Preface vii

Chapter 1. Tests of quantum electrodynamics at small distances

1. The meaning of tests of quantum electrodynamics at small distances 1

2. Tests of QED at low energies 11

3. Tests of QED at high energies; electroweak interactions; $e\mu\tau$ universality 23

Chapter 2. Electromagnetic form factors of elementary particles

1. Introductory comments 53

2. Form factors of elementary particles 55

3. Electromagnetic form factor of the π meson 62

4. Electromagnetic form factor of the K meson 72

5. Description of nucleon form factors by means of dispersion relations 75

6. Review of experimental data on nucleon form factors; theoretical interpretation 77

Chapter 3. Deep inelastic scattering of leptons by nucleons

1. Structure of the nucleon 85

2. Kinematics and cross section of deep inelastic scattering; scaling of structure functions 88

3. Relationships among structure functions in the simplest parton models; sum rules 93

4. Automodality hypothesis (scale invariance) 103

5. High-energy physics on the light cone; determination of the coefficients in Wilson's expansion near the light cone	105
6. Experimental evidence for a violation of scaling	111
7. About quantum chromodynamics	120
8. The Kuti-Weisskopf model	132
9. Models describing the scaling violation of the structure functions	137
10. Inclusive spectra in deep inelastic scattering of leptons by nucleons	144
11. Study of the structure of hadrons in deep inelastic scattering of polarized leptons by polarized nucleons	153
12. Parity breaking in deep inelastic scattering of polarized leptons	160

Chapter 4. One-photon e^+e^- annihilation

1. Introductory comments	163
2. The R_l ratio; tests of quark models; predictions of quantum chromodynamics	165
3. Some general characteristics of the final state in the reaction $e^+e^- \rightarrow$ hadrons	171
4. Evidence for the existence of gluons; the spin of gluons	181
5. Determination of the strong-interaction constant α_s	189
6. The J/ψ family of particles	190
7. The new particles as bound states of heavy quarks	198
8. The Υ family of particles	202
9. Charmed particles	205

Chapter 5. The $\gamma\gamma$ interaction

1. Stages in research on the $\gamma\gamma$ interaction	211
2. Kinematics of the process $\gamma + \gamma \rightarrow X$; the equivalent-photon method	213
3. Tests of quantum electrodynamics	221
4. The $\gamma\gamma$ interaction at low energies	221
5. Multiple production of particles in $\gamma\gamma$ interactions	233
6. Production of jets in $\gamma\gamma$ interactions	237
7. Deep inelastic $e\gamma$ scattering	241
8. Gluonium: Higgs bosons; rare processes	244
Conclusion	251
References	253
Subject Index	261
