PREFACE TO THE IMPERIAL COLLEGE PRESS EDITION . . . ix

PREFACE xi

INTRODUCTION: THE THEORY OF CONDENSED MATTER . . . xiii

CHAPTER 1 LATTICE DYNAMICS IN THE HARMONIC APPROXIMATION 1

1.1 The ground state energy 2
1.2 The ground state energy as an integral over coupling constant 6
1.3 The neutron scattering cross-section 7
1.4 The Green's function and its equation of motion 10
1.5 The iteration solution of G 15
1.6 Summation of the iteration series 20
1.7 Calculation of the ground state energy and the neutron cross-section in terms of the phonon Green's function 25

CHAPTER 2 LATTICE DYNAMICS AT FINITE TEMPERATURES 29

2.1 The free energy in the harmonic approximation 30
2.2 The phonon temperature Green's function 34
2.3 The real-time Green's function and neutron scattering at finite temperatures 41

CHAPTER 3 THE FEYNMAN–DYSON EXPANSION 45

3.1 Zero-temperature theory: general formalism 47
3.2 Evaluation of the phonon Green's function at $T = 0$ by Feynman–Dyson perturbation theory 54
3.3 The Feynman–Dyson expansion at finite temperatures 60
3.4 Direct evaluation of the free energy by Feynman-Dyson perturbation theory 64

CHAPTER 4 THE SCATTERING OF FERMIONS BY A LOCALIZED PERTURBATION 68

4.1 Scattering of a single electron 69
4.2 Formulating of the many-electron scattering problem in terms of fermion creation and annihilation operators 71
4.3 Single-electron Green's function 73

4.4 Closed solution for short-range potential 78
4.5 The Friedel sum rule 81
4.6 Many-electron formulation of the Friedel sum rule . . . 85
4.7 Effect of impurities on thermodynamic properties of the electron gas 90

CHAPTER 5 ELECTRONS IN THE PRESENCE OF MANY IMPURITIES — THE THEORY OF ELECTRICAL RESISTANCE IN METALS 96
5.1 The physics of irreversible behavior 96
5.2 One-electron Green's function in a many-impurity system 98
5.3 Dyson's equation 103
5.4 One-electron Green's function in low-density weak scattering approximation 104
5.5 Theory of electrical conductivity-linear response formulation . 109
5.6 Evaluation of the Kubo formula for the many-impurity problem . 113
5.7 Solution of the integral equation for the response function . 117

CHAPTER 6 THE INTERACTING ELECTRON GAS 123
6.1 The Hartree-Fock approximation . . . 124
6.2 Calculation of the exchange contribution to the ground state energy of the electron gas 130
6.3 Derivation of the Hartree-Fock approximation from a perturbation expansion of G 132
6.4 The dielectric response function of a dense electron gas . . 141
6.5 The particle-hole Green's function and the random phase approximation for the dielectric response . . . 144
6.6 The r.p.a. calculation of the correlation energy. . . . 152

CHAPTER 7 THE MAGNETIC INSTABILITY OF THE INTERACTING ELECTRON GAS 157
7.1 The Hubbard model 158
7.2 The Kubo formula for the susceptibility tensor . . . 160
7.3 Evaluation of the susceptibility in the r.p.a. . . . 162
7.4 The instability criterion 165
7.5 Neutron scattering and the $\mathbf{q},\omega$-dependent generalized susceptibility function 168
7.6 Paramagnon contribution to low-temperature specific heat . 171
7.7 The ferromagnetic state 173
7.8 Localized magnetic states in metals. . . . 176

CHAPTER 8 INTERACTING ELECTRONS IN THE ATOMIC LIMIT . 184
8.1 The atomic limit of the Hubbard model 185
8.2 The transition between the atomic limit and the band limit . 187
8.3 The insulating magnet 189

CHAPTER 9 TRANSIENT RESPONSE OF THE FERMI GAS — THE X-RAY AND KONDO PROBLEMS 198
9.1 The x-ray singularity seen in photoemission 200
9.2 The nature of the x-ray singularity 203
9.3 The edge singularity in soft x-ray absorption and emission experiments 208
9.4 Atomic limit for localized magnetic moments in metals — the Kondo effect 212
9.5 Temperaturedependent electrical resistivity due to a magnetic impurity 215

CHAPTER IO SUPERCONDUCTIVITY 220
10.1 The Cooper pair instability of the fermi gas 220
10.2 The superconducting instability at finite temperatures . . 222
10.3 The superconducting ground state 228

CHAPTER 11 STRONG CORRELATED ELECTRON SYSTEMS: HEAVY FERMIONS; THE l-DIMENSIONAL ELECTRON GAS . . 235
11.1 Heavy Fermions and Slave Bosons 235
11.2 The Single Impurity Case 238
11.3 The physical electron propagator expressed in terms of the pseudo-Fermion Green's function 242
11.4 Instabilities of heavy fermion systems: antiferromagnetic and superconducting states 244
11.5 Strong correlations in the one-dimensional electron gas: spinons and holons 250

CHAPTER 12 HIGH T_c SUPERCONDUCTIVITY 259
12.0 Introduction 259
12.1 Effective Hamiltonian for the cuprate compounds . . . 259
12.2 Effects of correlations in the CuO_2 planes 263
12.3 Projection to a One Band Model: the Hubbard and t-J Models 267
12.4 Superconductivity in the Cuprates: the d-wave BCS State . . 269
12.5 Strong Correlation Effects in 2-D Fermi Systems . . . 275

APPENDIX 1 SECOND QUANTIZATION FOR FERMIONS AND BOSONS 283

APPENDIX 2 TIME CORRELATION FUNCTIONS AND GREEN'S FUNCTIONS 290

BIBLIOGRAPHY 296

HISTORICAL NOTE ON GEORGE GREEN 309
