

CONTENTS

1 Introduction to Control Systems **1**

- 1.1 Introduction 2
- 1.2 History of automatic control 4
- 1.3 Control engineering practice 7
- 1.4 Examples of modern control systems 9
 - Exercises 18
 - Problems 19
 - Terms and concepts 24
 - References 25

2 Mathematical Models of Systems **29**

- 2.1 Introduction 30
- 2.2 Differential equations of physical systems 30
- 2.3 Linear approximations of physical systems 35
- 2.4 The **Laplace** transform 39
- 2.5 The transfer function of linear systems 46
- 2.6 Block diagram models 57
- 2.7 Signal-flow graph models 63
- 2.8 Computer analysis of control systems 69
- 2.9 Summary 72
 - Exercises 74
 - Problems 79
 - Terms and concepts 93
 - References 93

3 Feedback Control System Characteristics **97**

- 3.1 Open- and closed-loop control systems 98
- 3.2 Sensitivity of control systems to parameter variations 99
- 3.3 Control of the transient response of control systems 103
- 3.4 Disturbance signals in a feedback control system 107
- 3.5 Steady-state error 112
- 3.6 The cost of feedback 115
- 3.7 Summary 116
 - Exercises 118
 - Problems 120
 - Terms and concepts 129
 - References 130

4 The Performance of Feedback Control Systems **131**

- 4.1 Introduction 132
- 4.2 Time-domain performance specifications 133
- 4.3 The s-plane root location and the transient response 144
- 4.4 The steady-state error of feedback control systems 145
- 4.5 Performance indices 150
- 4.6 The simplification of linear systems 159
- 4.7 Summary 163
 - Exercises 164
 - Problems 167
 - Terms and concepts 175
 - References 176

5 The Stability of Linear Feedback Systems **179**

- 5.1 The concept of stability 180
- 5.2 The Routh-Hurwitz stability criterion 183
- 5.3 The relative stability of feedback control systems 191
- 5.4 The determination of root locations in the s-plane 192
- 5.5 Summary 196
 - Exercises 196
 - Problems 198
 - Terms and concepts 202
 - References 202

6 The Root Locus Method 205

6.1 Introduction 206
 6.2 The root locus concept 206
 6.3 The root locus procedure 211
 6.4 An example of a control system analysis and design utilizing the root locus method 226
 6.5 Parameter design by the root locus method 230
 6.6 Sensitivity and the root locus 237
 6.7 Summary 245
 Exercises 245
 Problems 248
 Terms and concepts 260
 References 261

7 Frequency Response Methods 263

7.1 Introduction 264
 7.2 Frequency response plots 266
 7.3 Example of drawing the Bode diagram 283
 7.4 Frequency response measurements 287
 7.5 Performance specifications in the frequency domain 290
 7.6 Log magnitude and phase diagrams 292
 7.7 Summary 295
 Exercises 295
 Problems 299
 Terms and concepts 307
 References 308

8 Stability in the Frequency Domain 309

8.1 Introduction 310
 311
 The Nyquist criterion 317
 326
 The closed-loop frequency response 333
 341
 Summary 345
 Exercises 345
 Problems 358
 Terms and concepts 371
 References 371

9 Time-Domain Analysis of Control Systems 373

- 9.1 Introduction 374
- 9.2 The state variables of a dynamic system 375
- 9.3 The state vector differential equation 378
- 9.4 Signal-flow graph state models 380
- 9.5 The stability of systems in the time domain 388
- 9.6 The time response and the transition matrix 395
- 9.7 A discrete-time evaluation of the time response 399
- 9.8 Summary 406
 - Exercises 407
 - Problems 411
 - Terms and 'concepts' 421
 - References 422

10 The Design and Compensation of Feedback Control Systems 42s

- 10.1 Introduction 426
- 10.2 Approaches to compensation 428
- 10.3 Cascade compensation networks 429
- 10.4 System compensation on the Bode diagram using the phase-lead network 435
- 10.5 Compensation on the s-plane using the phase-lead network 442
- 10.6 System compensation using integration networks 449
- 10.7 Compensation on the s-plane using a phase-lag network 453
- 10.8 Compensation on the Bode diagram using a phase-lag network 458
- 10.9 Compensation on the Bode diagram using analytical and computer methods 463
- 10.10 The design of control systems in the time domain 465
- 10.11 State-variable feedback 476
- 10.12 Summary 480
 - Exercises 482
 - Problems 485
 - Terms and concepts 494
 - References 494

11 Digital Control Systems 497

- 11.1 Introduction 498
- 11.2 Digital computer control system applications 498

11.3	Automatic assembly and robots	503
11.4	Sampled-data systems	505
11.5	Computer programs for control	510
11.6	The z-transform	511
11.7	Stability analysis in the z-plane	517
11.8	Performance of a sampled-data second-order system	518
11.9	Closed-loop systems with digital computer compensation	521
11.10	The Future Evolution of Robotics and Control Systems	524
11.11	Summary	525
	Exercises	526
	Problems	528
	Terms and concepts	530
	References	531

12 Design Case Studies 533

12.1	Engineering design	534
12.2	Control system design	535
12.3	The design of an X-Y plotter	537
12.4	The design of a space telescope control system	540
12.5	The design of a robot control system	544
12.6	The design of a mobile robot control system	547
12.7	The design of a ROV control system	549
12.8	Summary	553
	Problems	554
	Terms and concepts	560
	References	560

Appendix A 565

La place transform pairs	565
--------------------------	-----

Appendix B 567

Table B. 1 Symbols and units	567
Table B.2 Conversion factors	568

Appendix C 569

A1 introduction to matrix algebra	569
-----------------------------------	-----

Appendix D **579**

Decibel conversion 579

Answers to Selected Problems **583**

Glossary **591**

Index **599**
