

# Contents

Preface.....	<b>xvii</b>
Author's Notes .....	<b>xxi</b>

## *Chapter 1*

### Introduction

1. Fluid Mechanics .....	1
2. Units of Measurement. ....	2
3. Solids, Liquids, and Gases .....	3
4. Continuum Hypothesis .....	4
5. Transport Phenomena.. .....	5
6. Surface Tension .....	8
7. Fluid Statics .....	9
8. Classical Thermodynamics .....	12
9. Perfect Gas .....	16
10. Static Equilibrium of a Compressible Medium. ....	18
Exercises .....	22
Literature Cited .....	23
Supplemental Reading. ....	23

**Chapter 2****Cartesian Tensors**

1. Scalars and Vectors .....	24
2. Rotation of Axes: Formal Definition of a Vector .....	25
3. Multiplication of Matrices .....	28
4. <b>Second Order Tensor</b> .....	29
5. Contraction and Multiplication .....	31
6. Force on a Surface .....	32
7. Kronecker Delta and Alternating Tensor .....	35
8. Dot Product .....	36
9. Cross Product .....	36
10. Operator $\nabla$ : Gradient, Divergence, and Curl .....	37
11. Symmetric and Antisymmetric Tensors .....	39
12. Eigenvalues and Eigenvectors of a Symmetric Tensor .....	40
13. Gauss's Theorem .....	42
14. Stokes's Theorem .....	43
15. Comma Notation .....	44
16. Boldface versus Indicical Notation .....	45
Exercises .....	45
Literature Cited .....	46
Supplemental Reading .....	46

**Chapter 3****Kinematics**

1. Introduction .....	47
2. Lagrangian and <b>Eulerian</b> Specifications .....	48
3. Material Derivative .....	49
4. Streamline, Path Line, and Streak Line .....	51
5. Reference Frame and Streamline Pattern .....	53
6. Linear Strain Rate .....	54
7. Shear Strain Rate .....	55
8. Vorticity and Circulation .....	56
9. Relative Motion near a Point: Principal Axes .....	58
10. Kinematic Considerations of Parallel Shear Flows .....	61
11. Kinematic Considerations of Vortex Flows .....	62
12. One-, Two-, and Three-Dimensional Flows .....	66
13. The Stream Function .....	66

14. Polar Coordinates. ....	69
Exercises .....	70
Supplemental Reading. ....	73

## *Chapter 4*

### Conservation Laws

1. Introduction .....	74
2. Time Derivatives of Volume Integrals .....	75
3. Conservation of Mass .....	77
4. Origin of Forces in Fluid .....	79
5. Stress at a Point .....	81
6. Conservation of Momentum. ....	83
7. Momentum Principle for a Fixed Volume .....	84
8. Angular Momentum Principle for a Fixed Volume .....	87
9. Constitutive Equation for Newtonian Fluid .....	89
10. Navier-Stokes Equation .....	93
11. Rotating Frame. ....	94
12. Mechanical Energy Equation .....	99
13. First Law of Thermodynamics: Thermal Energy Equation .....	103
14. Second Law of Thermodynamics: Entropy Production .....	105
15. Bernoulli Equation .....	106
16. Applications of Bernoulli's Equation .....	109
17. Boussinesq Approximation .....	112
Exercises .....	116
Literature Cited .....	117
Supplemental Reading. ....	118

## *Chapter 5*

### Vorticity Dynamics

1. Introduction .....	<b>119</b>
2. Vortex Lines and Vortex Tubes .....	120
3. Role of Viscosity in Rotational and Irrotational Vortices .....	121
4. Kelvin's Circulation Theorem .....	124
5. Vorticity Equation in a Nonrotating Frame. ....	129
6. Vorticity Equation in a Rotating Frame .....	130
7. Interaction of Vortices. ....	135

8. Vortex Sheet . . . . .	138
Exercises . . . . .	139
Literature Cited . . . . .	140
Supplemental Reading . . . . .	140

## Chapter 6

### Irrotational Flow

1. Relevance of Irrotational Flow Theory . . . . .	<b>141</b>
2. Velocity Potential: Laplace Equation . . . . .	<b>143</b>
3. Application of Complex Variables . . . . .	145
4. Flow at a Wall Angle . . . . .	147
5. Sources and Sinks . . . . .	<b>149</b>
6. Irrotational Vortex . . . . .	149
7. Doublet . . . . .	<b>150</b>
8. Flow past a Half Body . . . . .	152
9. Flow past a Circular Cylinder without Circulation . . . . .	<b>153</b>
10. Flow past a Circular Cylinder with Circulation . . . . .	156
11. Forces on a Two-Dimensional Body . . . . .	159
12. Source near a Wall: Method of Images . . . . .	162
13. Conformal Mapping . . . . .	163
14. Flow around an Elliptic Cylinder with Circulation . . . . .	165
15. Uniqueness of Irrotational Flows . . . . .	166
16. Numerical Solution of Plane Irrotational Flow . . . . .	168
17. Axisymmetric Irrotational Flow . . . . .	<b>173</b>
18. Stream Function and Velocity Potential for Axisymmetric Flow . . . . .	175
19. Simple Examples of Axisymmetric Flows . . . . .	176
20. Flow around a Streamlined Body of Revolution . . . . .	178
21. Flow around an Arbitrary Body of Revolution . . . . .	179
22. Concluding Remarks . . . . .	180
Exercises . . . . .	181
Literature Cited . . . . .	183
Supplemental Reading . . . . .	183

## Chapter 7

### Gravity Waves

1. Introduction . . . . .	184
2. The Wave Equation . . . . .	185
3. Wave Parameters . . . . .	187

4. Surface Gravity Waves .....	190
5. Some Features of Surface Gravity Waves .....	194
6. Approximations for Deep and Shallow Water .....	<b>200</b>
7. Influence of Surface Tension .....	<b>205</b>
8. Standing Waves .....	<b>208</b>
<b>9. Group Velocity and Energy Flux. ....</b>	<b>209</b>
10. Group Velocity and Wave Dispersion .....	<b>212</b>
11. Nonlinear Steepening in a Nondispersive Medium .....	216
12. Hydraulic Jump .....	213
13. Finite Amplitude Waves of Unchanging Form in a Dispersive Medium .....	221
14. Stokes's Drift .....	223
15. Waves at a Density Interface between Infinitely Deep Fluids ...	226
16. Waves in a Finite Layer Overlying an Infinitely Deep Fluid ...	229
17. Shallow Layer Overlying an Infinitely Deep Fluid. ....	232
18. Equations of Motion for a Continuously Stratified Fluid .....	234
19. Internal Waves in a Continuously Stratified Fluid .....	236
20. Dispersion of Internal Waves in a Stratified Fluid. ....	240
21. Energy Considerations of Internal Waves in a Stratified Fluid	242
Exercises .....	246
Literature Cited .....	247

**Chapter 8**

**Dynamic Similarity**

1. Introduction .....	248
2. Nondimensional Parameters Determined from Differential Equations .....	249
3. Dimensional Matrix. ....	252
4. Buckingham's Pi Theorem .....	253
5. Nondimensional Parameters and Dynamic Similarity .....	255
6. Comments on Model Testing .....	257
7. Significance of Common Nondimensional Parameters .....	259
Exercises .....	262

**Chapter 9**

**Laminar Flow**

1. Introduction .....	263
2. Analogy between Heat and Vorticity Diffusion. ....	265

3. Pressure Change Due to Dynamic Effects .....	265
4. Steady Flow between Parallel Plates. ....	266
5. Steady Flow in a Pipe .....	270
6. Steady Flow between Concentric Cylinders. ....	271
7. Impulsively Started Plate: Similarity Solutions .....	274
8. Diffusion of a Vortex Sheet .....	280
9. Decay of a Line Vortex .....	282
10. Flow Due to an Oscillating Plate .....	284
11. High and Low Reynolds Number Flows .....	287
12. Creeping Flow around a Sphere .....	289
13. Nonuniformity of Stokes's Solution and Oseen's Improvement	292
14. Final Remarks .....	296
Exercises .....	296
Literature Cited .....	298
Supplemental Reading. ....	298

## *Chapter 10*

### Boundary Layers and Related Topics

1. Introduction .....	299
2. Boundary Layer Approximation .....	300
3. Different Measures of Boundary Layer Thickness .....	305
4. Boundary Layer on a Flat Plate: Blasius Solution .....	307
5. Karman Momentum Integral .....	315
6. Effectsof Pressure Gradient. ....	317
7. Separation .....	318
8. Description of Flow past a Circular Cylinder .....	321
9. Description of Flow past a Sphere .....	327
10. Dynamics of Sports Balls .....	327
11. Two-Dimensional Jets .....	333
12. Perturbation Techniques .....	<b>336</b>
13. An Example of a Regular Perturbation Problem .....	340
14. An Example of a Singular Perturbation Problem .....	342
Exercises .....	347
Literature Cited .....	348
Supplemental Reading .....	348

**Chapter 11****Instability**

1. Introduction .....	350
2. Method of Normal Modes .....	351
3. Thermal Instability: The Bénard Problem .....	352
4. Double-Diffusive Instability .....	363
5. Centrifugal Instability: Taylor Problem .....	368
6. Kelvin-Helmholtz Instability .....	373
7. Instability of Continuously Stratified Parallel Flows .....	381
8. Squire's Theorem and Orr-Sommerfeld Equation .....	387
9. <b>Inviscid</b> Stability of Parallel Flows .....	391
10. Some Results of Parallel Viscous Flows. ....	395
11. Experimental Verification of Boundary Layer Instability .....	<b>401</b>
12. Comments on Nonlinear Effects .....	402
13. Transition .....	403
14. Deterministic Chaos. ....	405
Exercises .....	413
Literature Cited .....	415

**Chapter 12****Turbulence**

1. Introduction .....	416
2. Historical Notes .....	418
3. Averages. ....	420
4. Correlations and Spectra. ....	423
5. Averaged Equations of Motion .....	426
6. Kinetic Energy Budget of Mean Flow .....	433
7. Kinetic Energy Budget of Turbulent Flow. ....	435
8. Turbulence Production and Cascade .....	438
9. Spectrum of Turbulence in Inertial <b>Subrange</b> .....	441
10. Wall-Free Shear Flow .....	443
11. Wall-Bounded Shear Flow .....	448
12. Eddy Viscosity and Mixing Length .....	455
13. Coherent Structures in a Wall Layer. ....	458
14. Turbulence in a Stratified Medium .....	460
15. Taylor's Theory of Turbulent Dispersion. ....	466
Exercises .....	471
Literature Cited .....	473

**Chapter 13****Geophysical Fluid Dynamics**

1. Introduction .....	474
2. Vertical Variation of Density in Atmosphere and Ocean .....	476
3. Equations of Motion .....	478
4. Approximate Equations for a Thin Layer on a Rotating Sphere	481
5. Geostrophic Flow. ....	484
6. Ekman Layer at a Free Surface .....	489
7. Ekman Layer on a Rigid Surface .....	492
8. Shallow Water Equations .....	496
9. Normal Modes in a Continuously Stratified Layer .....	498
10. High and Low Frequency Regimes in Shallow Water Equations	504
11. Gravity Waves with Rotation .....	506
12. Kelvin Wave.. .....	509
13. Potential Vorticity Conservation in Shallow Water Theory. ....	513
14. Internal Waves .....	517
15. Rossby Wave.....~ .....	526
16. Barotropic Instability. ....	532
17. Baroclinic Instability .....	588
18. Geostrophic Turbulence .....	541
Exercises .....	545
Literature Cited .....	546

**Chapter 14****Aerodynamics**

1. Introduction .....	547
2. The Aircraft and Its Controls. ....	548
3. Airfoil Geometry .....	550
4. Forces on an Airfoil .....	551
5. Kutta Condition .....	552
6. Generation of Circulation .....	554
7. Conformal Transformation for Generating Airfoil Shape .....	556
8. Lift of Zhukhovski Airfoil .....	560
9. Wing of Finite Span. ....	562
10. Lifting Line Theory of Prandtl and <b>Lanchester</b>   .....	564
11. Results for Elliptic Circulation Distribution .....	568
12. Lift and Drag Characteristics of Airfoils .....	571
13. Propulsive Mechanisms of Fish and Birds. ....	573

14. Sailing against the Wind .....	575
Exercises .....	576
Literature Cited .....	577
Supplemental Reading .....	578

**Chapter 15**

**Compressible Flow**

1. Introduction .....	579
2. Speed of Sound .....	583
3. Basic Equations for One-Dimensional Flow .....	585
4. Stagnation and Sonic Properties .....	588
5. Area-Velocity Relations in One-Dimensional Isentropic Flow .....	590
6. Normal Shockwave .....	597
7. Operation of Nozzles at Different Back Pressures .....	601
8. Mach Cone .....	606
9. Oblique Shockwave .....	608
10. Expansion and Compression in Supersonic Flow .....	613
11. Thin Airfoil Theory in Supersonic Flow .....	614
Exercises .....	616
Literature Cited .....	617
Supplemental Reading .....	617

**Appendix A**

**Some Properties of Common Fluids**

A1. Useful Conversion Factors .....	<b>618</b>
A2. Properties of Pure Water at Atmospheric Pressure .....	619
A3. Properties of Dry Air at Atmospheric Pressure .....	619
A4. Properties of Standard Atmosphere .....	620

**Appendix B**

**Curvilinear Coordinates**

B1. Cylindrical Polar Coordinates .....	621
B2. Plane Polar Coordinates .....	623
B3. Spherical Polar Coordinates .....	624

*Appendix C*

## Founders of Modern Fluid Dynamics

Ludwig Prandtl (1875-1953) . . . . .	626
Geoffrey Ingram Taylor (1886-1975) . . . . .	627
Supplemental Reading . . . . .	628
Index . . . . .	629
