EDITORS' PREFACE	vii
LIST OF ATTENDEES	x
PART 1 - PHYSICS AND THERMODYNAMICS	
"Fokker-Planck Description of Classical Systems" C. P. Enz	1
"Effective Liouville Operator and Second Law of Thermodynamics" E. Kröner	15
"Effective Medium Theories of Heterogeneous Materials from a Modern Perspective" J. E. Gubernatis	25
"Irreversible Thermodynamics of Continua and Internal Variables" J. Kestin and J. Bataille	39
"Direct Continuum Model of Interacting Particles" H. Zorski	69
"Scattering by a Random Distribution of Inclusions and Effective Elastic Properties" S. K. Datta	111
"Continuum Models of Structured Media" D. Rogula	129
PART 2 - COMPOSITES	
"Mixture Theories with Microstructure for Wave Propagation and Diffusion in Composite Materials" G.A. Hegemier	145
"Variational Principles and Bounds for the Properties of Composites" J. R. Willis	185
"Effective Properties of Materials with Planar Inclusions" M. J. Beran	217
"Field Properties and Microstructural Parameters of Two Phase Materials" B. Ondracek and B. Schulz	223
"Some Aspects of Electromechanics Microstructural Models of Bounded and Unbounded Media" Cz. Rymarz	239

Contents

<p>"New Results on Continuum Modeling of Composites" G. Herrmann, T. J. Delph and R. K. Kaul</p>	249
<p>"Macroscopic Properties of Elastic Composites: A Dynamic Approach" M. Ben-Amoz</p>	265
<p>"Magneto-Elastic Stability of Some Composite Structures" J. B. Alblas</p>	283
<p>"Interaction of Cracks and Self-Stresses in a Composite Structure" K. Herrmann</p>	313
<p>"Continuum Modeling of Three-Dimensional Rod-Like Discrete Structures" A. H. Nayfeh and M. S. Hefzy</p>	339
PART 3 - FRACTURE, FATIGUE AND STATISTICAL APPROACHES	
<p>"The Mechanics Aspects of Ductile Fracture" G. C. Sih</p>	361
<p>"Model Studies for Ductile Fracture" S. Nemat-Nasser and M. Taya</p>	387
<p>"Probabilistic Descriptions of Micro-structural Fatigue Failure" J. W. Provan and H. Ghonem</p>	407
<p>"Spectral Density of Yield Limit for Structural Steel" J. Murzewski</p>	431
<p>"Some Aspects of the Random Deformation Theory of Discrete Systems" S. Basu</p>	447
PART 4 - VOIDS, DISLOCATIONS, LATTICE THEORY AND WOVEN MATERIALS	
<p>'Continuum Representation of the Evolving Micro-structure Prevailing During the Irradiation of Crystalline Materials" R. Bullough and M. R. Hayns</p>	469
<p>"Eigenstrains in Lattice Theory" T. Mura</p>	503

Contents

"Theory of Elastic Constants in Lattices with Additional Degrees of Freedom" W.E.W. Ludwig	521
"Nonlocal Theory of Dislocations" A. Golebiewska-Lasota	537
"Bending Flexibility of Non-Woven Materials" A. S. Argon and S. M. Lee	549
 PART 5 - FLUIDS AND POLYMERS	
"Transport and Relaxation in Polyatomic and Chemically Reacting Fluids" J. S. Dahler	577
"Advances in the Rheology of Particulate Dispersions" J. D. Goddard	605
"The Sources of Non-Linear Relaxation Behavior in Statistical Theories of Mechanical Systems" A. Ziabicki	635
"The Physical Significance of Non-Convergent Integrals in Expressions for Bulk Quantities" D. J. Jeffrey	653
 PART 6 - HIGHER-ORDER CONTINUUM THEORIES	
"Generalized Functions as a Basis for Continuum Moment Stress Theories" E. W. Hart	677
"Micropolar Media and Their Relation to Discrete Systems" O. Brulin	693
"Special Micromodels for Micropolar Continua" K. Berglund	703
"On the Mechanics of Interpenetrating Solid Mechanics" H. F. Tiersten	719
"Extremum Principles for Micropolar Fluids" A. Avudainayagam	739
 AUTHOR INDEX	 755
