Contents

Chapter 1 Fundamentals

1.1 **Truth tables and applications** 1

Connectives . Truth tables . Tautology . Switching networks . Quiz . Exercises

1.2 **Sets** 21

Well-defined sets . Quantifiers . Subsets . Venn diagrams . Intersection . Union . Complement . De Morgan laws . Disjoint sets . Number of elements . Quiz . Exercises

1.3 **Functions** 44

Ordered pair . Cartesian product, relation . Equivalence relation . Incidence matrix . Function . Equality of two functions . 1-1, onto, inverse . Function composition . Category . r-sample, r-permutation, r-set . r-selection, r-combination . Quiz . Exercises

1.4 **Induction and Combinatorics** 73

Principle of Mathematical Induction . Principle of Mathematical Induction for $n \geq n_0 \neq 1$. Factorial, binomial coefficients . Number of r-samples of n-set, etc. . Finite induction . Quiz . Exercises

1.5 **Partitions** 90

Partitions . Orderedpartition . Number of orderedpartitions of n-set into r-subsets . Multinomial coefficient . Sigma and Pi notation . Multinomial formula . Quiz . Exercises . Binomial theorem

1.6 **Introduction to Probability** 111

Relative frequency . Sigma field . Probability space, measure . Sample space, event, elementary event . Tree diagram . Equi-probable space . Properties of probability measure . Conditional probability . Multiplication Theorem . Quiz . Exercises

1.7 Finite Stochastic Processes 1

Finite stochastic process . Independent events . Product space, product probability measure . Quiz . Exercises . Random variable, expectation

Chapter 2 Linear Algebra

2.1 Vectors and Matrices 1

Vector . Vector operations . Vector operations of n-tuples . Linear combination . Matrix-vector product . Product of matrices . Identity matrix . Addition and scalar multiplication of matrices . Distributive and associative laws for matrices . Diagonal matrix . Zero matrix . Transpose of a matrix . Quiz . Negative of a matrix, difference of 2 matrices . Exercises

2.2 Incidence Matrices and Applications 1

p-step connection . Quiz . Exercises . Connected relation

2.3 Powers of Incidence Matrices 1

Asymmetric relations . Theorem $[A + A^t = J_n - I_n]$ *. Composition of incidence matrices [A(gf) = A(g) . Quiz . Exercises*

2.4 Introduction to Combinatorial Matrix Theory 2

System of distinct representatives . Diagonal of a matrix . Submatrix . Frobenius-König Theorem . Quiz . Exercises

2.5 System of Distinct Representatives 2

Hall's Theorem . Stochastic matrices . Line, term rank . Ryser's Theorem . Quiz . Exercises . Permutation matrix

2.6 Introduction to Linear Equations 2

Equivalent systems . Elementary row operations, row equivalence . Hermite normal form, row rank . Construction of Hermite normal form . Quiz . Exercises . Linear independence, dependence . Rank of a set . Row rank of a matrix

2.7 Applications of the Hermite Normal Form 2

Homogeneous system . Augmented coefficient matrix . Existence of solution to Ax = b . Inverse of a matrix . Non-singular matix . Elementary matrices . Non-singularity of elementary matrices . Construction of inverse . Quiz . Exercises . Lower, upper triangular matrices . Elementary column operation, column equivalence

Chapter 3 Convexity

3.1 Introduction to Linear Programming 279

Straight line . Parametric equations . Standard inner products . Orthogonality . Hyperplane, normal . Half-spaces . Line segments . Quiz . Exercises

3.2 Geometry in R^n 300

Norm of a vector . Properties of inner product . Closed sphere of radius r with center at a . Distance between 2 vectors . Bounded, unbounded set . Unit vector . Absolute value . Length of the projection of a vector v in the direction of the unit vector u. Cauchy-Schwarz Inequality . Distance of a point from a hyperplane . Triangle Inequality . Convex set . System of (strict) linear inequalities . Slack variable . Equality form . Extreme point of a convex set . Conditions for extreme points . Quiz . Exercises

3.3 Linear Functions on Convex Polyhedra 326

Convex combination, convex polyhedron . Extreme points of equality form of system . Linear Function . Maximum and minimum values of linear function . Objective Function . Quiz . Exercises . Convex hull . Convex function . Doubly stochastic matrix as convex combination of permutation matrices

3.4 Game Theory 348

Game, matrix game . Payoff. Maximin and minimax strategies . Lower, upper values . Strictly determined game . Saddle point . Mixed strategy . Expected earnings . Random variable, expectation . Strategy, expectation . Optimum strategy . Value of a game . Method for solving a game . Quiz . Exercises . Recessive row, column

3.5 Markov Chains 372

Markov chain, state space, transition matrix, probability distribution . Initial probability distribution . Limiting matrix . Properties of limiting matrix . Primitive matrix, regular Markov chain . Existence of limiting matrix . Fixed (characteristic) vector . Uniqueness of fixed vector . Quiz . Exercises

Answers to Quizzes and Selected Exercises 397
