

CONTENTS

CHAPTER I

UNITS AND DIMENSIONS

SECT.	PAGE
1. Introduction - - - - -	1
2. Fundamental Units - - - - -	1
3. Derived Units - - - - -	2
4. Dimensional Analysis - - - - -	3
5. Dynamical Similarity - - - - -	4
6. Uses and Limitations of Dimensional Analysis - - - - -	4
7. Extension of Dimensional Analysis - - - - -	7
8. Examples of Dimensional Analysis - - - - -	8

CHAPTER II

THE ACCELERATION DUE TO GRAVITY

1. Introduction - - - - -	12
2. Simple Pendulum with Friction - - - - -	12
3. Pendulum with Finite Amplitude of Swing - - - - -	14
4. Pendulum with a Large Bob - - - - -	14
5. Compound Pendulum - - - - -	15
6. Accurate Measurement of g at a fixed station (Clark) - - - - -	17
7. Measurement of g at Sea - - - - -	19
8. Relative Measurement of g - - - - -	21
9. Variation of g with Time. Method of Tomaschek and Schaffernicht - - - - -	23
10. Changes of g with Position. The Boliden Gravimeter. The Gulf Gravimeter - - - - -	25
11. Changes of g with Direction. The Eötvös Torsion Balance - - - - -	29
12. The Gravity Gradient and Horizontal Directive Tendency - - - - -	33
13. Alteration in Direction of the Force of Gravity with Time. The Horizontal Pendulum - - - - -	34

CHAPTER III

THE NEWTONIAN CONSTANT OF GRAVITATION

1. Newton's Law of Gravitation - - - - -	37
2. Measurement of G . Boys' Method - - - - -	38

SECT.	PAGE
3. Measurement of G . Heyl's Method	40
4. Measurement of G . Zahradnick's Resonance Method	43
5. Measurement of G . Poynting's Method	46
6. Possible Variations in G	48
7. Relativity and the Law of Gravitation	49

CHAPTER IV

ELASTICITY

1. Introduction	51
2. Deviations from Hooke's Law	51
3. Moduli of Elasticity	53
4. Components of Stress and Strain	54
5. Strain Ellipsoid	54
6. Relations between the Elastic Constants	55
7. Principle of Superposition	57
8. Bending of Beams	58
9. Beams under Distributed Loads	59
10. Relation between Bending Moment and Deflection	59
11. Solutions of Beam Problems	60
12. Thin Rods under Tension or Thrust: Euler's Theory of Struts	61
13. Uniform Vertical Rod Clamped at Lower End. Distributed Load	62
14. Torsion of Rods	64
15. Energy in a Strained Body	66
16. Spiral Springs	67
17. Vibrations of Stretched Bodies	69
18. Experimental Determination of the Elastic Constants	71
19. Young's Modulus	72
20. Measurement of the Rigidity Modulus	74
21. Searle's Method for n and q	74
22. Determination of Poisson's Ratio	75
23. Optical Interference Methods for Elastic Constants	76
24. Variation of Elasticity with Temperature	79
25. Isothermal and Adiabatic Elasticities	80
26. Rayleigh's Three Reciprocal Relations	82

CHAPTER V

COMPRESSIBILITY OF SOLIDS AND LIQUIDS

1. Introduction. The Production of High Pressures	83
2. Measurement of High Pressures	84
3. Change in Volume of a Cylindrical Tube under Pressure	84
4. The Bulk Modulus of Solids	86

CONTENTS

xi

SECT.	PAGE
6. Compressibility of Liquids - - - - -	88
6. Behaviour of Solids and Liquids at High Pressures -	89
7. Fixed Points and the Construction of a Pressure Scale	90

CHAPTER VI

SEISMIC WAVES

1. Introduction - - - - -	91
2. Velocity of Longitudinal Waves - - -	91
3. Velocity of Transverse Waves - - - - -	94
4. Rayleigh Waves - - - - -	96
5. Long Waves - - - - -	96
6. Seismographs - - - - -	97
7. Horizontal Pendulum Seismograph (Galitzin) -	100
8. Position of the Epicentre - - - - -	101
9. Depth of Focus. Seebach's Method - - -	101
10. Geophysical Prospecting - - - - -	102
11. The Reflection Method of Seismic Prospecting -	103

CHAPTER VII

CAPILLARITY

1. Elementary Principles - - - - -	109
2. Shape of an Interfacial Boundary - - - - -	112
3. Rise of a Liquid along the Side of an Inclined Plane Plate	113
4. Rise of a Liquid between Two Vertical Plane Plates making a Small Angle with one another - - - - -	116
6. Rise of a Liquid between Parallel Vertical Plates - - - - -	119
6. Rise of a Liquid between Two Parallel Vertical Plates close together - -	121
7. Horizontal Force on One Side of a Vertical Plane Plate Dipping in a Liquid	122
8. Horizontal Force on One of Two Parallel Vertical Plates Dipping in a Liquid	123
9. Rise of a Liquid in a Vertical Circularly Cylindrical Tube (Narrow Tube: Angle of Contact not Zero) - - - - -	124
10. Rise of a Liquid in any Vertical Circularly Cylindrical Tube Dipping into an Open Vessel of Liquid (Angle of Contact not Zero) - - - - -	126
11. Application to the Measurement of Surface Tension - - - - -	126
12. Measurement of the Surface Tension of a Liquid Available only in very Small Quantity - - - - -	128
13. Pendant Drop at the End of a Tube - - - - -	130
14. Senti's Method of Measuring the Surface Tension of a Liquid - - - - -	132
15. Drop Weight Method of Measuring the Surface Tension of a Liquid. Method of Harkins and Brown - - - - -	133
16. Force on a Horizontal Disc Pulling a Liquid Upwards - - - - -	134
17. Liquid pulled Upwards by a Horizontal Flat Ring. Extra Downward Force on the Ring - - - - -	136

SECT.	PAGE
18. Measurement of Surface Tension by the Ring Method	137
19. Measurement of the Rate of Spreading of a Substance over the Surface of a Liquid	138
20. Lenard's Frame Method for Surface Tension	139
21. Determination of the Surface Tension of a Liquid from the Maximum Pressure in Bubbles (often called Jager's Method)	141
22. Experimental Details of Jager's Method	146
23. Excess Pressure Inside a Spherical Bubble or Drop	146
24. Surface Tension of a Liquid found by Measurements on Stationary Drops and Bubbles	147
26. Contact of Solids, Liquids, and Gases	161
26. Measurements of the Angle of Contact between a Solid and a Liquid	164
27. Measurement of Interfacial Surface Tensions	167
28. Ripples, and Velocity of Gravity Waves on a Deep Liquid	168
29. Effect of Surface Tension on the Velocity of Gravity Waves	169
30. Measurement of Surface Tension by the Ripple Method	161
31. Stability of a Cylindrical Film	162
32. Jets	164
33. Measurement of Surface Tension by means of Jets	166
34. Criticism and Comparison of Various Methods of Measuring Surface Tension	167
36. Temperature Relations of Surface Tension	168
36. Thermodynamics of a Film	169
37. Relations connecting Surface Tension and Other Quantities	171
38. Molecular and Other Theories of Capillarity	172

CHAPTER VIII

SURFACE FILMS

1. Surface Films of Insoluble Substances	178
2. Measurement of Surface Pressures and Areas	182
3. Surface Films of Solutions	183
4. Gibbs's Adsorption Formula	184
6. Gibbs's Equation in the case of Ionized Solutes. (Theory of G. N. Lewis)	186
6. Pressure-Area Relations of Surface Films of Solutions	188

CHAPTER IX

KINETIC THEORY OF MATTER

1. Introduction	190
2. Transport Theorems and the Mean Free Path of a Gas Molecule	191
3. Properties of Gases at Low and Intermediate Pressures	197
4. Properties of Gases at High Pressures; the Size of the Molecules	207
6. Determination of Loschmidt's Number and the Molecular Diameter	209
6. Production of High Vacua	218
7. Measurement of Low Pressures	223

CHAPTER X

OSMOTIC PRESSURE

SECT.	PAGE
1. Osmotic Pressure of Solutions - - - - -	231
2. The Osmotic Pressure of a Dilute Solution is Proportional to the Absolute Temperature - - - - -	233
3. Difference between the Vapour Pressure of a Pure Solvent and that of a Dilute Solution - - - - -	234
4. Difference between the Boiling Point of a Pure Solvent and that of a Dilute Solution - - - - -	235
5. Difference between the Freezing Point of a Pure Solvent and that of a Dilute Solution - - - - -	236
6. Measurement of Osmotic Pressure - - - - -	237
7. Raoult's Law - - - - -	242
8. Two Classes of Electrolytes - - - - -	243
9. Modern Views of Osmotic Pressure - - - - -	243
10. Debye and Hückel's Theory of Strong Electrolytes - - - - -	244
11. Solutions of Strong Electrolytes of any Type - - - - -	250
12. More Exact Theory - - - - -	253

CHAPTER XI

DIFFUSION

1. Diffusion in Liquids - - - - -	255
2. Measurement of the Diffusivity of a Solute in a Liquid. Fürth and Zuber's Method - - - - -	256
3. Osmotic Pressure and Diffusion - - - - -	263
4. Interdiffusion of Solids - - - - -	266

CHAPTER XII

VISCOSITY

1. Newton's Law of Viscous Flow - - - - -	267
2. Fugitive Elasticity - - - - -	267
3. Methods of Determining η - - - - -	268
4. Flow Methods: Poiseuille's Formula - - - - -	268
5. Corrections to Poiseuille's Formula - - - - -	270
6. Critical Velocity - - - - -	271
7. Accurate Determination of η - - - - -	272
8. Other Methods for Measuring η - - - - -	274
9. The Rotation Viscometer - - - - -	274
10. Stokes's Felling-body Viscometer - - - - -	276
11. Viscosity of Gases - - - - -	277
12. Variation of the Viscosity of Fluids with Pressure - - - - -	281

SECT.	PAGE
13. Variation of Viscosity of Fluids with Temperature - - - -	282
14. Viscosity of Mixtures and Solutions; Variation with Chemical Constitution -	283
15. Non-Newtonian Fluids - - - - -	284
16. Special Plastometers - . . - - - - -	285

CHAPTER XIII

ERRORS OF MEASUREMENT; METHODS OF
DETERMINING PLANCK'S CONSTANT

1. Introduction - - - - -	287
2. The Gaussian or Normal Error-distribution Law - - - - -	287
3. Measurement of a Single Quantity. Probable Error - - - - -	289
4. Probable Error or Dispersion of a Single Observation - - - - -	290
5. The Weighting of Observations - - - - -	291
6. Calculation of the Constants in the Linear Law $y = mx + c$ - - - - -	292
7. Probable Error of a Function of Quantities Measured Experimentally -	295
8. Determination of Planck's Constant - - - - -	295
9. Method based on Bohr's Theory of Atomic Structure - - - - -	296
10. Ionization Potential Method - - - - -	296
11. X-ray Continuous Spectrum Method - - - - -	297
12. Photoelectric Method - - - - -	298
13. Wien's Displacement Law Method - - - - -	299
14. Stefan's Law Method - - - - -	299
15. Eddington's Fine-Structure Constant Method - - - - -	299
16. Electron Diffraction Method (Velocity obtained from the Accelerating Potential) - - - - -	300
17. Electron Diffraction Method (Velocity Measured Directly) - - - - -	301
18. Compton Shift Method - - - - -	302
19. Bond's Method - - - - -	302
EXAMPLES - - - - -	307
ANSWERS AND HINTS FOR SOLUTION - - - - -	315
INDEX - - - - -	321
