

CONTENTS

Foreword

- Cage's institute on Disorder and **Mixing** ix
- List of participants xi

Prelude

- Chapter 0. Disorder and mixing
The Editors xiii

Basics

- Chapter I. Part A: Introduction to random walks
Bernard Derrida, Jean-Philippe Bouchaud and Antoine Georges 1
- Part B: The physical mechanisms of anomalous diffusion
Jean-Philippe Bouchaud and Antoine Georges 19
- Chapter II. Fractals and **multifractals** in physics
Lucilla de Arcangelis 31
- Chapter III. Hydrodynamics at low Reynolds numbers: a brief and elementary
introduction
John Hinch 43
- Chapter IV. Some chemical engineering problems related to mixing and disorder
Daniel Schweich 57
- Short contribution: 1. Chemical dissolution of a porous medium: experiments and computer
simulations
Gérard Daccord, Eric Touboul, Roland Lenormand 85

Dispersion

- Chapter V. Experimental study of tracer dispersion in model and natural porous
media
Jean-Pierre Hulin and Dominique Salin 89
- Chapter VI. Dispersion in porous media
John F. Brady and Donald L. Koch 107
- Chapter VII. Hydrodynamic dispersion in random networks
Joel Koplik 123
- Chapter VIII. Pollutant dispersion in oceans
Jacques Ganoulis 139

Short contributions:	2. Diffusive transport in laminar flows	143	
	Alain Pumir and Boris Shraiman		
	3. Diffusive transport in the Rayleigh-Benard convective flow	149	
	Francesco Sagués		C
	4. Logarithmic effects in longitudinal dispersion in porous media	151	
	Yves Pomeau and Etienne Guyon		
			C
	Suspensions		
Chapter IX.	Sedimentation of small particles		
	John Hinch	153	
Chapter X.	Filtration processes		
	John Dodds, Gerard Baluais and Dominique Leclerc	163	C
Chapter XI.	Aspects of flow and mixing behavior in fluidized beds		
	George M. Homsy	185	
	Mixing in complex situations		
Chapter XII.	Transport of polymers		
	Pierre Gilles de Gennes	203	
Chapter XIII.	Mass transfer and reaction in fixed-bed heterogeneous systems: application to sorption operations and catalytic reactors		
	Alirio E. Rodrigues	215	
Chapter XIV.	The effect of dispersion on fingering in miscible displacements		
	George M. Homsy	237	
Chapter XV.	Two phase flow through packed bed static and dynamic accessibilities of the packing		
	Pierre Marchot, Michel Crine, Jose C De La Cal, Marcel Ausloos	253	
Short contributions:	5. Mixing in agitated vessels: a random-walk approach	263	
	Paul Mavros		
	6. Elastohydrodynamic collisions and bouncing of spherical particles	265	
	Guy Barnocky		
	7. Hindered settling and hydrodynamic dispersion of sedimenting spheres	267	
	John M. Ham and George M. Homsy		
	Turbulence and reactions		
Chapter XVI.	Molecular mixing and chemical reactions in turbulent shear flows		
	James E. Broadwell	269	CC
Chapter XVII.	Theory of flames		
	Paul Clavin	293	
Short contribution:	8. Intermittency in boundary layer		
	Yves Pomeau	317	

Techniques

Chapter XVIII. Magnetic resonance imaging of liquids in porous media: a comparison to other visualization techniques
Genevieve **Guillot** 319

Chapter XIX. **Stereological** analysis of condensed materials
Jean Pierre Jernot and Christian Lantuejoul 327

Conclusion

Chapter Xx. **Lagrangian mixing**
The Editors 339

Index of key words 343
