## LIST OF SYMBOLS

xv

1. Symmetry	1
1-1. Introduction	1
1-2. Symmetry and everyday life	4
1-3. Symmetry and chemistry	5
1-4. Historical sketch	5
2. Symmetry operations	7
2-1. Introduction	8
2-2. The algebra of operators	10
2-3. Symmetry operations	15
2-4. The algebra of symmetry operations	19
2-5. Dipole moments	20
2-6. Optical activity	23
Problems	23
3. Point groups	24
3-1. Introduction	24
3-2. Definition of a group	25
3-3. Some examples of groups	26
3-4. Point groups	31
3-5. Some properties of groups	35
3-6. Classification of point groups	35
3-7. Determination of molecular point groups	3 8
A.3-1 The Rearrangement Theorem	40
Problems	47
4. Matrices	48
4-1. Introduction	48
4-2. Definitions (matrices and determinants)	51
4-3. Matrix algebra	55
4-4. The matrix eigenvalue equation	57
4-5. Similarity transformations	58
A.4-1 Special matrices	61
A.4-2 Method for determining the inverse of a matrix	63
A.4-3 Theorems for eigenvectors	65
A.4-4 Theorems for similarity transformations	67
A.4-5 The diagonalization of a matrix or how to find the eigenvalues and eigenvectors of a matrix	69
A.4-6 Proof that $\det(AB) = \det(A)\det(B)$	70
Problems	70
5. Matrix representations	72
6-1. Introduction	73
6-2. Symmetry operations on a position vector	78
5-3 Matrix representations for $\mathcal{C}_{2h}$ and $\mathcal{C}_{3v}$	82
5-4. Matrix representations derived from base vectors	82

5-5. Function space	86
5-6. Transformation operators $O_R$	88
5-7. A satisfactory set of transformation operators $O_R$	89
5-8. A caution	91
5-9. An example of determining $O_R$ s and $D(R)$ s for the $C_{3v}$ point group using the d-orbital function space	92
5-10. Determinants as representations	97
5-11. summary	97
A.5-1. Proof that, if $T = SR$ and $D(R)$ , $D(S)$ , and $D(T)$ are found by consideration of $R$ , $S$ , $T$ on a position vector, then $D(T) = D(S)D(R)$	98
A.5-2. Proof that the matrices in eqn 5-4.2 form a representation	99
A.5-3. Proof that the matrices derived from a position vector are the same as those derived from a single set of base vectors	99
A.5-4. Proof that the operators $O_R$ are (a) linear, (b) homomorphic with $R$	100
A.5-5. Proof that the matrices derived from $O_R$ form a representation of the point group	101
Problems	101
6. Equivalent and reducible representations	
6-1. Introduction	103
6-2. Equivalent representations	103
6-3. An example of equivalent representations	106
6-4. Unitary representations	108
6-6. Reducible representations	110
A.6-1. Proof that the transformation operators $O_R$ will produce a unitary representation if orthonormal basis functions are used	113
A.6-2. The Schmidt orthogonalization process	113
A.6-3. Proof that any representation is equivalent, through a similarity transformation, to a unitary representation	115
7. Irreducible representations and character tables	
7-1. Introduction	117
7-2. The Great Orthogonality Theorem	118
7-3. Characters	120
7-4. Number of times an irreducible representation occurs in a reducible one	123
7-5. Criterion for irreducibility	124
7-6. The reduction of a reducible representation	126
7-7. Character tables and their construction	128
7-8. Notation for irreducible representations	131
7-9. An example of the determination of the irreducible representations to which certain functions belong	134
A.7-1. The Great Orthogonality Theorem	138
A.7.2. Proof that $\sum n_i^2 = g$	143
A.7.3. Proof that the number of irreducible representations $n$ equals the number of classes $k$	145
Problems	149
8. Representations and quantum mechanics	
8-1. Introduction	161
8-2. The invariance of Hamiltonian operators under $O_R$	161
8-3. Direct product representations within a group	165
8-4. Vanishing integrals	168

A.8-1.] <b>Proof of eqns 8-2.12 to 8-2.15</b>	160
<b>Problems</b>	163
<b>9. Molecular vibrations</b>	
<b>9-1. Introduction</b>	164
<b>9-2. Normal coordinates</b>	164
<b>9-3. The vibrational equation</b>	169
9-4. The $\Gamma^0$ (or $\Gamma^{3N}$ ) representation	172
<b>9-6. The reduction of <math>\Gamma^0</math></b>	175
<b>9-6. The classification of normal coordinates</b>	178
<b>9-7. Further examples of normal coordinate classification</b>	182
<b>9-8. Normal coordinates for linear molecules</b>	184
<b>9-9. Classification of the vibrational levels</b>	184
<b>9-10.] Infra-red spectra</b>	186
<b>9-11. Raman spectra</b>	189
9-12. The infra-red and Raman spectra of $\text{CH}_4$ and $\text{CH}_3\text{D}$	190
<b>9-13. Combination and overtone levels and Fermi resonance</b>	192
A.9-1.] <b>Proof of eqns 9-2.17 and 9-2.18</b>	193
A.9-2.] <b>Proof that <math>D^n(\mathbf{R}) = \mathbf{C}^{-1}D^0(\mathbf{R})\mathbf{C}</math></b>	194
A.9-3.] <b>Symmetry properties of polarizability functions</b>	195
<b>Problems</b>	196
<b>10. Molecular orbital theory</b>	
<b>10-1. Introduction</b>	197
<b>10-2. The Hartree-Fock approximation</b>	198
<b>10-3. The LCAO MO approximation</b>	201
<b>10-4. The r-electron approximation</b>	203
<b>10-5. Hückel molecular orbit method</b>	205
<b>10-6. Hückel molecular orbital method for benzene</b>	206
<b>10-7. Hückel molecular orbital method for the trivinylmethyl radical</b>	212
A.10-1. <b>Atomic units</b>	217
A.10-2. <b>An alternative notation for the LCAO MO method</b>	217
A.10-3. <b>Proof that the matrix elements of an operator <math>H</math> which commutes with all <math>\mathbf{O}_R</math> of a group vanish between functions belonging to different irreducible representations</b>	218
<b>Problems</b>	218
<b>11.] Hybrid orbitals</b>	
<b>11-1. Introduction</b>	219
<b>11-2. Transformation properties of atomic orbitals</b>	221
<b>11-3. Hybrid orbitals for u-bonding systems</b>	225
<b>11-4. Hybrid orbitals for w-bonding systems</b>	229
<b>11-6. The mathematical form of hybrid orbitals</b>	234
<b>11-6. Relationship between localized and non-localized molecular orbital theory</b>	241
<b>Problems</b>	241
<b>12. Transition metal chemistry</b>	
<b>12-1. Introduction</b>	243
<b>12-2. LCAO MOs for octahedral compounds</b>	244
<b>12-3. LCAO MOs for tetrahedral compounds</b>	251
<b>12-4. LCAO MOs for sandwich compounds</b>	252
<b>12-5. Crystal field splitting</b>	257
<b>12-6. Order of orbital energy levels in crystal field theory</b>	260

<b>12-7. Correlation diagrams</b>	<b>262</b>
<b>12-8. Spectral properties</b>	<b>271</b>
<b>12-9. Magnetic properties</b>	<b>273</b>
<b>12-10. Ligand field theory</b>	<b>276</b>
<b>A.12-1. Spectroscopic states and term symbols for many-electron atoms or ions</b>	<b>276</b>
<b>Problems</b>	<b>278</b>
<b>Appendix I : Character tables</b>	<b>279</b>
<b>BIBLIOGRAPHY</b>	<b>289</b>
<b>ANSWERS To SELECTED PROBLEMS</b>	<b>290</b>
<b>INDEX</b>	<b>297</b>
