

CONTENTS

Foreword	v
Non-Minimal Higgs Sectors: The Decoupling Limit and its Phenomenological Implications H. E. Haber	1
Spontaneous Symmetry Breaking and the Higgs Mass: A Precision Test on the Lattice A. Agodi, G. Andronico, M. Consoli	17
The Electroweak Chiral Lagrangian as an Effective Field Theory of the Standard Model with a Heavy Higgs M. J. Herrero , E. R. Morales	37
Heavy Fermion Effects in Electroweak Interactions F. Feruglio	55
A General Framework with Two Higgs Doublets and Suppressed FCNC G. Cvetič	67
Electroweak Symmetry Breaking by a Vector Condensate G. Cynolter , E. Lendvai, G. Pócsik	85
Latest Developments on the BESS Model P. Chiappetta	95
Top Condensation: The Idea and its Phenomenological Viability M. Lindner	111
TeV Scale Gauge Models of the Top Quark Condensate S. F. King	125
Perturbative and Nonperturbative Study of the Electroweak Phase Transition Z. Fodor	141

Hierarchy of Effective Models in Electroweak Phase Transition A. Jakovac	159
Higgs Search at e^+e^- and $\gamma\gamma$ Colliders J. Kalinowski	171
Higgs Search at LHC† L. Poggioli	197
Present and Future Searches with e^+e^- Colliders for the Neutral MSSM Higgs Bosons — the Complete 1-Loop Analysis J. Rosiek , A. Sopczak	199
Signatures of Gluinos and Squarks at the LHC A. Bartl , W. Majerotto, W. Porod	215
The Next-to-Minimal Supersymmetric Standard Model T. Elliott, S. F. King , P. L. White	229
Constraints on Unified Mirror Fermions F. Csikor , I. Montvay	237

†Abstract only
