16. γ -rays	173
17. The J Phenomenon	176
18. Cosmic Rays	176
19. Cosmic Ray Showers	179
20. Mesons	181

CHAPTER VIII

OPTICAL SPECTRA

1. Principal, Sharp, Diffuse, and Fundamental Series	182
2. The Combination Principle	184
3. Spectra of Atoms which have lost Electrons	185
4. Spectra of Atoms containing 1, 2, 3, and 4 Electrons	185
5. Spectra of Atoms with 11 Electrons	187
6. Analogy with Moseley's Law. Second Quantum Numbers	189
7. The Series Terms for Sodium	191
8. Series Lines and Absorption	191
9. Doublets and Triplets	192
10. Band Spectra. Quantum Theory	193

CHAPTER IX

CATHODE RAYS, β -RAYS, AND α -RAYS

1. Crookes' Experiments	196
2. The Wehnelt Cathode. Magnetic and Electric Deflection	197
3. Cathode Rays are Negatively Charged Particles. Charge and Mass	199
4. Ratio of Charge to Mass. Measurements of Kaufmann and J. J. Thomson	200
5. Cathode Rays and Ionization of Gases	201
6. Absorption of Cathode Rays	202
7. Kaufmann's Experiments	203

SECT.	PAGE
8. Bucherer's Experiments. Mass and Velocity - - - - -	205
9. Scattering of β -rays by Matter. Mathematical Theory - - - - -	207
10. Experiments on Scattering of p-rays - - - - -	209
11. Absorption of β -rays - - - - -	210
12. β -rays and Positron Energies - - - - -	211
13. Fermi's β -ray Theory - - - - -	213
14. Neutrons - - - - -	214
15. Ratio of Charge to Mass - - - - -	216
16. Counting of α -rays. Scintillations. Ionization - - - - -	216
17. Charge carried by α -rays - - - - -	217
18. α -rays are Charged Helium Atoms - - - - -	218
19. Range and Velocity of α -rays - - - - -	219
20. Ionization by α -rays. Stopping Power - - - - -	220
21. Single Scattering of α -rays - - - - -	221
22. α -ray Energies - - - - -	223
23. Theory of α -ray Disintegrations - - - - -	226

CHAPTER X

POSITIVE RAYS

1. Nature of Positive Rays - - - - -	229
2. Experiments of J. J. Thomson - - - - -	229
3. Theory of the Positive Ray Parabolas - - - - -	230
4. Have All the Atoms of a Given Element the Same Mass? - - - - -	231
6. Aston's Method of Positive Ray Analysis - - - - -	232
6. Theory of Aston's Mass Spectrograph - - - - -	233
7. Aston's Results - - - - -	234
8. Hot Anode Method for Positive Rays - - - - -	235
9. Dempster's Method - - - - -	235
10. Isotopes - - - - -	236
11. Precision Mass Spectrographs - - - - -	236

CHAPTER XI

RADIOACTIVE TRANSFORMATIONS

1. Discovery of Radioactivity. Radium - - - - -	239
2. Uranium-X and Thorium-X - - - - -	240
3. Rutherford and Soddy's Theory - - - - -	241
4. Table of Products formed from Uranium - - - - -	244
5. Properties of Radon - - - - -	245
6. Experimental Study of Products from Radon - - - - -	247
7. Heat evolved by Radium - - - - -	248
8. Artificial Radioactivity - - - - -	249

CHAPTER XII

ATOMIC NUCLEI

SECT.		PAGE
1.	Atomic Numbers and Mass Numbers - . . .	261
2.	Energies of Formation -	262
3.	W&sacker's Semiempirical Equation - . . .	264
4.	Stability of Atoms -	266
6.	The Very Light Atoms -	267
6.	Theory of the Deuteron -	268
7.	Collisions between Neutrons and Protons - . . .	269
8.	Photoelectric Disintegration of Deuterons - . . .	260
9.	Nuclear Reactions -	262
10.	Disintegrations due to α -rays -	263
11.	Disintegrations due to Protons and Deutrons - . . .	266
12.	The Cyclotron -	267
13.	Energies of Formation -	270
14.	Calculation of Atomic Weights -	271
15	Constitution of Nuclei -	272
16.	Nuclear Fission -	276
17.	Meson Theory of Nuclear Forces -	278

CHAPTER XIII

GASEOUS IONS

1.	Mobility of Ions -	281
2.	Measurement of Ionic Mobilities. Zeleny's Method -	282
3.	Langevin's Method -	283
4.	Rutherford's Method -	284
5	Results of Various Experimenters -	285
6.	Theory of Ionic Velocities -	286
7.	Mobility and Coefficient of Diffusion -	287
8.	Townsend's Determination of Coefficients of Diffusion -	287
9.	Another Method of Determining the Charge on One Mol of Gaseous Ions -	288
10	Recombination of Ions -	289
11.	Formation of Clouds on Ions -	290
12.	Photographs of Tracks of α - and β -rays -	291
13.	Direct Determination of the Ionic Charge -	293
14.	Townsend's Method -	293
16.	Method of J. J. Thomson -	294
16	Another Method of Determining the Ionic Charge -	295
17.	Millikan's Method -	296
18.	Perrin's Investigations. Brownian Movements and Diffusion -	299

CHAPTER XIV

THE MOTION OF ELECTRONS IN GASES

SECT.:		PAGE
1.	Townsend's Apparatus	303
2.	Mathematical Theory of Townsend's Experiment	306
3.	Average Velocity and Kinetic Energy of the Electrons	306
4.	Ionization by Collisions	309
6.	Ionization by Positive Ions'	311
6.	Sparking Potentials	313
7.	Alternative Theory of Action of Positive Ions -	316

CHAPTER: XV

THE ELECTRICAL CONDUCTIVITY OF FLAMES

1.	Conductivity of a Bunsen Flame	317
2.	Potential Differences in the Flame	318
3.	Ions and Electrons: Theory of Conductivity of Flames	319
4.	Electron Mobilities in Flames	323
5.]	Conductivity of Metallic Vapours in Flames	326
6.	Thermodynamical Theory	327
7.	Conductivity with Varying Amounts of Salt in Flame	328
8.	Conductivity for Alternating Currents	330
9.	Mobility of Positive Ions in Flames	332

CHAPTER XVI

THE POSITIVE COLUMN AND NEGATIVE GLOW

1.	The Positive Column, Negative Glow, Crookes Dark Space, and Faraday Dark Space	336
2.	Potential Differences in the Tube	336
3.	The Cathode Fall of Potential	338
4.	Theory of the Cathode Fall of Potential	340
5.	Comparison with Experiment	342
6.	The Positive Column	344

CHAPTER XVII

ATMOSPHERIC ELECTRICITY

1.	Vertical Field in the Atmosphere. Conductivity	347
2.	How is the Earth's Charge Maintained?	348

CHAPTER XVIII

SPECIAL RELATIVITY

SECT.	PAGE
1. Relativity in Newtonian Dynamics - - - - -	352
2. The Ether, or Space - - - - -	355
3. Motion through Space—the Michelson-Morley Experiment - - - - -	356
4. The Fitzgerald Contraction - - - - -	359
5. Einstein's Special Theory. Lorentz Transformation - - - - -	360
6. Relativity of Time - - - - -	362
7. Composition of Velocities - - - - -	363
8. Invariance in Expression of Physical Laws. Fizeau's Experiment - - - - -	364
9. Minkowski's Theory - - - - -	365
10. Minkowski Velocity - - - - -	369
11. Minkowski Force - - - - -	370
12. Work and Energy - - - - -	371
13. World Tensors - - - - -	371
14. The Electromagnetic Equations - - - - -	374

CHAPTER XIX

GENERAL RELATIVITY AND GRAVITATION

1. Principle of Equivalence - - - - -	376
2. Curvilinear Co-ordinates. World Lines and Geodesics - - - - -	378
3. General Expression for ds^2 . Einstein's Problem - - - - -	380
4. Theory of Tensors - - - - -	381
5. The Fundamental Tensor - - - - -	385
6. Equations of a Geodesic. Christoffel's Symbols - - - - -	386
7. Covariant Differentiation - - - - -	388
8. The Riemann Tensor - - - - -	389
9. Einstein's Law of Gravitation - - - - -	390
10. The Field due to a Particle - - - - -	391
11. Planetary Orbit - - - - -	392
12. Deflection of Light Rays by the Sun - - - - -	395
13. Displacement of Spectral Lines - - - - -	396

CHAPTER XX

MATHEMATICAL NOTES

1. Vector Analysis - - - - -	398
2. Scalar Product and Vector Product of Two Vectors - - - - -	400
3. Scalar and Vector Fields - - - - -	401
4. Line Integrals. Potentials - - - - -	401
5. Vector Lines and Tubes - - - - -	402

CONTENTS

xvi

SECT.	PAGE
6. Green's Theorem	403
7. Another Form of Green's Theorem " " "	406
8. Solution of Poisson's Equation ---	406
9. Solution of Equation for a Propagated Potential	408
10. Curl of a Vector	410
11. Stokes's Theorem	410
12. Components of the Curl of a Vector " "	411
13. Some Important Relations ----	412
14. Theorem of Coriolis	414
15. Fourier's Series and Integrals " " " "	416
16. Theory of Two Equal Coupled Oscillators -	417
E X A M P L E S " " " " " "	419
A P P E N D I X I. —Periodic Table of the Elements	433
A P P E N D I X II. —Table of Numerical Values -	434
