

Contents

Preface	xi
Scaling in Biology: Patterns and Processes, Causes and Consequences <i>James H. Brown, Geoffrey B. West, and Brian J. Enquist</i>	1
Allometry and Natural Selection <i>John Tyler Bonner and Henry S. Horn</i>	25
Hovering and Jumping: Contrasting Problems in Scaling <i>R. McNeill Alexander</i>	37
Scaling of Terrestrial Support: Differing Solutions to Mechanical Constraints of Size <i>Andrew A. Biewener</i>	51
Consequences of Size Change During Ontogeny and Evolution <i>Mimi A. R. Koehl</i>	67
The Origin of Universal Scaling Laws in Biology <i>Geoffrey B. West, James H. Brown, and Brian J. Enquist</i>	87
Scaling and Invariants in Cardiovascular Biology <i>John K.-J. Li</i>	113
Vascular System of the Human Heart: Some Branching and Scaling Issues <i>Mair Zamir</i>	129
Constrained Constructive Optimization of Arterial Tree Models <i>Wolfgang Schreiner, Rudolf Karch, Friederike Neumann, and Martin Neumann</i>	145
Quarter-Power Allometric Scaling in Vascular Plants: Functional Basis and Ecological Consequences <i>Brian J. Enquist, Geoffrey B. West, and James H. Brown</i>	167

Twigs, Trees, and the Dynamics of Carbon in the Landscape <i>Henry S. Horn</i>	199
Cell Size, Shape, and Fitness in Evolving Populations of Bacteria <i>Richard E. Lenski and Judith A. Mongold</i>	221
Does Body Size Optimization Alter the Allometries for Production and Life History Traits? <i>Jan Kozłowski</i>	237
Why and How Phylogenetic Relationships Should be Incorporated into Studies of Scaling <i>Paul H. Harvey</i>	253
Individual Energy Use and the Allometry of Population Density <i>Helene Cyr</i>	267
Diversity and Convergence: Scaling for Conservation <i>William A. Calder</i>	297
Scaling and Self-Similarity in Species Distributions: Implications for Extinction, Species Richness, Abundance, and Range <i>John Harte</i>	325
Index	343
