<i>Preface</i>	ix
<i>Acknowledgments</i>	xiii
Chapter 1 THE OCEANS	1
1.1 Geography	1
1.2 Ocean Properties	3
1.3 Climate and the Oceans	8
1.4 Socio-Economic Importance of the Oceans	11
Chapter 2 BASIC EQUATIONS	14
2.1 Spherical Earth and the β - Plane	14
2.2 Continuity (or Conservation of Mass) Equation	16
2.3 Lagrangian Derivatives and Eulerian Derivatives	19
2.4 Momentum Equation	21
2.5 Heat and Salt Transport Equations	25
2.6 Constitutive Relations	26
2.7 Turbulence	28
2.8 Approximations and Simplifications of the Equations of Motion	29
2.9 Fluid Statics	34
Chapter 3 BOUNDARY CONDITIONS AT THE AIR-SEA INTERFACE	41
3.1 Solar Radiation	41
3.2 Air-Sea Heat Balance	43
3.3 Salinity Balance	48
3.4 Momentum Balance	50
Chapter 4 GEOSTROPHIC FLOW	55
4.1 Geostrophic Balance	55
4.2 Thermal Wind Equations	57
4.3 Sverdrup's Relation	58
4.4 Barotropic Flow	59
Chapter 5 PLANETARY BOUNDARY LAYERS	65
5.1 Basic Boundary Layer Equations	65
5.2 Atmospheric Boundary Layer	67
5.3 Ocean Surface Boundary Layer	70

5.4 Ocean Bottom Boundary Layer	72
5.5 Matching Atmospheric and Ocean Boundary Layers	72
5.6 Ekman Transport	75
5.7 Wind-Mixed Layer and the Thermocline	76
5.8 Seasonal Variations of the Thermocline	80
Chapter 6 BAROTROPIC OCEAN CIRCULATION	84
6.1 Ekman Pumping	84
6.2 A Flat Bottomed Ocean Basin with a Simple Zonal Wind Stress	89
6.3 Western Boundary Current	94
6.4 Vertical Flow Structure of the Flat-Bottomed Basin	102
Chapter 7 BAROCLINIC OCEANIC FLOWS	109
7.1 Pressure Gradients	109
7.2 Density, Salinity, Temperature Relations	111
7.3 Geostrophic Velocities from Temperature and Salinity Fields	118
7.4 Geostrophic Structures	125
Chapter 8' GENERAL CIRCULATION OF A BAROCLINIC OCEAN WITH BOTTOM TOPOGRAPHY	136
8.1 Governing Equations for Arbitrary Wind Stress, Density and Bottom Topography	136
8.2 Flat Bottomed Ocean	140
8.3 Variable Bottom Topography	142
8.4 Primitive Equation, Numerical Ocean Models	144
Chapter 9 SURFACE GRAVITY WAVES	147
9.1 Ocean Surface Waves	147
9.2 Wind Driven Waves	160
9.3 Shallow Water Flow Directly Approximated from the Equations of Motion	161
9.4 Realistic Basins and Tides	173
Chapter 10 INERTIAL MOTIONS	179
10.1 Non-Wavelike, Oscillatory Motion	179
10.2 Unsteady, Ocean Surface Boundary Layers	180
10.3 Poincare Waves	183
10.4 Kelvin Waves	187
10.5 Geostrophic Adjustment	193

Chapter 11	ASTRONOMICAL TIDES	196
11.1	Combined Gravitational and Centrifugal Force Potential	196
11.2	Equilibrium Tide	200
11.3	Tidal Observations and Analyses	206
Chapter 12	VORTICITY	213
12.1	Vorticity, a Definition	213
12.2	Vector Conventions, Identities and Theorems	214
12.3	Velocity Obtained from Vorticity	216
12.4	Vorticity Transport for a Frictionless Fluid	219
12.5	Approximations	220
Appendices		227
Appendix A:	Alternate Derivation of the Lagrangian-Eulerian Relation	227
Appendix B:	Derivation of the Absolute Acceleration in a Rotating Coordinate System	229
Appendix C:	Perturbation Analysis of the Surface Wave Equations	234
Appendix D:	The Method of Matched Asymptotic Expansions Applied to a Barotropic Ocean	238
Appendix E:	Dimensions, Conversion Factors, and Property Values	244
