CONTENTS

Preface V

PART I.

THERMODYNAMICS, TRANSPORT THEORY AND STATISTICAL MECHANICS IN THE CONTEXT OF CONTINUUM MODELLING OF DISCRETE SYSTEMS

*GL Statistical Mechanics of Vortex Matter
G. Blatter†, *M. Dodgson, V. Geshkenbein & H. Nordborg* . . . 2

RC Continuum Modelling of Flows with Nucleation and Condensation
C. Delale 14

RC Non-commutative Geometry, Irreversibility and Log-Periodicity
A. Erzan & A. Gorbon 22

RC Evolution of Snow-Firn Properties: A Thermomechanical Approach
E. Guseva-Lozinski 29

RC Nonpolynomial Expansion Near Fixed Points
A. Hacınlıyan, N. Perdahçı & F. Fırat Acar 39

RC Endoreversible Thermodynamics: A Tool for Simulating Discrete Systems
W. Muschik 47

GL Order-Disorder and Phase Separation: Modeling Grain Sintering
A. Novick-Cohen 56

RC Thermodynamics and Wellposedness of Constitutive Differential Equations in Continuum Mechanics (Abstract)
E. Romensky 69

*GL — General Lecture, RC — Research Communication
†Names underlined — Lecturers

RC Microstructural Models for the Spin (Abstract)
C. Trimarco 71

RC The Mechanical Foundations of the Fokker-Planck Equation and its Generalizations (Abstract)
S. Sellers & E. Fried 72

PART II.

CONTINUUM MECHANICS OF COMPLEX FLUIDS AND DEFORMABLE SOLIDS WITH MICROSTRUCTURE

RC On the Determination of the Theoretical Strength Limit in Compression of Unidirectional Composite Materials
S. Akbarov & A. Cilli 74

RC The Theory of Deformable Porous Media Applied to Composite Materials Manufacturing (Abstract)
D. Ambrosi, A. Farina *& L. Preziosi* 81

RC The Mass Transport by Convection and Diffusion in a Multiporous Medium
D. Baltean, T. Lévy & S. Balint 82

RC Rheology of Suspensions; Continuous Water/AOT/Oil Microemulsions
D. Bedeaux, G. Koper & J. Smeets 91

RC Composites with Superconducting Interfaces
Y. Benveniste & T. Miloh 100

RC Equilibrium States in Volume Scattering of Acoustic Waves in a Channel (Abstract)
M. Beran & A. Whitman 109

RC Duality Transformation and a New Kind of Phase Transition in the Magnetoresistive Response of a Composite Conductor with a 2D Microstructure
D. Bergman *& Y. Strelniker* 110

RC Unstable Variational Problems in Solid Mechanics (Abstract)
A. Cherkaev 120

RC Continuum Models of Plane Elastic Cellular Media
I. Cielecka, M. Wozniak *& C. Wozniak* 121

RC Higher Order Continuum Model for Incompressible Viscous Flow and Application to the Modeling of Thermal Vibrational Convection
A. Fedoseyev & B. Alexeev 130

RC Sedimentation Phenomena and Structure in Suspensions
F. Feuillebois, L. Talini & J. Leblond *138*

RC Exact Relations for Composites: Towards a Complete Solution (Abstract)
Y. Grabovsky, G. Milton & D. Sage *146*

RC Bounds of Physical Properties of Some Random Structures Models
D. Jeulin 147

GL Some Basic Problems in Micromechanics of Solids with Pores of Various Shapes (Dry and Fluid-filled) (Abstract)
M. Kachanov 155

GL Self-Consistent Schemes in the Problem of Wave Propagation Through Inhomogeneous Media
S. Kanaun 156

RC The Elastic Wave Propagation in the Piezoelectric Fiber Reinforced Composites
V. Levin 171

GL Fluid Dynamics of Particulate Suspensions: Selected Topics
D. Lhuillier & A. Nadim 180

RC Material Mixing in Space-Time: The Problem of Bounds for Effective Parameters
K. Lurie 198

RC On a Two-point Correlation Function in Random Dispersions and an Application
K. Markov 206

RC Effects of Densely Packed Substructures on the Response of a Core Structure (Abstract)
J. McCoy 216

RC Micromechanics and Stochastic Finite Elements
M. Ostoja-Starzewski 217

RC Efficient Dielectric Constant Calculation for Periodic Composites (Abstract)
Ping Sheng & H. Ma *226*

RC Nonlinear Polycrystals with Microstructure Evolution
P. Ponte Castañeda 228

RC Transport and Diffusion in Porous Media (Abstract)
L. Schwartz 236

RC On the Status of the Beavers and Joseph Condition in the Mechanics of Porous Media
A. Soliman & A. Ghaleb 237

RC Induced Anisotropic Magneto-Resistance in a Composite Medium with a Periodic Microstructure: A New Effect in Classical Transport
Y. Strelniker & D. Bergman 247

RC Third-Order Bounds for the Effective Properties of a Nonlinear Dielectric Polycrystal
D. R. S. Talbot & J. Willis 260

RC Self-heating of Some Viscoelastic Fluids
V. Tigoiu 268

PART III
CONTINUUM THEORY OF LIVING STRUCTURES

RC Biological Polymers: Dynamics and Solitons
A. Askar 278

GL Communication and Cooperation in Complex Bacterial Colonies (Abstract)
E. Ben-Jacob 287

RC Mathematical Modeling of Soft Biological Tissues and Solitary Waves in Arteries
H. Demiray 288

RC Simulations of Polymeric Systems
B. Erman & I. Bahar 297

GL Effect of Interfacial Bonding on the Mechanical Properties of Bone Tissue
N. *Güzelsu* 304

RC The Renewal and Statistical Equilibrium of the Epidermis: Biomechanics of Tissues (Abstract)
N. Rivier & B. Dubertret 318

RC Continuum Kinematics, of Volumetric Growth
R. Segev & G. Rodnay 321

RC Micromechanical Design of Materials for Bone Implants
I. Sevostianov 329

PART IV.
DEFECT DYNAMICS, DYNAMICAL SYSTEMS, SYNERGETICS, SOLITONS, COHERENT STRUCTURES

RC Dissipation in Solids: Thermal Oscillations of Atoms
A. Akay & C. Çelik *340*

GL Thermodynamics of Chaos
*V. B*erdichevsky 348

RC A Model of Pulse Neural Networks
*B. C*avicchia, *B.* Tirozzi *D. Brown & J. Feng* *353*

RC An Asymptotic Theory of Thin Micropolar Plates
H. Erbay *358*

RC Multi-Scale Expansion of the Coupled Modified Kadomtsev–Petviashvili Equations
S. Erbay 366

GL Self-Organized Criticality in a Creep-Slip Model of Earthquake Faults
P. Hähner & Y. Drossinos 374

RC Scattering of Transverse Elastic Waves from a Thin Defect Layer
A. Kosevich & A. Tutov *388*

RC Wave Propagation in Bounded Media without Using Boundary Conditions
D. Nelson *396*

RC Solitons as Quasiparticles (Abstract)
D. Pushkarov 404

RC Waves in Piezoelectric Random Media
F. Sabina 405

RC Propagation of Nonlinear Surface SH Waves in a Layered Hyperelastic Half-Space
M. Teymur & H. Var 413

RC Bayen-Flato Mechanics and Symmetries of Dynamical Systems
G. Unal 421

PART V.
DISLOCATIONS AND PLASTICITY

RC Experimental Approach to Continuum Dislocation Fields in Polycrystalline Materials
B. Adams, S. Sun & W. Yang 428

RC Anisotropic Models of Multiplicative Finite Elastoplasticity
S. Cleja-Tigoiu 437

RC Overall Modelling of Periodic Heterogeneous Cosserat Media
S. Forest & K. Sab 445

RC Mesomechanics of PSB Ladder Structure Formation
V. Gregor & J. Kratochvil 454

RC Micromechanics of Plastic Deformation, Continuum Damage and Necking
V. Kafka 462

GL Generalized Plasticity: Theory and Application
J. Lubliner 470

RC An End Effect Model for Fibre-Reinforced Composites
I. Mihovsky 483

GL Observations of Strain Localization and Instabilities in Plastic Deformation of Metals
H. Neuhauser, A. Ziegenben, *M. Alex & C. Engelke* 491

RC Continuum Dynamic Theory of Elastoplastic Medium with Microstructure
V. Popov & E. Kröner 503

RC The Mechanics of Defective Crystals (Abstract)
S. Sellers & P. Cermelli 511

RC Statistical Characterization of Inhomogeneous Dislocation Distributions
M. Zaiser & P. Hähner 512

PART VI.

NEW DEVELOPMENTS IN CONTINUUM THEORY, NON CLASSICAL MODELS

RC The Local and Nonlocal Nonsmooth Pseudoparabolic Systems, Their Fundamental Solutions and Applications
S. Akhiev & E. Inan 522

RC Lagrange Formalism and Dissipation in Material Systems
K.-H. Anthony 530

GL The Flux-Line Lattice in Superconductors
E. Brandt 540

RC Energetics of Fine Domain Structures (Abstract)
A. De Simone 554

RC Elements of a Theory of Growth
M. Epstein & G. Maugin 555

RC Diffusion in Non-Crystalline Solids, Particularly Metallic Glasses and Quasicrystals
W. Frank, P. Scharwaechter & R. Blüher 562

RC On Optimal Systems of Subalgebras Admitted by Kárman-Howarth Equations
S. Khabirov & G. Unal 570

RC Hardening Treated as Phase Transition: A Model Based on Superconductivity
J.-L. Marques 576

RC Mesoscopic Modelling of Magnetization Process and Magnetostriction
S. Motogi 584

GL Some Microscopic Perspectives in Continuum Modelling
A. Murdoch 592

RC A Non-Conventional Gauge Approach Towards Continuum Theories of Dissipative Deformation Processes
M. Scholle 608

GL Equivalence Groups for Second Order Balance Equations
E. Şuhubi 617

RC Real-Time Behavior Control of Deformable Bodies
S. Utku & M. Süner 632

RC The Microscopic Stress Tensor for Systems with Spin-Dependent Many-Body Interactions
H. Wagner 644

RC On Mechanics of Deformable Superconductors
Shu-Ang Zhou 652

PART VII.

DISCRETE MATERIAL STRUCTURES IN ENGINEERING SCIENCE, FATIGUE AND CRACK DYNAMICS ON DIFFERENT MICROLEVELS

RC Elasticity and Fracture in Polyacrylamide Gels
L. Benguigui 662

RC Nonlinear Scattering of Waves by Cracks
D. Capuani & *J. Willis* *669*

RC Statistical Aspects and Size Effect in Toughness of Concrete (Abstract)
A. Chudnovsky, M. Issa & M. Görelik *677*

GL Towards a Unified Approach to Fracture Yielding, and Damage
G. Del Piero *679*

RC Stress Singularity Exponent at the Vertex of a Three-Dimensional Conical Notch
D. Esparza & N. Movchan *693*

RC Impact Damage Mechanisms in Laminated Composites (Abstract)
A. Filippov *701*

RC Micromechanics of Cracking in Composite Materials
Z. Hashin *702*

RC Asymptotic Crack Tip Fields for Dynamic Crack Growth in Ductile-Porous Solids
K. Herrmann & B. Potthast 710

RC Thermo-Microstretch Model of Damage Mechanics
E. Inan 719

RC Variational Formulation of the Crack Problem with a Virtual Crack Kinking
K. C. Le & H. Schütte *727*

RC Continual, Discrete and Hybrid Models in Rupture Mechanics (Abstract)
N. Morozov & M. Paukshto 736

RC On the Nature of Fractal Crack Interfaces and the Evolution of Fractality
P. Panagiotopoulos 737

RC Recent Advances in the Modeling of Failure Phenomena of Piezoelectric Ceramics
H. Sosa & N. Khutoryansky 745

GL On Micro-Macro Transition in Nonlinear Mechanics
c. Stolz 753

RC Microstructural Effects on the Fracture of Concrete
M. Tagdemir, C. Tagdemir, B. Barr & F. Lydon 767

RC On the Interaction between a Crack and Inclusions in Materials
D. Weichert & A. Haddi 775

PART VIII.
GRANULAR MATERIALS AND INTERFACIAL PHENOMENA

RC A Kinetic Model for Granular Materials (Abstract)
G. Capriz 786

RC Remarks on Equations for Fast Granular Flows
P. Giovine, G. Mullenger & F. Oliveri 787

RC Junctions between Several Thin Bodies
A. Movchan & O. Selsil 795

RC A Model for Granular Material Mechanics Combining Double-Shearing and Critical State Concepts
A. J. M. Spencer 803

PART IX.
SPECIAL POSTER SESSION (SP) (ABSTRACTS)

SP Nonlinear Wave Modulation in a Two-layered Elastic Medium
S. Ahmetolan & M. Teymur 812

SP Nonlinear Wave Modulation in a Prestressed Viscoelastic Thin Tube Filled with an Inviscid Fluid
G. Akgün & H. Demiray 815

SP Weakly Nonlinear Waves in a Prestressed Thin Elastic Tube Containing a Viscous Fluid
N. Antar & H. Demiray 817

SP Approximate Constants of Motion for the Modified Hénon-Heiles Problem
E. Atzlgan 819

SP An Investigation of Pulsatile Flow in a Slowly Tapered Tube
I. Bakirtas & H. Demiray 820

SP Analysis of Three Dimensional Non-linear Systems Using Trigonometric Transformations
F. Firat Acar *822*

SP Buckling of Composite Plates which the Material has Periodically Curved Structure
Z. Kutug *824*

SP Elasticity of a Continuum with Extra-Matter and Dislocation Defects
F. Miri, N. Rivier *& R. Khajehpour* *82*

SP The Stability of Poiseuille Flow of a Second Order Incompressible Rivlin-Ericksen Fluid
S. Ozer *& E.* Suhubi 82

SP Nonpolynomial Normal Forms in Dynamical Systems Near Equilibrium
N. Perdahci, A. Hacanlzyan & G. Firat Acar 83

SP The Stability Loss of the Strip Fabricated from the Multilayered Composite Material with Periodically Curved Structure
N. Yahnioglu & S. Selim *83*

Author Index **83**

List of Participants **84**
