| <b>1 THERMODYNAMIC CONSIDERATIONS</b>      | <b><i>1</i></b> |      |
| 1.1 The Ideal Otto Cycle                   | 1               |      |
| 1.2 Efficiencies                           | 5               |      |
| 1.2.1 Air Cycle Efficiency                 | 5               |      |
| 1.2.2 Real Gas Efficiency                  | 6               |      |
| 1.2.3 Indicated Efficiency                 | 6               |      |
| 1.3 A More Realistic Cycle                 | 7               |      |
| 1.3.1 Time Loss                            | 8               |      |
| 1.3.2 Heat Loss                            | 9               |      |
| 1.3.3 Exhaust Blowdown Loss                | 9               |      |
| 1.3.4 Other Losses                         | 9               |      |
| 1.4 Knocking                               | 12              |      |
| 1.5 Mean Effective Pressures               | 15              |      |
| 1.5.1 A Word on Units                      | 15              |      |
| 1.5.2 Brake Mean Effective Pressure        | 16              |      |
| 1.5.3 Indicated Mean Effective Pressure    | 17              |      |
| 1.6 Piston Speed                           | 17              |      |
| 1.7 Specific Power                         | 18              |      |
| 1.8 Stroke/Bore Ratio                      | 19              |      |
| 1.9 Power Equation                         | 24              |      |
| 1.10 Influence on Design                   | 26              |      |
| 1.11 Bmep Again                            | 27              |      |
| 1.12 Some More Thermodynamics              | 29              |      |
| 1.12.1 Turbulence and Flow in the Cylinder | 29              |      |
| 1.12.2 Heat Transfer                       | 30              |      |
| 1.12.3 Chemical Reaction                   | 30              |      |
| 1.12.4 STANJAN, ESPJAN and ESP             | 31              |      |
| 1.12.5 Heating Values and Enthalpy         | 31              |      |
| 1.13 Problems                              | 31              |      |

|   |                  |
|---|------------------|
| <b>2 BREATHING EXERCISES</b>                  | <hr/> <b>33</b>  |
| 2.1 Introduction                              | 33               |
| 2.2 Flow Through the Inlet Valve              | 33               |
| 2.3 The Discharge Coefficient                 | 35               |
| 2.4 The Flow Coefficient                      | 37               |
| 2.5 The Mach Index and Volumetric Efficiency  | 38               |
| 2.6 Partial Throttle                          | 41               |
| 2.7 The XK Engine                             | 42               |
| 2.8 Combustion Chamber Shape                  | 44               |
| 2.9 Valve Actuation                           | 48               |
| 2.10 Valve Timing                             | 54               |
| 2.11 Variable Valve Timing                    | 59               |
| 2.12 Manifold Tuning                          | 66               |
| 2.12.1 Introduction                           | 66               |
| 2.12.2 Helmholtz Resonators                   | 66               |
| 2.12.3 Organ Pipes                            | 70               |
| 2.12.4 What Does ESP Do?                      | 76               |
| 2.12.5 The Exhaust System                     | 77               |
| 2.13 Folding the Manifold                     | 78               |
| 2.14 Supercharging/Turbocharging              | 80               |
| 2.14.1 Introduction                           | 80               |
| 2.14.2 Characteristics of Super/Turbochargers | 82               |
| 2.14.3 Thermodynamic Considerations           | 85               |
| 2.14.4 Turbines                               | 87               |
| 2.14.5 Knock                                  | 87               |
| 2.15 Intercoolers                             | 89               |
| 2.16 Problems                                 | 92               |
| <b>3 ENGINE COOLING</b>                       | <hr/> <b>95</b>  |
| 3.1 Introduction                              | 95               |
| 3.2 Valve Seat Recession                      | 97               |
| 3.3 Heat Transfer in the Cylinder             | 100              |
| 3.3.1 Conduction in the Solid                 | 100              |
| 3.3.2 Heat Transfer in the Gas                | 101              |
| 3.3.3 Variation of Part Temperature           | 103              |
| 3.3.4 Turbulent Velocities                    | 104              |
| 3.3.5 Conclusions Regarding Temperatures      | 106              |
| 3.4 Overall Heat Transfer                     | 106              |
| 3.5 The Exhaust Valve                         | 111              |
| 3.6 Ceramic Coatings                          | 114              |
| 3.7 Problems                                  | 116              |
| <b>4 ENGINE FRICTION LOSSES</b>               | <hr/> <b>118</b> |
| 4.1 Lubrication                               | 118              |
| 4.2 Total Engine Friction                     | 119              |

|          |   |            |
|----------|---|------------|
| 4.3      | Attribution of Friction Losses                                    | 122        |
| 4.4      | Hydrodynamic Lubrication  | 125        |
| 4.5      | Mechanical Efficiency   | 127        |
| 4.6      | Inertial Loading  | 129        |
| 4.7      | The Piston Ring   | 130        |
