# Contents

**Foreword ix**

**Preface to the First Edition xi**

**Preface to the Second Edition xiii**

**List of Contributors xv**

**Note on Energy Units xvii**

## **1 Electricity from the Sun 1**

1.1 Why we need photovoltaics 1

*Summary of the chapter 4*

Bibliography and references 4

## **2 Solar Radiation 5**

Aim 5

Objectives 5

Notation and units 5

2.1 Introduction 6

2.2 Energy from the Sun 7

2.2.1 Introduction 7

2.2.2 Some astronomy 10

2.2.3 Radiation on an inclined surface 14

Summary of the chapter 18

Bibliography and references 19

Self-assessment questions 19

*Answers 20*

## **3 Solar Cells 23**

Aims 23

Objectives 23

Notation and units 23

3.1 Introduction 24

3.2 What are solar cells? 25

*Summary 26*

3.3 How solar cells work 26

3.3.1 Introduction 26

3.3.2 Electronic structure of semiconductors 27

3.3.3 The solar cell 35

3.3.4 Power losses in solar cells 39

## VI CONTENTS

3.3.5	Temperature and irradiance effects	43
	<i>Summary</i>	45
3.4	<b>Silicon</b> solar cell technology	46
3.4.1	Introduction	46
3.4.2	From sand to pure silicon	47
3.4.3	Growth of silicon crystals	49
3.4.4	Typical solar cell fabrication process	55
3.4.5	Module fabrication	61
	<i>Summary</i>	61
3.5	Thin-film solar cells	62
3.5.1	Introduction	62
3.5.2	Amorphous silicon cells	63
3.5.3	Thin polycrystalline silicon on low-cost substrates	66
3.5.4	Copper indium diselenide cells	68
3.5.5	Cadmium telluride cells	71
3.5.6	Integrally interconnected modules	73
	<i>Summary</i>	73
	Summary of the chapter	74
	Bibliography and references	74
	Self-assessment questions	75
	<i>Answers</i>	77
<b>4</b>	<b>Photovoltaic System Engineering</b>	<b>81</b>
	Aim	81
	Objectives	81
	Notation and units	82
4.1	Introduction	83
4.2	Structure of a photovoltaic system	83
	<i>Summary</i>	85
4.3	The photovoltaic generator	85
4.3.1	Introduction	85
4.3.2	Photovoltaic modules	85
4.3.3	Interconnection of PV modules	90
4.3.4	Capturing the sunlight	92
	<i>Summary</i>	92
4.4	Energy storage	93
4.4.1	Introduction	93
4.4.2	Battery operation in PV systems	94
4.4.3	Lead-acid batteries	95
	<i>Summary</i>	98
4.5	Power conditioning and control	98
4.5.1	The blocking diode	98
4.5.2	Self-regulating systems	100
4.5.3	Charge regulator	100
4.5.4	DC/DC converter	107
4.5.5	DC/AC converter (inverter)	108
4.5.6	Alarms, indicators and monitoring equipment	108
	<i>Summary</i>	108
4.6	Sizing photovoltaic systems	110
4.6.1	Introduction	110
4.6.2	Radiation and load data	110
4.6.3	The system energy balance	111
4.6.4	Sizing and reliability	118
	<i>Summary</i>	120
4.7	Photovoltaic-diesel hybrid energy systems	120
4.7.1	Introduction	120
4.7.2	System configurations	123

4.7.3 System components 127  
 4.7.4 Control and simulation 129  
 Summary 131  
 Summary of the chapter 132  
 Bibliography and references 133  
 Self-assessment questions 133  
 Answers 135

**5 Applications 137**

Aims 137  
 Objectives 137  
 Notation and units 137  
 5.1 Introduction 138  
 5.2 Economics of PV installations 142  
   5.2.1 Introduction 142  
   5.2.2 Life-cycle costing 148  
   5.2.3 Conclusion 155  
   Summary 155  
 5.3 Rural electrification 155  
   5.3.1 Introduction 155  
   5.3.2 Domestic supply 156  
   5.3.3 Health care systems 157  
   5.3.4 Lighting 160  
   5.3.5 Battery charging 161  
   Summary 163  
 5.4 Water pumping 163  
   5.4.1 Introduction 163  
   5.4.2 The technology 163  
   5.4.3 Sizing and cost 167  
   Summary 168  
 5.5 Professional applications 168  
   5.5.1 Introduction 168  
   5.5.2 Telecommunications and remote monitoring 169  
   5.5.3 Cathodic protection 180  
   Summary 180  
 5.6 Electric power generation in space 180  
   5.6.1 Introduction 180  
   5.6.2 Satellite PV system 181  
   5.6.3 The PV generator 185  
   Summary 187  
 5.7 Grid-connected systems 188  
   5.7.1 Introduction 188  
   5.7.2 PV power stations 190  
   5.7.3 PV in buildings 191  
   Summary 204  
 Summary of the chapter 204  
 Bibliography and references 205  
 Self-assessment questions 205  
 Answers 207

**6 Environmental Impacts of Photovoltaics 209**

Aims 209  
 Objectives 209  
 6.1 Introduction 209  
 6.2 The need for environmental assessment of energy sources 210  
 Summary 211

## VIII CONTENTS

6.3 Methodological framework	211
6.3.1 Introduction	211
6.3.2. External costs	211
6.3.3 Fuel cycles, environmental burdens and impacts	212
<i>Summary</i>	214
6.4 Environmental costs of photovoltaics	214
<i>Summary</i>	219
6.5 Conclusion	219
Summary of the chapter	221
Bibliography and references	221
Self-assessment questions	222
<i>Answers</i>	222

### **Advanced and Specialised Topics**      **225**

Aim	225
Objectives	225
Notation and units	225
7.1 Large PV projects	226
7.1.1 Introduction	226
7.1.2 Application of large PV projects	227
7.1.3 Economics of large PV projects	228
7.1.4 Technical characteristics	228
7.1.5 Subsystems	230
7.1.6 Safety aspects of high-voltage PV systems	233
<i>Summary</i>	233
1.2 Photovoltaics under concentrated sunlight	234
7.2.1 Introduction	234
7.2.2 Concentration and efficiency	236
7.2.3 Maximum possible concentration	237
7.2.4 Design of practical concentrators	239
7.2.5 Tracking systems	243
<i>Summary</i>	245
7.3 Electrochemical photovoltaics	247
7.3.1 Photoelectrochemistry presented	247
7.3.2 Electrochemical photovoltaics	248
7.3.3 Photocatalysis and photochemistry	257
<i>Summary</i>	259
7.4 Alternative storage: the hydrogen economy	260
7.4.1 Introduction	260
7.4.2 Generation of hydrogen	262
7.4.3 Transport and storage of hydrogen	264
7.4.4 Hydrogen utilisation technologies	266
<i>Summary</i>	267
Bibliography and references	267
Self-assessment questions	267
<i>Answers</i>	269
