I INTRODUCTORY MATERIAL 1

1 Atomic Bonding 3

- 1.1 Interatomic Potential and Binding Energy / 3
- 1.2 Correlation of Binding Energy and Interatomic Potential with Physical Properties / 7
 - 1.2.1 Interatomic Potential, Binding Energy and Enthalpy of Sublimation / 7
 - 1.2.2 Interatomic Potential and Theoretical Strength / 7
 - 1.2.3 Interatomic Potential and Vibrational Frequency / 11
- 1.3 Embedded Atom, Monte Carlo and Molecular Dynamics Calculations / 13
- 1.4 Problems / 15

2 Regular Solution (Quasi-Chemical) Model 17

- 2.1 The Gibbs Free Energy of Binary Solutions / 17
- 2.2 Ideal Solutions / 19
- 2.3 Chemical Potential / 20
- 2.4 Regular Solutions / 22
- 2.5 Systems with a Miscibility Gap / 26
- 2.6 Ordered Alloys / 28
- 2.7 Effect of Temperature on Solid Solubility / 32

- 2.8 Calculation of Regular Solution Constant and ϵ_{AB} from Phase Diagrams / 34
- 2.9 Generality of the Regular Solution Model / 37
- 2.10 Problems / 38

Part I References and Additional Reading **42**

II SOLID-VAPOR INTERFACES **45**

3 Surface Energy **47**

- 3.1 Definition of Surface Energy and Thermodynamic Functions / 47
- 3.2 Correlation of Solid Surface Energy with Physical Properties / 53
- 3.3 Calculation of Surface Energy Using a Nearest Neighbor Broken-Bond Model / 55
- 3.4 They Plot / 60
- 3.5 The Wulff Plot and Wulff Construction / 63
 - 3.5.1 Wulff Plot / 63
 - 3.5.2 Wulff Construction / 63
- 3.6 Problems / 69

4 Surface Structure **71**

- 4.1 Terrace-Ledge-Rink Model of Surfaces / 71
- 4.2 Surface Defects and Surface Roughening / 75
 - 4.2.1 Analytical Treatment of Terrace and Ledge Roughening / 78
 - 4.2.2 Computer Calculation of the Equilibrium Structure of Crystal Surfaces / 83
- 4.3 Surface Crystallography / 86
- 4.4 Surface Relaxation and Reconstruction / 90
- 4.5 Phase Transformations and Surface Melting / 100
 - 4.5.1 Surface Phase Transformations / 102
 - 4.5.2 Surface Melting / 109
- 4.6 Particle Size, Surface Stress and Stability / 112
- 4.7 Problems / 123

5 Crystal Growth from the Vapor **127**

- 5.1 Continuous Growth / 127
- 5.2 Growth of Vicinal Surfaces / 127
 - 5.2.1 Sources of Ledges (Steps) / 129
 - 5.2.2 Two-Dimensional Nucleation and Growth / 129

5.2.3	Surface Diffusion / 133	
5.2.4	Crystal Growth by Ledge Motion / 137	
5.2.5	Crystal Growth by Screw Dislocations / 141	
5.2.6	Comparison with Experiment / 144	
5.3	Problems / 149	
6	Thermodynamics of Multicomponent Systems and Surface Segregation	150
6.1	Binary Systems-The Surface Excess / 150	
6.2	Gibb's Equation / 152	
6.3	Adsorption Isotherms / 155	
6.4	Surface Segregation / 156	
6.5	Alloy Surface Phase Transformations / 168	
6.6	Problems / 173	
7	Surface Films	176
7.1	Contact Angle, Wetting, Interfacial Energy and Work of Adhesion / 176	
7.2	Epitaxial Layers / 181	
7.2.1	Lattice Mismatch / 183	
7.2.2	Elastic Strain Energy / 185	
7.2.3	Stability of Heteroepitaxial Layers / 185	
7.2.4	Epitaxy Between Different Crystal Structures / 189	
7.3	Problems / 191	
	Part II References and Additional Reading	194
II	SOLID-LIQUID INTERFACES	201
B	Liquids	203
8.1	The Structure of Liquids / 203	
8.2	Properties of Liquids / 210	
8.2.1	Surface Energy of Liquids / 210	
8.2.2	Segregation in Liquids / 210	
8.2.3	Thickness of Liquid-Vapor Interface / 214	
8.3	Problems / 218	
9	Interfacial Structure and Energy	219
9.1	Solid/Liquid Interfacial Energy / 219	
9.2	Atomic Structure of the Solid-Liquid Interface / 224	

9.2.1	Spaepen's Model / 224	
9.3	Anisotropy of Solid-Liquid Interfacial Energy / 236	
9.4	Interfacial Roughening / 242	
9.4.1	Jackson's α Parameter / 242	
9.4.2	Kinetic Roughening / 246	
9.5	Problems / 253	
10	Crystal Growth from the Liquid	256
10.1	Continuous Growth / 256	
10.2	Lateral Growth / 258	
10.2.1	Ledge Velocity / 258	
10.2.2	Two-Dimensional Nucleation Rate / 259	
10.2.3	Mononuclear Growth Rate / 260	
10.2.4	Polynuclear Growth Rate / 261	
10.2.5	Screw Dislocation Growth / 262	
10.3	Comparison with Experiment / 263	
10.4	Problems / 268	
11	Solute Partitioning and Morphological Stability	269
11.1	Plane-Front Solidification of Pure Substances / 270	
11.1.1	Temperature Gradient and Interface Morphology / 270	
11.1.2	Heat Flow / 274	
11.2	Plane-Front Solidification of Single-Phase Alloys / 274	
11.2.1	Equilibrium Partition Ratio / 274	
11.2.2	Solute Redistribution During Solidification / 278	
11.2.3	Constitutional Supercooling and Cell Formation / 280	
11.2.4	Morphological (Mullins-Sekerka) Stability Theory / 282	
11.3	Problems / 288	
Part III	References and Additional Reading	290
IV	SOLID-SOLID INTERFACES	295
12	Introduction to Solid-Solid Interfaces	297
12.1	Types of Solid-Solid Interfaces / 298	
12.2	Atomic Matching at Solid-Solid Interfaces / 299	
12.3	Problem / 306	

13 Structure and Energy of Homophase Interfaces 307

- 13.1 Grain Boundary Energy / 307
- 13.2 Grain Boundary Structure / 309
 - 13.2.1 Dislocation Models / 309
 - Symmetrical Tilt Grain Boundary / 309
 - Asymmetrical Tilt Grain Boundary / 3 15
 - Twist Grain Boundary / 3 17
 - Degrees of Freedom of a General Grain Boundary / 3 19
 - Frank's Formula for the Dislocation Content of a Boundary / 322
 - 13.2.2 O-Lattice Formulation / 325
 - 13.2.3 Coincident Site and Displacement Shift Complete Lattices / 331
 - Coincident Site Lattice / 333
 - Displacement Shift? Complete Lattice / 337
 - Structure and Properties of Grain and Interphase Boundary Line Defects / 341
 - 13.2.4 Atomistic Modeling of Grain Boundary Structure and Energy /346
 - Structural (Polyhedral) Unit Model / 347
 - Structure-Energy Correlation / 349
 - 13.2.5 Stacking Faults and twin Boundaries / 355
 - 13.2.6 Roughening, Phase Transformations and Melting / 358
 - 13.2.7 TLK Model of Grain Boundary Motion / 360
 - 13.2.8 Segregation to Grain Boundaries / 365
- 13.3 Problems / 371

14 Structure and Energy of Heterophase Interfaces 377

- 14.1 Interphase Boundary Energy / 378
- 14.2 Coherent Interphase Boundary Structure and Energy / 379
 - 14.2.1 Becker Model / 379
 - 14.2.2 Cahn-Hilliard (Gradient Energy) Model / 380
 - 14.2.3 Discrete Lattice Plane Model / 386
- 14.3 Roughening and Phase Transformations at Interphase Boundaries / 394
- 14.4 Antiphase Boundaries / 400
- 14.5 Semicoherent Interphase Boundaries / 406
 - 14.5.1 Geometry of Semicoherent Interfaces / 408
 - 14.5.2 Energy of Semicoherent Interfaces /410
 - 14.5.3 Incoherent Interfaces / 415
 - 14.5.4 Comparison of the Compositional and Structural Components of the Interphase Boundary Energy / 4 16

14.5.5	Atomistic Modeling of Semicohherent Interphase Boundaries / 419	
14.6	Interfaces Between Phases with Different Bravais Lattices / 423	
14.6.1	Orientation Relationships at Heterophase Interfaces / 424	
14.6.2	High-Index Heterophase Interfaces / 428	
14.6.3	Atomistic Calculations / 435	
14.7	Terrace-Ledge-Kink Structure of Interphase Boundaries / 437	
14.8	Problems / 442	
15	Growth of Solid-Solid Heterophase Interfaces	448
15.1	Diffusion Versus Interface-Controlled Growth / 448	
15.2	Continuous Growth of a Planar Interface / 451	
15.3	Diffusion-Controlled Lengthening of Plates or Needles / 452	
15.4	Growth by Ledges / 453	
15.5	Ledge Interactions / 460	
15.6	Growth by Rinks in Ledges / 462	
15.7	Comparison with Experiment / 463	
15.8	Problems / 468	
16	Morphological Stability and Segregation	470
16.1	Morphological Stability / 470	
16.2	Segregation to Heterophase Interfaces / 475	
16.3	Problems / 480	
	Part IV References and Additional Reading	482
	Appendix A. Fundamental Constants and Conversion Factors	491
	Appendix B. Physical Data of the Elements	492
	Appendix C. Surface Data from Alonso and March	497
	Appendix D. Circle Patterns for Constructing Interfaces	500
	Index	505
