|       | C. Optical properties . . . . .   | 90  |
| VIII. | Experimental work on a prototype lens element . . . . .   | 100 |
|       | A. Fabrication of the lens element . . . . .  | 101 |
|       | B. The capacitive alignment procedure in practice . . . . .   | 102 |
|       | C. The prototype lens element using $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$ thin films . . . . .                          | 109 |
| IX.   | Conclusions and future perspectives: the present state of high-T <sub>c</sub> superconductors in particle optics. . . . . | 110 |
|       | A. Potential applications . . . . .   | 113 |
|       | Acknowledgements . . . . .  | 116 |
|       | References . . . . .  | 116 |

## Microspectrofluorometry

J. G. HIRSCHBERG, E. KOHEN and C. KOHEN

|      |   |     |
|------|---|-----|
| I.   | Introduction. . . . .   | 121 |
| II.  | Fluorescence. . . . .   | 122 |
|      | A. Definition . . . . .   | 122 |
|      | B. History . . . . .  | 125 |
|      | C. Advantages of fluorescence for analysis . . . . .  | 126 |
| III. | Fluorescence microspectroscopy . . . . .  | 127 |
|      | A. Emission spectra . . . . .   | 127 |
|      | B. Excitation fluorescence spectra . . . . .  | 132 |
| IV.  | Applications. . . . .   | 134 |
|      | A. Non-invasive probing of cell metabolism . . . . .  | 134 |
|      | B. Probing of cell organelles and cytoskeleton . . . . .  | 137 |
|      | C. Probing of cell cations . . . . .  | 160 |
|      | D. Latest probing methods . . . . .   | 168 |
| V.   | New fluorescence methods . . . . .  | 174 |
|      | A. Fluorescence recovery after photobleaching (fluorescence photobleaching recovery) . . . . .                | 174 |
|      | B. Total reflection fluorescence . . . . .  | 178 |
|      | C. Polarized fluorescence photobleaching recovery . . . . .   | 180 |
|      | D. Ratio imaging. . . . .   | 180 |
|      | E. Quantitative fluorescence imaging . . . . .  | 183 |
|      | F. Multiwavelength three-dimensional imaging by <b>confocal</b> microscopy and image reconstruction . . . . . | 184 |
|      | G. Fluorescence resonance energy transfer . . . . .   | 189 |
|      | H. Phosphorescence and delayed fluorescence imaging. . . . .  | 191 |
|      | I. Fluorescence relaxation microscopy. . . . .  | 196 |
|      | J. <b>Confocal Raman</b> microspectroscopy . . . . .  | 198 |
|      | K. Fluorescence lifetime imaging . . . . .  | 199 |
| VI.  | Conclusions . . . . .   | 204 |
|      | Acknowledgements . . . . .  | 205 |

# The Optical Computed Tomography Microscope

SATOSHI KAWATA

|       |  |     |
|-------|--|-----|
| I.    | Introduction.  | 213 |
|       | A. 3D microscopy   | 214 |
|       | B. Review of tomography microscopy.                                | 215 |
| II.   | Optics   | 218 |
|       | A. Projection optics   | 218 |
|       | B. Optical transfer function                                       | 220 |
| III.  | Reconstruction mathematics.  | 222 |
|       | A. System and problem: missing cone and regularized reconstruction | 222 |
|       | B. Support-constrained reconstruction.                             | 225 |
|       | C. Non-negative-constrained reconstruction                         | 226 |
| IV.   | System configuration   | 229 |
|       | A. Basic system with a rotational off-axial aperture               | 229 |
|       | B. Laser CT microscope   | 230 |
|       | C. Experiments   | 233 |
| V.    | Multispectral CT microscope  | 237 |
|       | A. Principle and theory  | 237 |
|       | B. Experiments   | 239 |
| VI.   | Multiview CT microscope  | 242 |
| VII.  | Phase CT microscope  | 243 |
| VIII. | Concluding note  | 246 |
|       | Acknowledgements   | 247 |
|       | References   | 247 |

## Microscope Objective Design

YOSHIYUKI SHIMIZU and HIROSHI TAKENAKA

|      |   |     |
|------|---|-----|
| I.   | Introduction.   | 249 |
| II.  | Basic knowledge   | 250 |
|      | A. Focal points and focal lengths                           | 251 |
|      | B. Magnification  | 253 |
| III. | Ideal image   | 254 |
|      | A. Resolution   | 254 |
| IV.  | Aberrations   | 257 |
|      | A. Spherical aberration                                     | 258 |
|      | B. Astigmatism, curvature of field and coma                 | 260 |
|      | C. Distortion   | 267 |
|      | D. Chromatic aberration                                     | 267 |
| V.   | Correction of chromatic aberrations                         | 270 |
|      | A. Correction of axial chromatic aberration                 | 270 |
|      | B. Achromat and apochromat                                  | 277 |
|      | C. Correction of lateral chromatic aberration               | 278 |
| VI.  | Correction of monochromatic aberrations                     | 281 |
|      | A. Correction of spherical aberration                       | 282 |
|      | B. Lateral chromatic aberration of the microscope objective | 288 |

- C. Correction of the image plane . . . . . 290
- D. Correction of the curvature of field in a microscope objective . . . . . 294
- VII. Current status and methodology of lens design . . . . . 298
- VIII. Correction of aberrations due to the cover glass . . . . . 301
- IX. Correction of chromatic aberration due to the secondary spectrum . . . . . 309
- X. Long working distance microscope objectives . . . . . 320
- XI. Objectives for reflected fluorescent observation . . . . . 326
- XII. Features of microscope objectives . . . . . 329
  - A. Telecentric optical system . . . . . 329
  - B. Characteristics of aberration . . . . .
- XIII. Concluding remarks . . . . . : 332 333
  - Further reading . . . . . 334
- I NDEX . . . . . 335**
