CONTENTS

1 SET THEORY, Page 1.

1. Sets and Functions, 1.
   1.1. Basic definitions, 1.
   1.2. Operations on sets, 2.
   1.3. Functions and mappings. Images and preimages, 4.
   1.4. Decomposition of a set into classes. Equivalence relations, 6.
2. Equivalence of Sets. The Power of a Set, 9
   2.1. Finite and infinite sets, 9.
   2.2. Countable sets, 10.
   2.3. Equivalence of sets, 13.
   2.4. Uncountability of the real numbers, 14.
   2.5. The power of a set, 16.
   2.6. The Cantor-Bernstein theorem, 17.
3. Ordered Sets and Ordinal Numbers, 20.
   3.1. Partially ordered sets, 20.
   3.2. Order-preserving mappings. Isomorphisms, 21.
   3.3. Ordered sets. Order types, 21.
   3.4. Ordered sums and products of ordered sets, 22.
   3.5. Well-ordered sets. Ordinal numbers, 23.
   3.6. Comparison of ordinal numbers, 25.
   3.7. The well-ordering theorem, the axiom of choice and equivalent assertions, 27.
   3.8. Transfinite induction, 28.
   3.9. Historical remarks, 29.
4. Systems of Sets, 31.
   4.1. Rings of sets, 31.
   4.2. Semirings of sets, 32.
   4.3. The ring generated by a semiring, 34.
   4.4. Borel algebras, 35.

2 METRIC SPACES, Page 37.

5. Basic Concepts, 37.
   5.1. Definitions and examples, 37.
   5.2. Continuous mappings and homeomorphisms. Isometric spaces, 44.

6. Convergence. Open and Closed Sets, 45.
6.1. Closure of a set. Limit points, 45.
6.2. Convergence and limits, 47.
6.3. Dense subsets. Separable spaces, 48.
6.4. Closed sets, 49.
6.5. Open sets, 50.
6.6. Open and closed sets on the real line, 51.
7. Complete Metric Spaces, 56.
7.1. Definitions and examples, 56.
7.2. The nested sphere theorem, 59.
7.3. Baire's theorem, 61.
7.4. Completion of a metric space, 62.
8. Contraction Mappings, 66.
8.1. Definition of a contraction mapping. The fixed point theorem, 66.
8.2. Contraction mappings and differential equations, 71.
8.3. Contraction mappings and integral equations, 74.

3 TOPOLOGICAL SPACES, Page 78.

9. Basic Concepts, 78.
9.1. Definitions and examples, 78.
9.2. Comparison of topologies, 80.
9.3. Bases. Axioms of countability, 80.
9.4. Convergent sequences in a topological space, 84.
9.5. Axioms of separation, 85.
9.6. Continuous mappings. Homeomorphisms, 87.
9.7. Various ways of specifying topologies. Metrizability, 89.
10. Compactness, 92.
10.1. Compact topological spaces, 92.
10.2. Continuous mappings of compact spaces, 94.
10.3. Countable compactness, 94.
10.4. Relatively compact subsets, 96.
11. Compactness in Metric Spaces, 97.
11.1. Total boundedness, 97.
11.2. Compactness and total boundedness, 99.
11.3. Relatively compact subsets of a metric space, 101.
11.4. Arzela's theorem, 101.
11.5. Peano's theorem, 104.
12. Real Functions on Metric and Topological Spaces, 108.
12.1. Continuous and uniformly continuous functions and functionals, 108.

12.2. Continuous and semicontinuous functions on compact spaces, 109.
12.3. Continuous curves in metric spaces, 112.

4 LINEAR SPACES, Page 118.

13. Basic Concepts, 118.
13.1. Definitions and examples, 118.
13.2. Linear dependence, 120.
13.3. Subspaces, 121.
13.4. Factor spaces, 122.
13.5. Linear functionals, 123.
13.6. The null space of a functional. Hyperplanes, 125
14. Convex Sets and Functionals. The Hahn-Banach Theorem, 128.
14.1. Convex sets and bodies, 128.
14.2. Convex functionals, 130.
14.3. The Minkowski functional, 131.
14.4. The Hahn-Banach theorem, 132.
14.5. Separation of convex sets in a linear space, 135.
15. Normed Linear Spaces, 137.
15.1. Definitions and examples, 137.
15.2. Subspaces of a normed linear space, 140.
16. Euclidean Spaces, 142.
16.1. Scalar products. Orthogonality and bases, 142.
16.2. Examples, 144.
16.3. Existence of an orthogonal basis. Orthogonalization, 146.
16.4. Bessel's inequality. Closed orthogonal systems, 149.
16.5. Complete Euclidean spaces. The R&z-Fischer theorem, 153.
16.6. Hilbert space. The isomorphism theorem, 154.
16.7. Subspaces. Orthogonal complements and direct sums, 156.
16.8. Characterization of Euclidean spaces, 160.
16.9. Complex Euclidean spaces, 163.
17. Topological Linear Spaces, 167.
17.1. Definitions and examples, 167.
17.2. Historical remarks, 169.

5 LINEAR FUNCTIONALS, Page 175.

18. Continuous Linear Functionals, 175.
18.1. Continuous linear functionals on a topological linear space, 175.

18.2. Continuous linear functionals on a normed linear space, 177.
18.3. The Hahn-Banach theorem for a normed linear space, 180.
19. The Conjugate Space, 183.
19.1. Definition of the conjugate space, 183.
19.2. The conjugate space of a normed linear space, 184.
19.3. The strong topology in the conjugate space, 189.
19.4. The second conjugate space, 190.
20. The Weak Topology and Weak Convergence, 195.
20.1. The weak topology in a topological linear space, 195.
20.2. Weak convergence, 195.
20.3. The weak topology and weak convergence in a conjugate space, 200.
20.4. The weak* topology, 201.
21. Generalized Functions, 206.
21.1. Preliminary remarks, 206.
21.2. The test space and test functions. Generalized functions, 207.
21.3. Operations on generalized functions, 209.
21.4. Differential equations and generalized functions, 211.
21.5. Further developments, 214.

6 LINEAR OPERATORS, Page 221.

22. Basic Concepts, 221.
22.1. Definitions and examples, 221.
22.2. Continuity and boundedness, 223.
22.3. Sums and products of operators, 225.
23. Inverse and Adjoint Operators, 228.
23.1. The inverse operator. Invertibility, 228.
23.2. The adjoint operator, 232.
23.3. The adjoint operator in Hilbert space. Self-adjoint operators, 234.
23.4. The spectrum of an operator. The resolvent, 235.
24. Completely Continuous Operators, 239.
24.1. Definitions and examples, 239.
24.2. Basic properties of completely continuous operators, 243.
24.3. Completely continuous operators in Hilbert space, 246.

7 MEASURE, Page 254.

25. Measure in the Plane, 254.
    25.1. Measure of elementary sets, 254.
    25.2. Lebesgue measure of plane sets, 258.
26. General Measure Theory, 269.
    26.1. Measure on a semiring, 269.
    26.2. Countably additive measures, 272.
27. Extensions of Measures, 275.

8 INTEGRATION, Page 284.

28. Measurable Functions, 284.
    28.1. Basic properties of measurable functions, 284.
    28.2. Simple functions. Algebraic operations on measurable functions, 286.
    28.3. Equivalent functions, 288.
    28.4. Convergence almost everywhere, 289.
    28.5. Egorov's theorem, 290.
29. The Lebesgue Integral, 293.
    29.1. Definition and basic properties of the Lebesgue integral, 294.
    29.2. Some key theorems, 298.
30. Further Properties of the Lebesgue Integral, 303.
    30.1. Passage to the limit in Lebesgue integrals, 303.
    30.2. The Lebesgue integral over a set of infinite measure, 308.
    30.3. The Lebesgue integral vs. the Riemann integral, 309.

9 DIFFERENTIATION, Page 313.

31. Differentiation of the Indefinite Lebesgue Integral, 314.
    31.1. Basic properties of monotonic functions, 314.
    31.2. Differentiation of a monotonic function, 318.
    31.3. Differentiation of an integral with respect to its upper limit, 323.
32. Functions of Bounded Variation, 328.
33. Reconstruction of a Function from Its Derivative, 333.
    33.1. Statement of the problem, 333.
    33.2. Absolutely continuous functions, 336.
    33.3. The Lebesgue decomposition, 341.
34. The Lebesgue Integral as a Set Function, 343.
    34.1. Charges. The Hahn and Jordan decompositions, 343.

34.2. Classification of charges. The Radon-Nikodym theorem, 346.

10 MORE ON INTEGRATION, Page 352.

35. Product Measures. Fubini's Theorem, 352.
35.1. Direct products of sets and measures, 352.
35.2. Evaluation of a product measure, 356.
35.3. Fubini's theorem, 359.
36. The Stieltjes Integral, 362.
36.1. Stieltjes measures, 362.
36.2. The Lebesgue-Stieltjes integral, 364.
36.3. Applications to probability theory, 365.
36.4. The Riemann-Stieltjes integral, 367.
36.5. Helly's theorems, 370.
36.6. The Riesz representation theorem, 374.
37. The Spaces L_1 and L_2, 378.
37.1. Definition and basic properties of L_1, 378.
37.2. Definition and basic properties of L_2, 383.
