

# CONTENTS

## VOLUME ONE

<b>1</b>	<b>Vectors in Classical Physics</b>	
	Introduction . . . . .	1
<b>1.1</b>	Geometric and Algebraic Definitions of a Vector . . . . .	<b>1</b>
<b>1.2</b>	The Resolution of a Vector into Components . . . . .	<b>3</b>
1.3	The Scalar Product . . . . .	4
1.4	Rotation of the Coordinate System: Orthogonal Transformations . . . . .	5
<b>1.5</b>	The Vector Product . . . . .	<b>14</b>
<b>1.6</b>	A Vector Treatment of Classical Orbit Theory . . . . .	<b>17</b>
<b>1.7</b>	Differential Operations on Scalar and Vector Fields . . . . .	<b>19</b>
<b>1.8</b>	Cartesian-Tensors . . . . .	<b>33</b>
<b>2</b>	<b>Calculus of Variations</b>	
	Introduction . . . . .	43
<b>2.1</b>	Some Famous Problems . . . . .	<b>43</b>
2.2	The Euler-Lagrange Equation . . . . .	45
2.3	Some Famous Solutions . . . . .	49
2.4	Isoperimetric Problems — Constraints . . . . .	53
2.5	Application to Classical Mechanics . . . . .	61
2.6	Extremization of Multiple Integrals . . . . .	65
<b>*2.7</b>	Invariance Principles and Noether's Theorem . . . . .	<b>72</b>
<b>3</b>	<b>Vectors and Matrices</b>	
	Introduction . . . . .	85
3.1	Groups, Fields, and Vector Spaces . . . . .	85
3.2	Linear Independence . . . . .	89
3.3	Bases and Dimensionality . . . . .	92
3.4	Isomorphisms . . . . .	95
3.5	Linear Transformations. . . . .	98
3.6	The Inverse of a Linear Transformation . . . . .	100
3.7	Matrices . . . . .	<b>102</b>
3.8	Determinants. . . . .	<b>109</b>
3.9	Similarity Transformations . . . . .	117

<b>3.10</b>	Eigenvalues and Eigenvectors . . . . .	120
<b>*3.11</b>	The Kronecker Product. . . . .	130

**4 Vector Spaces in Physics**

	Introduction . . . . .	142
<b>4.1</b>	The Inner Product . . . . .	142
4.2	Orthogonality and Completeness . . . . .	145
4.3	Complete Orthonormal Sets . . . . .	148
4.4	Self-Adjoint (Hermitian and Symmetric) Transformations . . . . .	151
4.5	Isometries-Unitary and Orthogonal Transformations . . . . .	156
4.6	The Eigenvalues and Eigenvectors of Self-Adjoint and Isometric Transformations . . . . .	<b>158</b>
4.7	Diagonalization . . . . .	164
4.8	On the Solvability of Linear Equations . . . . .	171
4.9	Minimum Principles. . . . .	175
4.10	Normal Modes . . . . .	184
4.11	Perturbation Theory-Nondegenerate Case . . . . .	192
<b>*4.12</b>	Perturbation Theory-Degenerate Case . . . . .	198

**5 Hilbert Space-Complete Orthonormal Sets of Functions**

	Introduction . . . . .	212
5.1	Function Space and Hilbert Space . . . . .	213
5.2	Complete Orthonormal Sets of Functions . . . . .	217
5.3	The Dirac $\delta$ -Function . . . . .	224
5.4	Weierstrass's Theorem: Approximation by Polynomials . . . . .	228
5.5	Legendre Polynomials . . . . .	233
5.6	Fourier Series . . . . .	239
5.7	Fourier Integrals. . . . .	246
5.8	Spherical Harmonics and Associated Legendre Functions . . . . .	253
5.9	Hermitel Polynomials . . . . .	261
5.10	Sturm-Liouville Systems-Orthogonal Polynomials . . . . .	263
5.11	A Mathematical Formulation of Quantum Mechanics . . . . .	277

**VOLUME TWO**

**6 Elements and Applications of the Theory of Analytic Functions**

	Introduction . . . . .	305
6.1	Analytic Functions-The Cauchy-Riemann Conditions . . . . .	306
6.2	Some Basic Analytic Functions . . . . .	312
6.3	Complex Integration-The Cauchy-Goursat Theorem . . . . .	322
6.4	Consequences of Cauchy's Theorem . . . . .	330
6.5	Hilbert Transforms and the Cauchy Principal Value . . . . .	335
6.6	An Introduction to Dispersion Relations . . . . .	340
6.7	The Expansion of an Analytic Function in a Power Series . . . . .	349
6.8	Residue Theory-Evaluation of Real Definite Integrals and Summation of Series . . . . .	358
6.9	Applications to Special Functions and Integral Representations . . . . .	371

<b>7</b>	<b>Green's Functions</b>	
	Introduction . . . . .	388
7.1	A New Way to Solve Differential Equations	388
7.2	Green's Functions and Delta Functions	395
7.3	Green's Functions in One Dimension	
7.4	Green's Functions in Three Dimensions	411
7.5	Radial Green's Functions . . . . .	420
7.6	An Application to the Theory of Diffraction	433
7.7	Time-dependent Green's Functions: First Order	442
7.8	The Wave Equation . . . . .	
<b>8</b>	<b>Introduction to Integral Equations</b>	
	Introduction . . . . .	469
8.1	Iterative Techniques-Linear Integral Operators . . . . .	469
8.2	Norms of Operators	474
8.3	Iterative Techniques in a Banach Space	479
8.4	Iterative Techniques for Nonlinear Equations	484
8.5	Separable Kernels . . . . .	496
8.6	General Kernels of Finite Rank . . . . .	
8.7	Completely Continuous Operators . . . . .	503
<b>9</b>	<b>Integral Equations in Hilbert Space</b>	
	Introduction . . . . .	518
9.1	Completely Continuous Hermitian Operators	531
9.2	Linear Equations and Perturbation Theory	
9.3	Finite-Rank Techniques for Eigenvalue Problems . . . . .	541
9.4	The Fredholm Alternative For Completely Continuous Operators . . . . .	549
9.5	The Numerical Solution of Linear Equations . . . . .	555
9.6	Unitary Transformations . . . . .	563
<b>10</b>	<b>Introduction to Group Theory</b>	
	Introduction . . . . .	580
10.1	An Inductive Approach	586
10.2	The Symmetric Groups . . . . .	592
10.3	Cosets, Classes, and Invariant Subgroups	
10.4	Symmetry and Group Representations . . . . .	599
10.5	Irreducible Representations . . . . .	604
10.6	Unitary Representations, Schur's Lemmas, and Orthogonality Relations . . . . .	610
10.7	The Determination of Group Representations	622
10.8	Group Theory in Physical Problems . . . . .	
	<b>General Bibliography</b> . . . . .	641
	<b>Index to Volume One</b> . . . . .	651
	<b>Index to Volume Two</b> . . . . .	65'
