

CONTENTS

CLUSTER MODEL OF THE NUCLEUS

Hisashi Horiuchi and Kiyomi Ikeda

1.	INTRODUCTION	2
2.	CLUSTER STRUCTURE OF NUCLEI	5
2.1	Typical Clustering States	5
2.2	Molecule-like Structure of Nuclei and the Threshold-energy Rule	10
2.3	Microscopic Cluster Model	15
2.3.1	RGM and GCM	15
2.3.2	Cluster model space and Pauli-forbidden states	17
2.3.3	OCM	18
2.4	Characteristic Points of the Structure Study by the Microscopic Cluster Model	19
2.4.1	Identification of the well-developed molecule-like (cluster) structure	19
2.4.2	Coexistence and structure-change of the shell-model-like structure and the cluster structure	21
2.4.3	Cluster model study of light nuclei including the non-self-conjugate- $4n$ nuclei	24
2.4.4	Molecule-like structure in the high excitation energy region	26
2.5	Several Subjects Related to the Study of the Cluster Structure	28
2.5.1	Microscopic study of the inter-nucleus interaction	28
2.5.2	Study of reaction processes incorporating the viewpoint of cluster structure	32
2.5.3	Contributions to the nuclear astrophysics and to the study of the controlled nuclear fusion	34
2.5.4	Clustering correlation in medium-heavy and heavy nuclei	36
2.6	Connection with the Neighbouring Fields in Nuclear Physics	39
2.6.1	Hypernuclei	39
2.6.2	Interaction between quark-clusters	41
3.	MANY-CENTER MODEL AND ROTATIONAL STATES	43
3.1	Brink Model	43
3.1.1	Definition of the model wave function	43
3.1.2	Separation of the center-of-mass coordinate	44
3.1.3	Matrix elements of one- and two-body operators	48
3.1.4	Saturated spin-isospin configuration	52
3.2	Relation of the Brink Model Wave Function with the Shell Model Wave Function	56
3.3	Molecular Orbital Method	59
3.3.1	Average field and clustering	59
3.3.2	Method of linear combination of "atomic orbitals"	60
3.3.3	Hartree-Fock method and symmetries of the Hartree-Fock Hamiltonian	69
3.3.4	Self-consistent method of linear combination of "atomic orbitals"	74.
3.4	Projection of Parity and Angular Momentum	77
3.4.1	Peierls-Yoccoz theory of projection	77
General idea	77

Parity projection	79
Angular momentum projection	80
3.4.2 Effect of the symmetry of the intrinsic state on the projection	85
Invariance for the rotation by $2\pi/N$ around z-axis	86
Axial symmetry around z-axis	87
Invariance for the xz-plane reflection	67
Di -cluster system	89
Systems with D_{3h} symmetry	89
Brink formula	91
3.4.3 Calculation of the matrix elements by the projected wave functions	94
4. DESCRIPTION OF THE INTER-CLUSTER RELATIVE MOTION BY THE GENERATOR COORDINATE METHOD	98
4.1 Griffin-Hill-Wheeler Equation	98
4.2 GCM Kernel of Two-spinless-cluster System	102
4.2.1 General form of Hamiltonian and overlap kernels	102
4.2.2 Analytical evaluation of the GCM kernel	104
Valence orbit method	104
5. DESCRIPTION OF THE INTER-CLUSTER RELATIVE MOTION BY THE RESONATING GROUP METHOD	107
5.1 Formulation	107
5.2 Equivalence of RGM and GCM	115
5.3 Calculation of RGM Kernels by Using GCM Kernels	119
5.3.1 Coordinate representation	119
5.3.2 Harmonic oscillator representation	127
5.3.3 Gaussian representation	130
5.4 Calculation of Direct Potential	134
6. IMPOSITION OF THE SCATTERING BOUNDARY CONDITION	139
6.1 Brief Survey of the Computational Methods of the Scattering Matrix in RGM and GCM	139
6.2 Wave Functions in the Outside Region and Matrix Elements in the Interaction Region	140
6.3 R-matrix Type Method	144
6.4 Variational Method	153
7. CLUSTER MODEL SPACE — RGM NORM KERNEL AND PAULI-FORBIDDEN STATES	162
7.1 Orthonormal Basis Wave Functions of the System and the Eigenvalue Problem of the Norm Kernel	162
7.2 Explicit Solution of the Eigenvalue Problem of the RGM Norm Kernel	165
7.3 Relation between Cluster Model States with Shell Model States	172
7.4 Almost Forbidden States	176

8. ORTHOGONALITY CONDITION MODEL	178
8.1 Inner Oscillation of the Inter-cluster Relative Wave Function	178
8.2 Formulation of the OCM	181
9. A FEW EXAMPLES OF THE MICROSCOPIC CLUSTER MODEL STUDY	188
9.1 $\alpha + {}^{16}\text{O}$ Model for ${}^{20}\text{Ne}$	188
9.2 $\alpha + {}^{12}\text{C}$ Model for ${}^{16}\text{O}$	194
9.3 3α Model for ${}^{12}\text{C}$	201
ACKNOWLEDGEMENTS	205
APPENDIX I SEPARATION OF THE CENTER-OF-MASS COORDINATE IN THE CASE OF THE HARMONIC OSCILLATOR SHELL MODEL	206
APPENDIX II ANTISYMMETRIZER, LAPLACE EXPANSION OF DETERMINANT AND JACOBI FORMULA	208
II.1 Total Antisymmetrizer	208
II.2 Antisymmetrizer of Two-Cluster System	211
II.3 Laplace Expansion of Determinant	214
II.4 Jacobi Formula	216
APPENDIX III SYMMETRIES OF RGM KERNELS FOR THE SYSTEMS OF TWO IDENTICAL NUCLEI	219
APPENDIX IV TRANSFORMATION OF THE HARMONIC OSCILLATOR WAVE FUNCTIONS BETWEEN CARTESIAN REPRESENTATION AND POLAR COORDINATE REPRESENTATION	225
APPENDIX V EXPANSION OF $\Gamma(\vec{r}, \vec{R}, \gamma)$ BY THE HARMONIC OSCILLATOR WAVE FUNCTION	229
APPENDIX VI AN INTRODUCTORY EXPLANATION OF ELLIOTT'S SU_3 GROUP	231
APPENDIX VII A PROOF OF THE INTEGRATION FORMULA OF EQ. (5.3.36)	247

FEW-BODY SYSTEM IN REALISTIC INTERACTION

Yoshinori Akaishi

1. INTRODUCTION.	260
1.1 Few-Body Problems and ATMS	260
1.2 Four-Nucleon System	261
CHAPTER I. THE ATMS METHOD	
2. FORMULATION OF ATMS	266
2.1 Derivation of Multiple Scattering Equation	266
2.2 ATMS Wave Function	269
3. HARMONIC OSCILLATOR BASIS TREATMENT.	272
3.1 Harmonic Oscillator Model	272
3.2 On-Shell Correlation Function	274
3.3 Off-Shell Correlation Function	276
3.4 Procedure for ATMS Calculation	277
4. EULER-EDUATION TREATMENT	279
4.1 Euler Equation.	280
4.2 Numerical Calculation	282
5. MULTI-DIMENSIONAL NUMERICAL INTEGRATION	284
5.1 Quasi-Random Number Method	284
5.2 Transformation of Variables	289
CHAPTER II. ACCURACY OF ATMS	
6. VARIATIONAL UPPER AND LOWER BOUNDS	293
6.1 Temple's Lower Bound	294
6.2 Hall-Post's Lower Bound	294
6.3 Accuracy of Wave Function	296
7. FEW-BODY SYSTEM WITH CENTRAL POTENTIAL	297
7.1 Three α System	297
7.2 Three- and Four-Nucleon Systems	299
CHAPTER III. THREE-BODY SYSTEM IN COULOMB INTERACTION	
8. COULOMB THREE-BODY SYSTEM.	306
8.1 Hamiltonian	306
8.2 Three Kinds of ATMS Wave Functions	308
9. $(d,t\mu)$ MOLECULE	310
9.1 Two- Body System	310
9.2 Ground-State Energy of $(d,t\mu)$	311
9.3 d - t Relative Wave Function	312
10. INTERMOLECULAR POTENTIAL	316
10.1 Theoretical Derivation	316
10.2 $(t\mu)$ - d Potential	319

11. $(e^-e^+e^-)$ MOLECULE	323
11.1 Energy and Wave Function	323
11.2 H^- and H^+ Type Molecules	324

CHAPTER IV. FEW-NUCLEON SYSTEM AND REALISTIC INTERACTION

12. TREATMENT OF REALISTIC FEW-NUCLEON SYSTEM	327
12.1 Feature of Realistic NN Potential	327
12.2 Wave Function of Triton	328
12.3 Classification of Wave Function.	335
12.4 Calculation of Matrix Element	340
13. THE ALPHA PARTICLE	342
13.1 Ground-State Wave Function	343
13.2 Ground-State Energy	345
13.3 Excited-State Energies	348
13.4 Effect of Three-Body Force	350
13.5 Charge Form Factor	353
13.6 Comment on Three-Body Force	357

CHAPTER V. HIGH-MOMENTUM COMPONENTS IN ^4He

14. MOMENTUM DISTRIBUTIONS	362
14.1 Momentum Distribution of Single Nucleon	363
14.2 Momentum Distributions of Two-Nucleon Cluster	366
14.3 Parametrization of Momentum Distributions	368
15. INTERMEDIATE-ENERGY PHENOMENA	372
15.1 Inclusive Backward $p^4\text{He}$ Collision	373
15.2 (p, K^+) and (p, π^+) Reactions	376
16. SPECTRAL FUNCTION FOR THE ALPHA PARTICLE	380
16.1 Quasi-Elastic Electron Scattering.	380
16.2 Spectral Function and Short- Range Correlation	381

CONCLUDING REMARKS	386

A PRIMER IN MONTE CARLO METHODS AND LATTICE GAUGE THEORIES
SA Chin

1. INTRODUCTION.	396
2. ELEMENTS OF PROBABILITY AND STATISTICS	
2.1 Random Variable	400
2.2 Independence and Correlations	402
2.3 The Law of Large Numbers and the Central Limit Theorem	404
2.4 Markov Processes	406
2.5 Multitype Branching Processes	415
2.6 Estimation	427
3. LATTICE GAUGE THEORIES.	432
3.1 Gauge Invariance and Gauge Theory.	433
3.2 Lagrangian Lattice Gauge Theories.	435
3.3 Hamiltonian Lattice Gauge Theories.	443
3.4 Physical Observables	452
4. MONTE CARLO METHODS	463
4.1 Monte Carlo Integration.	463
4.2 Solving Lagrangian Theories	465
4.3 Solving Hamiltonian Theories	478
4.4 Further Variance Reductions	495
5. CONCLUDING REMARKS AND SOME OPEN PROBLEMS	500
APPENDIX A. GAUSSIAN GENERATORS	503
APPENDIX B. UNIT VECTOR GENERATORS	505
