

CONTENTS

Problem-Solving Environments: Status and Perspectives	1
<i>K. Ml Decker</i>	
1 Introduction	1
2 What are Problem-Solving Environments?	2
2.1 Definition and classification	2
2.2 User requirements	3
2.3 The problem solving procedure	4
3 The Developer's Perspective	5
3.1 Distributed heterogeneous hardware platforms	5
3.2 Client-serve architectures	6
3.3 Object-oriented technology	7
3.4 Specification languages	8
3.5 Artificial intelligence	9
3.6 Compiler technology	10
4 Examples	10
5 PSE-Related Activities at CSCS/SCSC	11
5.1 The Annal parallel application engineering environment	12
5.2 The intelligent program development environment PDE	16
5.3 Interactive scientific computing over networks	20
6 Summary and Conclusions	22
Multilevel First-Order System Least Squares Methodology	25
<i>S. McCormick</i>	
1 Introduction	25
2 First-Order System Least Squares (FOSLS)	27
3 Multilevel Projection Method (PML)	29
4 Nonlinear Illustration: Eigenproblems	31
5 Other Applications	32
5.1 Helmholtz	33
5.2 Cauchy-Riemann	34
6 Concluding Remarks	36
Parallel and Robust Multigrid with Applications	37
<i>K. Stüben</i>	
1 Introduction	37
2 HPC and Optimal Methods	38

3	Parallel Multigrid	40
3.1	Parallel multigrid on static grids	40
3.2	Example: flow over an aircraft	42
3.3	Parallel multigrid on adaptive grids	43
3.4	Example: transonic flow around an airfoil	44
4	Robust Multigrid	46
4.1	Robust multigrid based on semicoarsening	48
4.2	Algebraic multigrid	49

HPC in Industrial Simulation and Design **54**

K. Stüben

1	Introduction	54
2	The Porting Initiative Europort	56
2.1	The Europort strategy	56
2.2	Results of Europort	58
2.3	Europort as a catalyzer	58
3	Business Benefits: Europort-D	59
3.1	Forging of machine components	60
3.2	Modeling the effects of electromagnetics	61
3.3	Polymer processes	61
3.4	Turbomachinery design	62
3.5	Automotive restraint systems	62
3.6	Cartoon animator's workbench	62
3.7	Safety analysis	63
3.8	Satellite image processing	63
3.9	Airflows in and around production vehicles	64
3.10	Modeling in the pharmaceutical industry	65

On the Instruction Level Characteristics of the SPECfp92 Programs on a Vector Computer **67**

R. Espasa and M. Valero

1	Introduction	67
2	Overview of the Measurement Technique	68
3	Basic Operation Counts	69
4	Operation Frequency	71
5	Vector Length Distributions	74
5.1	Usage of the vector register capacity	75
6	Spill Code	77

7	Pressure of the Dispatch Unit	79
8	Conclusions and Future Work	82

Iterative and Direct Sparse Solvers on Parallel Computers 85

R. Asenjo, G. Bandera, G. P. Trabado, O. Plata and E. L. Zapata

1	Introduction	85
2	Sparse Matrix Algebra	86
	2.1 Sparse storage scheme	86
	2.2 Conjugate gradient algorithm	87
	2.3 LU Factorization Algorithm	88
3	Parallelization of Sparse Solvers	88
	3.1 Sparse data distributions	88
	3.2 Parallelization issues for the CG method	90
	3.3 Parallelization issues for the LU factorization	91
4	Experimental Evaluation	92
	4.1 Parallel implementations comparison for the CG method	92
	4.2 Parallel implementations comparison for the LU factorization	95
5	Conclusions	97

Numerical Integration of Stochastic Differential Equations 100

R. Mannella

1	Basic Algorithm and Relation to Fokker-Planck Equation	100
	1.1 Introduction	100
	1.2 Derivation of the algorithm	101
	1.3 Fokker-Planck equations, the Ito Stratonovich controversy and numerical simulations	105
	1.4 Improving the basic algorithm	109
2	Behavior of the Different Integration Schemes	110
	2.1 Deterministic behavior of the different integration schemes	112
	2.2 Statistical behavior of the different integration schemes	114
	2.3 Simple Euler	116
	2.4 Exact propagator	117
	2.5 Algorithm $o(h^2)$	118
	2.6 Z ₃ -less	118
	2.7 Heun scheme	118
	2.8 Full algorithm	119
3	Higher Order Stochastic Differential Equations	120
	3.1 One pole and two poles filter	120

3.2 Some alternative algorithms	121
3.3 Quasi conservative systems	124
4 Conclusions	126

Topics in Computational Physics **130**

R. Vilela-Mendes

1 Introduction	131
2 Boundary Layer Control. A Problem in Fluid Dynamics	132
2.1 The boundary layer equations	135
2.2 Scaling solutions	137
2.3 Numerical results	141
3 Stochastic Ground State Simulations	144
3.1 Quantum Monte-Carlo and the sign problem	144
3.2 Ground state processes	147
4 Handling non-Gaussian Data. Characteristic Function and Large Deviations	153
4.1 Non-Gaussian data and the neural computation of the characteristic function	153
4.2 Large deviation analysis of experimental data	161
5 A Method for Fast Track Recognition in High-Energy Colliders	171
6 Adaptive Monte Carlo Integration	174

The Dielectric Properties of a Stockmayer Fluid by ‘WEMD’ **181**

W. A. B. Evans and J. G. Powles

1 Introduction	181
2 Theory	182
3 The Model and Simulation Details	183

Nonlinear Equations in the Molecular Theory of Fluids; a Model for Molecular Fluids **195**

G. Rickayzen and M. Calleja

1 Introduction	195
2 Theory	197
2.1 Density functional	197
2.2 The direct correlation function	198
2.3 The algebraic model	200
2.4 The variational method	201
2.5 The homogeneous fluid	201
2.6 The fluid confined to a slit	202

3	Numerical and Computational Methods	203
3.1	Monte-Carlo computer simulation	203
3.2	The determination of the direct correlation function	204
3.3	A fluid in a slit	205
4	Results	205
4.1	The equation of state	205
4.2	Is there an isotropic-nematic phase transition?	207
4.3	Density profiles in the inhomogeneous fluid	209
4.4	Summary	210

Evaluation of the Dynamic Aperture of the CERN-LHC Using Fast Indicators of Long Term Stability **213**

M. Giovannozzi

1	Introduction	213
2	Dynamic Aperture: Definition and Numerical Computation	215
2.1	Method 1: direct integration	216
2.2	Method 2: integration over the dynamics	216
3	Parallel Algorithms to Evaluate the DA	217
3.1	Parallel algorithm 1: direct approach	217
3.2	Parallel algorithm 2: integration over the dynamics	218
3.3	Load balance	219
3.4	Implementations considerations	220
4	Performance of the Parallel Algorithms	220
5	Automated Early Indicators	222
5.1	Lyapunov exponent	223
5.2	Tune variation	224
5.3	Failures of the indicators: intermittency and stable chaos	225
6	Survival Plots as Early Indicators	226
6.1	Interpolation of dynamic aperture vs. number of turns and Nekhoroshev theorem	226
6.2	Long-term prediction	228
7	Dynamic Aperture Prediction	228
7.1	4D LHC	229
7.2	6D LHC	229

Issues of 'Non-Linear Dynamics in the LHC **233**

W. Scandale and R. Bartolini

1	Introduction	233
2	Non-Linear Beam Dynamic in the LHC	236

2.1	Field errors in the magnetic elements	236
2.2	Dynamical effect of the field errors	237
3	Sorting of the Random Field Errors	238
4	Analytic Techniques	239
4.1	The one-turn-map	240
4.2	The one-turn-map in normal form	240
5	Applications	243
5.1	The 8 LHC cells mode	243
5.2	The SPS for diffusion experiment	243
6	Concluding Remarks	247

Contributions

On the ψ^3 -Equation and its Generalizations	250
<i>G. L. Alfimov</i>	
Practical Parallelization Strategies of a Thermohydraulic Code	254
<i>J. M. Alvarez, M. Díaz, L. Llopis, J. L. Pastrana, F. Rus, E. Soler and J. M. Troya</i>	
New Characteristic-Finite Element Schemes for the Navier-Stokes Equations	258
<i>R. Bermejo and J. Conde</i>	
Nonlinear Wave Interactions in Media with Translation Symmetry	264
<i>A. A. Bulgakov</i>	
Instability of Steady-State Solution of Nonlinear Schrödinger Equation with Variable Parameters	268
<i>S. Darmanyán</i>	
Symmetric Split of Exponential Operators and Finite Difference Schemes	272
<i>G. Dattoli, M. Quattromini, A. Torre and P. L. Ottaviani</i>	
Numerical Study of a “Unique” Sine-Gordon “Breather” in (2+1) Dimensions	278
<i>W. A. B. Evans and L. Vázquez</i>	

Cellular Automata in the Simulation of Wave Propagation in Solids. Nonlinear Phenomena	287
<i>J. C. Faber-o, A. Bautista and L. Casasús</i>	
NF_lib: A Package for Fast Computation of 2N-Dimensional Normal Forms	292
<i>D. Frattini, A. Bazzani and G. Servizi</i>	
Symmetry Reductions of a Generalized Boussinesq Equation	298
<i>M. L. Gana'arias and M. S. Bruzon</i>	
Swing Effect Soliton Demultiplexer	302
<i>F. Garzia, C. Sibilía and M. Bertolotti</i>	
Electromagnetic Wave Interaction with a Nonlinear Photonic Lattice: Numerical Algorithms and Physical Results	306
<i>L. Gilles, S. Jiménez, S. Bulgakov and L. Vázquez</i>	
A PVM Parallel Implementation of the Nuclear Transient Analysis Code TRAC-BFI	310
<i>H. Hernández, A. Vidal, I. Blanquer, J. Roman, S. Flich, J. Muñoz-Cobo, G. Verdú, X. Sancho, A. Escrivá, J. Serra and A. Gómez</i>	
Movable Intrinsic Localized Modes	314
<i>V. Konotop and S. Takeno</i>	
A Trefftz Spectral Method for Incompressible Viscous Fluid Flows	318
<i>S. A. Lijits, S. Yu. Reutskiy and B. Tirozzi</i>	
The Multigrid Machine	322
<i>I. Martín and F. Tirado</i>	
Loop Optimization Techniques: An Overview of Software Pipelining	330
<i>R. Morenó</i>	
Parallel Simulation of Semiconductor Laser Arrays	335
<i>L. F. Romero, E. L. Zapata and J. I. Ramos</i>	

Hybrid Simulated Annealing <i>R. Salazar and R. Toral</i>	343
Solving the Eigenvalues of Symmetric Sparse Matrices Applying Parallelism <i>M. A. Trenas, R. Asenjo and E. L. Zapata</i>	347
Operator-Splitting Integrators for Gaussian Thermostated Systems <i>F. Zhang</i>	352
Posters	
Numerical Solution of a Reaction-Diffusion System <i>R. Bermejo and M. Seaid</i>	356
Symmetric Decomposition of Exponential Operators and Evolution Problems <i>G. Dattoli, L. Giannessi, M. Quattromini and A. Torre</i>	359
Object Oriented Modeling and Simulation of Dynamic Systems: Application in the Hydrologic Domain <i>M. Delhom, J. F. Santucci, F. Bisgambiglia and A. Aiello</i>	363
Integral Equations: An Application in Nuclear Physics <i>F. Folgarait, A. Fabrocini and E. Migli</i>	365
Combined Envelope-Envelope Solitons on Two Dimensional Lattices <i>R. Huss, F. G. Mertens and Yu Gaididei</i>	368
Simulation of MIMD Topologies <i>R. S. Monteiro and A. R. Borges</i>	370
Contribution of Coherent Structures in Drift-Wave Turbulence to Particle Transport <i>V. Naulin and K. H. Spatschek</i>	373

- Comparison of Trigger Waves and Waves of Transition from an Unstable State in Disordered Media 375
J. M. Noriega, M. A. Rodriguez and L. Pesquera
- Spatio-Temporal Patterns in a 3D Chaotic Neural Network 377
V. Pérez-Muñuzuri, M. A. Matías, I.P. Mariño and V. Pérez-Villar
- The Instruction Set Architecture of the Multigrid Machine 381
M. Prieto, I. Martin and F. Tirado
- Numerical Solution of Nonlinear Equations for the Classical and Semiclassical Models of Anisotropic Laser Systems 388
S. V. Sergeev, G. G. Krylov, J. M. Guerra and V. M. Pérez-García
- Instability of Waves Propagating in a Highly Birefringent Fiber 391
E. Seve, P. Tchofo-Dinda, G. Millot and M. Haeltennan
- Nonlinear Schrödinger Plane Waves 393
D. Usero and L. Vázquez
- Numerical Solution for Fokker-Planck Equations in Accelerators 397
M. P. Zorzano, H. Mais and L. Vázquez
