Preface	v
Participants and Contributors	xi
Review Articles	
A. On the Interaction of Water Waves with Islands. by <i>R.E. Meyer</i>	3
B. Review of Tsunami Simulation with a Finite Difference Method. by <i>Fumihiko Imamura</i>	25
C. Review of Finite Element Methods for Tsunami Simulations. by <i>Roy Walters and Toshimitsu Takagi</i>	43
D. Numerical Prediction of Solitary Wave Runup on Vertical Walls by Finite-Amplitude Shallow-Water Wave Model. by <i>Nobuhisa Kobayashi and Yukiko Tega</i>	88
E. Fully Nonlinear Potential Flow Models used for Long Wave Runup Prediction. by <i>S. Grilli</i>	116
F. Modeling Tsunamis with Marker and Cell Methods. by <i>Peter Raad</i>	181
Contributed Discussion Papers	
A. Physical Model Test of Hokkaido Nansei-Oki Earthquake Tsunami Around Cape Aonae. by <i>Kenji Noguchi, Shinji Sato and Shigenobu Tanaka</i>	207
B. Analytic Solutions of Solitary Wave Runup on the Conical Island and on the Revere Beach. by <i>Utku Kanoglu and Costas Synolakis</i>	214
C. Application of Linear Theory to the Computation of Runup of Solitary Wave on a Conical Island. by <i>Koji Fujima</i>	221

D. Simulation of Wave-Packet Propagation Along Sloping Beach by TUNAMI-Code. <i>by Fumihiko Imamura</i>	231
E. Numerical Modeling of 3-D Long Wave Runup Using VTCS-3. <i>by Vasily Titov and Costas Synolakis</i>	242
F. Tsunami Runup on Okushiri Island. <i>by Yuichiro Tanioka and Kenji Satake</i>	249
G. Finite Element Analysis in Bench Mark Problems 2 and 3. <i>by Toshimitsu Takagi</i>	258
H. WET2: An Eulerian-Lagrangian Shallow Water FEM Model. <i>by B.C. Beck and A.M. Baptista</i>	265
I. Finite Element Solutions of the Hokkaido Nansei-Oki Benchmark. <i>by E.P. Myers and A.M. Baptista</i>	272
J. Application of a Finite Element, Wave Equation Model to the Benchmark Problems : 1 and 3. <i>by Roy Walters</i>	281
K. Numerical Modelling of Solitary Wave Propagation and Breaking on a Beach and Runup on a Vertical Wall. <i>by G. Watson, T.C.D. Barnes and D.H. Peregrine</i>	291
L. Runup of Solitary Waves on a Vertical Wall. <i>by Sigurdur Gardarsson</i>	298
M. Calculation of Runup Using a Local Polynomial Approximation Model: Discussion for Benchmark Problem 3. <i>by Andrew Kennedy</i>	306
N. Numerical Simulations of Solitary Wave Generation and Runup on a Canal Compared with Experiment. <i>by A.F. Teles de Silva, J.T. Aauje Chacaltana, and D.H. Peregrine</i>	313
O. Three-Dimensional Analysis of Long Wave Runup on a Conical Island by Using the MAC Method. <i>by Kenji Masamura and Koji Fujima</i>	321

P. Tsunami Runup in a Sloping Channel. by <i>E. Pelinovsky, O. Kozyrev and E. Troshina</i>	332
Q. Long Wave Run-up Modelling in 2D Using Finite Difference Grid With Surface Roller and Moving Boundaries. by <i>G.S. Prasetya, B. Ontowirjo and D. Subandono</i>	340
Commentary	349
Appendices — Benchmark Problems	
A. Problem 1: Wave-Packet Propagation Along a Uniformly Sloping Beach. by <i>Harry Yeh and Kuo-Tung Chang</i>	357
B. Problem 2: Runup of Solitary Waves on a Circular Island. by <i>Michael Briggs, Costas Synolakis, Gordon Harkins, and Debra Green</i>	363
C. Problem 3: Runup of Solitary Waves on a Vertical Wall. by <i>Michael Briggs, Costas Synolakis, Utku Kanoglu, and Debra Green</i>	375
D. Problem 4: The 1993 Okushiri Tsunami: Data, Conditions and Phenomena. by <i>Tomoyuki Takahashi</i>	384
