I Lectures 1

(Half) a Lecture on D-Branes . . . 3
C. Bachas
1 Introduction . . . 3
2 Ramond-Ramond fields . . . 3
2.1 Chiral Bispinors . . . 3
2.2 Free Field Equations . . . 5
2.3 No RR Charges in Perturbation Theory . . . 6
3 D(irichlet) branes . . . 8
3.1 Definition . . . 8
3.2 Static Force: Field-Theory Calculation . . . 9
3.3 Static Force: String Calculation . . . 11
3.4 Charge Quantization . . . 13
4 Gauge Theory and Geometry . . . 15
4.1 Non-commutative Space-time . . . 15
4.2 T-duality . . . 16
4.3 The Power of Lorentz Invariance . . . 18

Supermembranes: An Introduction . . . 23
M. J. Duff
1 Supermembranes . . . 23
1.1 Bosonic p-branes . . . 25
1.2 Super p-branes . . . 28
1.3 The brane scan . . . 30
1.4 String/fivebrane duality in $D = 10$? . . . 32
1.5 Type IIA superstring in $D = 10$ from supermembrane in $D = 11$ . . . 33
1.6 The signature of spacetime . . . 35
1.7 Twelve dimensions? . . . 42
1.8 Type II p-branes: the brane scan revisited . . . 43

2 Aspects of quantization . . . 48
2.1 The lightcone gauge: area-preserving diffeomorphisms . 48
2.2 Massless states and anomalies . . . 50

On Non-Perturbative Results in Supersymmetric Gauge Theories – A Lecture . . . 56
A. Giveon
1 Introduction . . . 56
2 The Low-Energy Effective Theory . . . 58
2.1 The Effective Superpotential . . . 59
2.2 The Gauge "Kinetic Term" in a Coulomb Phase . . . 59
2.3 The "Kinetic Term" . . . 60
3 Summary of Results in $N = 1$ Supersymmetric $SU(2)$ Gauge Theories . . . 60
4 $b_1 = 6$: $N_f = N_A = N_{3/2} = 0$ . . . 62
5 $b_1 = 5$: $N_f = 1$, $N_A = N_{3/2} = 0$ . . . 63
6 $b_1 = 4$ . . . 65
7 $b_1 = 3$ . . . 67
8 $b_1 = 2$ . . . 70
9 $b_1 = 1$ . . . 76
10 $b_1 = 0$ . . . 78
11 More Results . . . 81

Duality in String Theory . . . 84
S. Förste, J. Louis
1 Introduction . . . 84
2 Perturbative string theory . . . 85
3 T–duality . . . 87
4 S–duality . . . 90
4.1 $N = 4$ Yang-Mills theories in four space-time dimensions 90
4.2 S–duality between Type I and Heterotic $SO(32)$ . . . 94
5 U–duality . . . 95
6 M-theory . . . 97
6.1 Type IIA and M-theory . . . 97
6.2 Heterotic $E_8 \times E_8$ string from M-theory . . . 98
7 String compactifications with broken supercharges in six space-time dimensions . . . 99
7.1 The $K3$ surface . . . 99
7.2 Supergravities on $K3$ . . . 100
7.3 Type IIB compactified on K3 . . . 101
7.4 Type IIA compactified on K3 . . . 102
7.5 Heterotic strings on T^4 . . . 102

7.6 Singularities in the moduli space 103
7.7 The heterotic string compactified on K3 104
7.8 F-theory. 108
7.9 Heterotic – heterotic duality 108
8 String compactifications with broken supercharges in four space-time dimensions. 109
8.1 $N = 2$ supergravity 109
8.2 The heterotic string compactified on $K3 \times T^2$ 111
8.3 Type II vacua compactified on Calabi-Yau threefolds . . 112
8.4 Heterotic – type II duality 113
9 Conclusion 113
Superstrings and Physics? 122
F. Quevedo
1 Introduction 122
2 String Model Building 125
2.1 Toroidal Compactifications 127
2.2 Orbifold Compactifications 130
2.3 Calabi-Yau compactifications 133
2.4 Fermionic, Bosonic and Coset Constructions 135
3 Effective Actions in 4D 137
3.1 Tree-level Couplings 139
3.2 Loop Corrections 143
4 Model Independent Results 145
5 Supersymmetry Breaking 149
5.1 Gaugino Condensation 150
5.2 Soft SUSY Breaking Terms 154
5.3 Scenarios for SUSY Breaking 156
6 Strong/Weak Coupling Dualities 159
7 Discussion Session 162
