

CONTENTS

Introduction to the Symposia on Few-Body Systems and Multiparticle Dynamics	ix
D. A. Micha	
PART I: BOUND STATES OF FEW-BODY SYSTEMS	
The Trinucleon Bound-State System	1
G. L. Payne	
Monte Carlo Techniques for Ground-State Properties	19
K. E. Schmidt	
Quarks and Nucleon–Nucleon Correlations	30
G. A. Miller	
Eigenfunctions and Periodic Orbits in Classically Chaotic Systems: Order in Chaos?	43
E. J. Heller, P. W. O'Connor, and J. N. Gehlen	
The Quark Model and the Nucleon–Baryon Interaction	60
A. Faessler	
PART II: COLLISION DYNAMICS OF FEW-BODY SYSTEMS	
Time Dependent Approach to Photodetachment in E, B, and Parallel E and B Fields	94
W. P. Reinhardt	
Deuteron–Nucleus Collisions: Reduction of a Many-Fermion Collision System to an Equivalent Three-Body Model	111
R. Kozack and F. S. Levin	
Coincidence Reactions and the Three-Body Structure of ${}^6\text{Li}$	131
D. R. Lehman	
Three-Body Theory of Electron Capture	145
J. H. Macek	
The Time-Dependent Hartree-Fock Method and Chaos in Nuclear Dynamics	157
M. R. Strayer	
PART III: FEW-BODY DYNAMICS IN LARGER SYSTEMS	
Microscopic Cluster Theory in Nuclear Physics	174
Y. C. Tang	
Simulations of Structure, Dynamics and Transformations in Finite Aggregates	200
U. Landman, R. N. Barnett, C. L. Cleveland, J. Luo, D. Scharf, and J. Jortner	
Reactive Flux Correlation Functions and Monte Carlo Evaluation of Real Time Path Integrals	245
W. H. Miller	
Solid and Liquid Molecules and Microclusters	261
R. S. Berry
