

Contents

<i>Series Introduction</i>	iii
<i>Preface</i>	v
<i>Preface to the First Edition</i>	vii
1. Introduction	1
2. Designs of Bioavailability Studies	31
3. Statistical Inferences for Effects from a Standard 2 x 2 Crossover Design	57
4. Statistical Methods for Average Bioavailability	79
5. Power and Sample Size Determination	125
6. Transformation and Analysis of Individual Subject Ratios	161
7. The Assessment of Inter- and Intrasubject Variabilities	187
8. Assumptions and Outliers Detection	221
9. Optimal Crossover Designs for Two Formulations	257
10. Assessment of Bioequivalence for More Than Two Formulations	303
11. Assessment of Bioequivalence for Drugs with Negligible Plasma Levels	333
12. Some Related Problems in Bioavailability Studies	361
13. Meta-Analysis for Bioequivalence Review	379

14. Population and Individual Bioequivalence	401
15. Statistical Procedures for Assessment of Population and Individual Bioequivalence	443
16. Review of FDA Guidances	489
<i>References</i>	521
<i>Appendix A: Statistical Tables</i>	537
<i>Appendix B: SAS Programs</i>	557
<i>Index</i>	577
