PREFACE

xi

Section 1 The Practical Basics of Spectrometry

1. Optical Spectrometers

Jerry Workman, Jr.

I. Introduction	4
II. Types of Spectrometers	5
III. Details of Spectrometer Components	10
IV. Properties of Spectrometers	18
References	27
Further Reading	28

2. Ultraviolet, Visible, and Near-Infrared Spectrometry

Jerry Workman, Jr.

I. Introduction	29
II. Instrumentation	30
III. Sampling Considerations	36
IV. Applications	38
Further Reading	47

3. A Review of Sampling Methods for Infrared Spectroscopy

John Coates

I. Introduction	50
II. General Considerations	51
III. Sample Type versus Sampling Method	53
IV. Sampling Method versus Sample Type	62
V. Sample Modification and/or Purification Methods	79
VI. Recommended Spectrum Acquisition, Presentation Format, and Data Manipulation Procedures	85
VII. Summary	89
References	89

4. Spectroscopic Quantitative Analysis

James H. Duckworth

I. What is “Chemometrics”?	93
II. The Beer-Lambert Law	94
III. Classical Quantitation Methods	95
IV. Eigenvector Quantitation Methods	107

5. Spectroscopic Qualitative Analysis

James H. Duckworth

I. Discriminant Analysis	166
II. Simple Spectrum Matching Methods	168
III. Other Methods	170
IV. The Mahalanobis Distance with PCA	171
V. Coupling Mahalanobis Distance with PCA	176

Section 2 Reflectance Measurements of Solids

6. Reflectance Spectroscopy: An Overview of Classification and Techniques

Art Springsteen

I. Relative Specular Measurements	194
II. Absolute Specular Reflectance	198
III. Sample Preparation and Handling	202
IV. Diffuse and Total Reflectance	202
V. Integrated Sphere Measurements of Diffuse Reflectance	203
VI. Integrated Sphere Geometries	205
VII. Nonintegrating Sphere Methods	210
VIII. Diffuse/Directional Measurement of Reflectance	212
IX. Directional/Directional Diffuse Reflectance Measurements	216
X. Goniospectrophotometric Measurement of Reflectance	218
XI. Reflectance Measurement Techniques	220
References	223

7] Spectroscopy of Solids*Jerry Workman, Jr.*

I. Introduction	225
II. The Physics of Light Interaction with Solid Materials	226
III. Devices Used for Spectroscopy of Solids	229
IV. Applications for Spectroscopy of Solids	232
V. Conclusions	245
References	245

8. Standards for Reflectance Measurements*Art Springsteen*

I. Specular Standards	249
II. Diffuse Reflectance Standards	251
III. Mid-Infrared Diffuse High-Reflectance Standards	258
IV. Gray Scale Standards for UV-VIS-NIR	259
V. Mid-Infrared Gray Scale Standards	261
VI. Color Standards	261
VII. Wavelength Calibration Standards	262
References	265

9. Reflectance Measurements of Diffusing Surfaces Using Conic Mirror Reflectometers*Keith A. Snail and Leonard M. Hanssen*

I. Introduction	269
II. Terminology	271
III. Historical Overview	273
IV. Measurement Geometries	276
V. Sources of Error	278
VI. Summary and Conclusions	296
References	296

10. Bidirectional Reflectance Distribution Function as a Measure of Optical Scatter*S. H. C. P. McCall*

I. Introduction: Significance and Use of the Bidirectional Reflectance Distribution Function	299
II. Terminology and Definition of BRDF	302

III. Interpreting BRDF Light Scatter Measurements	308
Iv. Summary	321
Appendix	321
References	323
Additional Sources	324

Section 3 Practical Application of Spectroscopic Measurement

11. Selecting a Spectroscopic Method by Industrial Application

Emil W. Ciurczak

I. The Process	329
II. The Product	333
III. The Measurement Procedure	336
IV. Summary and Conclusions	341
References	342

12. Color and Solar Transmittance Measurements

J. Murray Stewart

I. Introduction	344
II. Current Color Spectrophotometer Principles and Geometries	346
III. Instrument Applications	352
IV. Measurement Techniques	359
V. Mathematical Considerations	365
VI. Pitfalls: User Techniques	374
VII. Limitations: Instruments and Techniques	377
VIII. Advances Needed	381
References	383

13. Optical Spectroscopy of New Materials

Susan White

I. Background	389
II. Current State of the Art	390

III. Current Applications	391
IV. Pitfalls of Techniques for Basic Users	393
V. Limitations of Current Instrumentation and Techniques	395
VI. Advances Needed in the Field	396
References	396

14. Spectroscopy of Ceramics

James F. Cordaro

I. Introduction	399
II. Scattered Light and Its Relationship to Reflectance of Ceramics	400
III. Reflected Light from Opaque Ceramics	405
IV. Transmitted Light through Ceramic Crystals	413
V. Mechanisms of Optical Absorption in Ceramics	415
References	421

15. Spectroscopy Using Flowing Systems for Chemical, Pharmaceutical, and Biological Applications

Emil W. Ciurczak

I. Defining the Sample/System	423
II. Choosing the Appropriate Measuring Instrumentation	426
III. Applications	431
IV. Conclusion	435
References	435

16. Textile Application of Molecular Spectroscopy

Subhas Ghosh

I. Introduction	437
II. Textile Test Specimens	438
III. Applications in Greige Manufacturing Processes	438
IV. Thermal History of Synthetic Fibers	444
V. Fabric Finishing Application: Durable Press Resin on Fabrics	446
VI. Application of Infrared Spectroscopy in Textiles	450
References	457

17. Solar Measurements*J. Murray Stewart*

I. Introduction	459
II. Spectrophotometer : Principles and Geometries	461
III. Instrument Applications	466
IV. Measurement Techniques	474
V. Mathematical Considerations	478
VI. Basic User Technique Pitfalls	481
VII. Limitations	486
VIII. Advances Needed	487
References	489
Appendix A : Sources, Detectors, and Window Materials for UV-VIS, NIR, and IR Spectroscopy	493
Appendix B : Practices of Data Preprocessing for Optical Spectrophotometry	497
Appendix C : Infrared Microspectroscopy	507
Appendix D : Diffuse Transmittance and Optical Geometry	513
Appendix E : Dichroic Measurements of Polymer Films Using Infrared Spectrometry	525
INDEX	531
