

CONTENTS

11	INTRODUCTION	1
	1.1. Background	1
	1.2. Objectives	2
	1.3. Scope and structure	3
2.	PRINCIPLES OF ION EXCHANGE PROCESSES	4
	2.1. General	4
	2.2. Ion exchange equilibrium and selectivity	5
	2.3. Ion exchange and sorption	7
	2.4. Ion exchange capacity	7
	2.5. Kinetics and dynamics	8
	2.6. Limitations of ion exchanger applications	11
3.	ION EXCHANGE MATERIALS	12
	3.1. General	12
	3.2. Naturally occurring ion exchangers	14
	3.2.1. Natural inorganic ion exchangers	14
	3.2.2. Natural organic ion exchangers	16
	3.2.3. Modified natural ion exchangers	16
	3.3. Synthetic ion exchangers	17
	3.3.1. Synthetic inorganic ion exchangers	17
	3.3.1.1. Zeolites	17
	3.3.1.2. Titanates and silica-titanates	18
	3.3.1.3. Transition metal hexacyanoferrates	19
	3.3.2. Synthetic organic ion exchangers	19
	3.3.2.1. Polystyrene divinylbenzene	20
	3.3.2.2. Phenolic	21
	3.3.2.3. Acrylic	21
	3.4. Composite ion exchangers	21
	3.5. Ion exchange membranes	22
4.	APPLICATION OF ION EXCHANGE TECHNIQUES FOR THE TREATMENT OF RADIOACTIVE LIQUIDS	23
	4.1. General considerations	23

4.2. Factors of importance in the selection of ion exchangers and application techniques	24
4.2.1. Waste characteristics	24
4.2.2. Selection of ion exchanger and treatment process	25
4.2.3. Cost considerations	26
4.3. Ion exchange application techniques	26
4.3.1. Batch operation	27
4.3.2. Column operation	29
4.3.3. Membrane systems	34
4.3.3.1. Electrodialysis	34
4.3.3.2. Continuous electrodeionization	36
4.3.3.3. Electrochemical ion exchange	37
4.4. Ion exchanger regeneration options	38
4.5. Handling spent ion exchange media	39
4.6. Integration with other waste treatment systems	41
5. MANAGEMENT OF SPENT ION EXCHANGE MATERIALS	41
5.1. Introduction	41
5.2. Storage	43
5.2.1. Storage for decay	43
5.2.2. Storage pending final treatment and/or disposal	44
5.3. Pretreatment	44
5.3.1. Dewatering	45
5.3.2. Drying and heating	45
5.3.3. Crushing and grinding	46
5.3.4. Foam preparation	47
5.3.5. Decontamination by activity stripping	47
5.3.5.1. The PILO process	47
5.3.5.2. Stripping for ¹⁴ C removal	48
5.3.5.3. Acid stripping	4
5.3.5.4. Thermal stripping	48
5.4. Destructive methods for spent resin treatments	49
5.4.1. Thermal processes	49
5.4.1.1. Pyrolysis	49
5.4.1.2. Incineration	51
5.4.2. Chemical processes	55
5.4.3. Other methods	57
5.4.4. Summary	58
5.4.5. Other methods	58
5.4.6. Summary	60

5.4.2. Other treatment methods	61
5.4.2.1. Acid digestion	62
5.4.2.2. Wet oxidation	62
5.4.2.3. Molten salt oxidation	63
5.4.2.4. Electrochemical oxidation	63
5.4.2.5. Barix process	64
5.4.2.6. Thermochemical treatment	64
5.4.3. Processes under development	65
5.5. Considerations for secondary waste resulting from destruction processes	65
5.5.1. Incinerator ash	66
5.5.2. Wet residues	66
 6. DIRECT IMMOBILIZATION AND ENCAPSULATION OF SPENT ION EXCHANGERS	 66
 6.1. Cement immobilization	 68
6.1.1. Cement types used for immobilization	69
6.1.2. Preparation for immobilization in cement	70
6.1.3. Cementation process	72
6.2. Bitumen immobilization	73
6.2.1. Bitumen types used for immobilization	74
6.2.2. Preparation for immobilization in bitumen	75
6.2.3. Bitumenization processes	75
6.2.3.1. Batch bituminization process	76
6.2.3.2. Continuous bituminization processes	76
6.3. Polymer immobilization	76
6.3.1. Preparation for immobilization in polymers	77
6.3.2. Polymer immobilization processes	78
6.3.2.1. Epoxy resins	80
6.3.2.2. Polyester	80
6.3.2.3. Polyethylene	81
6.3.2.4. Polystyrene and copolymers	81
6.3.2.5. Urea formaldehyde	81
6.3.2.6. Polyurethane	82
6.4. Immobilization in high integrity containers	82
6.5. Properties of immobilized waste forms	83
6.5.1. Mechanical properties	85
6.5.2. Resistance to biodegradation	85
6.5.3. Thermal stability	86
6.5.4. Leaching behaviour	86

6.5.5. Radiation stability and gas generation	87
7. CONSIDERATIONS FOR THE STORAGE AND/OR DISPOSAL OF IMMOBILIZED ION EXCHANGE WASTE	88
7.1. Waste acceptance criteria	88
7.1.1. Acceptance criteria for waste packages	88
7.1.2. Acceptance criteria for waste transportation	89
7.1.3. Acceptance criteria for interim storage	89
7.1.4. Acceptance criteria for final disposal	89
7.2. Influence of storage and/or disposal requirements on the choice of conditioning process	90
7.2.1. Life cycle plan	90
7.2.2. Economics	91
7.2.3. Waste volume	91
7.2.4. Long term stability	92
7.2.4.1. Chemical and radiological stability	92
7.2.4.2. Structural integrity	93
7.2.5. Waste handling	94
8. FUTURE TRENDS AND DEVELOPMENTS IN THE USE AND MANAGEMENT OF ION EXCHANGERS	94
8.1. Considerations of minimum lifetime (or life cycle) cost	94
8.2. Developments in the selection of ion exchange processes	95
8.2.1. Materials	95
8.2.2. Process arrangements	96
8.2.3. Plant design philosophy	96
8.3. Development of spent ion exchange media treatment technologies ..	97
9. CONCLUSIONS	98
