

Contents

1. Elementary Newtonian Mechanics	1
1.1 Newton's Laws (1687) and Their Interpretation	1
1.2 Uniform Rectilinear Motion and Inertial Systems	4
1.3 Inertial Frames in Relative Motion	6
1.4 Momentum and Force	6
1.5 Typical Forces. A Remark About Units	8
1.6 Space, Time, and Forces	10
1.7 The Two-Body System with Internal Forces	11
1.7.1 Center-of-Mass and Relative Motion	11
1.7.2 Example: The Gravitational Force Between Two Celestial Bodies (Kepler's Problem)	12
1.7.3 Center-of-Mass and Relative Momentum in the Two-Body System	18
1.8 Systems of Finitely Many Particles	18
1.9 The Principle of Center-of-Mass Motion	19
1.10 The Principle of Angular-Momentum Conservation	20
1.11 The Principle of Energy Conservation	20
1.12 The Closed n -Particle System	21
1.13 Galilei Transformations	22
1.14 Space and Time with Galilei Invariance	25
1.15 Conservative Force Fields	28
1.16 One-Dimensional Motion of a Point Particle	30
1.17 Examples of Motion in One Dimension	30
1.17.1 The Harmonic Oscillator	30
1.17.2 The Planar Mathematical Pendulum	33
1.18 Phase Space for the n -Particle System (in \mathbb{R}^3)	34
1.19 Existence and Uniqueness of the Solutions of $\ddot{x} = \mathcal{F}(x, t)$	35
1.20 Physical Consequences of the Existence and Uniqueness Theorem	36
1.21 Linear Systems	38
1.21.1 Linear, Homogeneous Systems	39
1.21.2 Linear, Inhomogeneous Systems	39
1.22 Integrating One-Dimensional Equations of Motion	40
1.23 Example: The Planar Pendulum for Arbitrary Deviations from the Vertical	41
1.24 Example: The Two-Body System with a Central Force	44

1.25 Rotating Reference Systems: Coriolis and Centrifugal Forces	50
1.26 Examples of Rotating Reference Systems	52
1.27 Scattering of Two Particles that Interact via a Central Force: Kinematics	55
1.28 Two-Particle Scattering with a Central Force: Dynamics	58
1.29 Example: Coulomb Scattering of Two Particles with Equal Mass and Charge	63
1.30 Mechanical Bodies of Finite Extension	66
1.3 1 Time Averages and the Virial Theorem	70
Appendix: Practical Examples	72
2. The Principles of Canonical Mechanics	77
2.1 Constraints and Generalized Coordinates	77
2.1.1 Definition of Constraints	77
2.1.2 Generalized Coordinates	79
2.2 D'Alembert's Principle	79
2.2.1 Definition of Virtual Displacements	79
2.2.2 The Static Case	80
2.2.3 The Dynamical Case	80
2.3 Lagrange's Equations	82
2.4 Examples of the Use of Lagrange's Equations	83
2.5 A Digression on Variational Principles	85
2.6 Hamilton's Variational Principle (1834)	88
2.7 The Euler-Lagrange Equations	88
2.8 Further Examples of the Use of Lagrange's Equations	89
2.9 A Remark About Nonuniqueness of the Lagrangian Function	91
2.10 Gauge Transformations of the Lagrangian Function	92
2.11 Admissible Transformations of the Generalized Coordinates	93
2.12 The Hamiltonian Function and Its Relation to the Lagrangian Function L	94
2.13 The Legendre Transformation for the Case of One Variable	95
2.14 The Legendre Transformation for the Case of Several Variables . .	97
2.15 Canonical Systems	98
2.16 Examples of Canonical Systems	99
2.17 The Variational Principle Applied to the Hamiltonian Function . .	100
2.18 Symmetries and Conservation Laws	101
2.19 Noether's Theorem	102
2.20 The Generator for Infinitesimal Rotations About an Axis	104
2.21 More About the Rotation Group	105
2.22 Infinitesimal Rotations and Their Generators	108
2.23 Canonical Transformations	109
2.24 Examples of Canonical Transformations	113
2.25 The Structure of the Canonical Equations	114
2.26 Example: Linear Autonomous Systems in One Dimension	116

2.27	Canonical Transformations in Compact Notation	117
2.28	On the Symplectic Structure of Phase Space	119
2.29	Liouville's Theorem	122
2.29.1	The Local Form	123
2.29.2	The Global Form	124
2.30	Examples of Liouville's Theorem	125
2.31	Poisson Brackets	128
2.32	Properties of Poisson Brackets	131
2.33	Infinitesimal Canonical Transformations	133
2.34	Integrals of the Motion	134
2.35	The Hamilton-Jacobi Differential Equation	137
2.36	Examples for the Use of the Hamilton-Jacobi Equation	138
2.37	The Hamilton-Jacobi Equation and Integrable Systems	142
2.37.1	Local Rectification of Hamiltonian Systems	142
2.37.2	Integrable Systems	146
2.37.3	Angle and Action Variables	151
2.38	Perturbing Quasiperiodic Hamiltonian Systems	152
2.39	Autonomous, Nondegenerate Hamiltonian Systems in the Neighborhood of Integrable Systems	155
2.40	Examples. The Averaging Principle	156
2.40.1	The Anharmonic Oscillator	156
2.40.2	Averaging of Perturbations	158
	Appendix: Practical Examples	161
3.	The Mechanics of Rigid Bodies	167
3.1	Definition of Rigid Body	167
3.2	Infinitesimal Displacement of a Rigid Body	169
3.3	Kinetic Energy and the Inertia Tensor	171
3.4	Properties of the Inertia Tensor	173
3.5	Steiner's Theorem	176
3.6	Examples of the Use of Steiner's Theorem	177
3.7	Angular Momentum of a Rigid Body	180
3.8	Force-Free Motion of Rigid Bodies	182
3.9	Another Parametrization of Rotations: The Euler Angles	184
3.10	Definition of Eulerian Angles	186
3.11	Equations of Motion of Rigid Bodies	187
3.12	Euler's Equations of Motion	190
3.13	Euler's Equations Applied to a Force-Free Top	193
3.14	The Motion of a Free Top and Geometric Constructions	197
3.15	The Rigid Body in the Framework of Canonical Mechanics	200
3.16	Example: The Symmetric Children's Top in a Gravitational Field	204
3.17	More About the Spinning Top	206
3.18	Spherical Top with Friction: The "Tippe Top"	207

3.18.1	Conservation Law and Energy Considerations	209
3.18.2	Equations of Motion and Solutions with Constant Energy	211
	Appendix: Practical Examples	215
4.	Relativistic Mechanics	219
4.1	Failures of Nonrelativistic Mechanics	220
4.2	Constancy of the Speed of Light	223
4.3	The Lorentz Transformations	224
4.4	Analysis of Lorentz and Poincaré Transformations	230
4.4.1	Rotations and Special Lorentz Transformations ("Boosts")	232
4.4.2	Interpretation of Special Lorentz Transformations	235
4.5	Decomposition of Lorentz Transformations into Their Components	236
4.5.1	Proposition on Orthochronous, Proper Lorentz Transformations	236
4.5.2	Corollary of the Decomposition Theorem and Some Consequences	238
4.6	Addition of Relativistic Velocities	241
4.7	Galilean and Lorentzian Space-Time Manifolds	244
4.8	Orbital Curves and Proper Time	248
4.9	Relativistic Dynamics	249
4.9.1	Newton's Equation	249
4.9.2	The Energy-Momentum Vector	251
4.9.3	The Lorentz Force	254
4.10	Time Dilatation and Scale Contraction	256
4.11	More About the Motion of Free Particles	258
4.12	The Conformal Group	261
5.	Geometric Aspects of Mechanics	263
5.1	Manifolds of Generalized Coordinates	264
5.2	Differentiable Manifolds	267
5.2.1	The Euclidean Space \mathbb{R}^n	267
5.2.2	Smooth or Differentiable Manifolds	269
5.2.3	Examples of Smooth Manifolds	271
5.3	Geometrical Objects on Manifolds	275
5.3.1	Functions and Curves on Manifolds	276
5.3.2	Tangent Vectors on a Smooth Manifold	278
5.3.3	The Tangent Bundle of a Manifold	280
5.3.4	Vector Fields on Smooth Manifolds	281
5.3.5	Exterior Forms	285
5.4	Calculus on Manifolds	287
5.4.1	Differentiable Mappings of Manifolds	288
5.4.2	Integral Curves of Vector Fields	290
5.4.3	Exterior Product of One-Forms	291

5.4.4	The Exterior Derivative	293
5.4.5	Exterior Derivative and Vectors in \mathbb{R}^3	295
5.5	Hamilton-Jacobi and Lagrangian Mechanics	297
5.5.1	Coordinate Manifold Q , Velocity Space TQ , and Phase Space T^*Q	298
5.5.2	The Canonical One-Form on Phase Space	301
5.5.3	The Canonical, Symplectic Two-Form on A^4	304
5.5.4	Symplectic Two-Form and Darboux's Theorem	306
5.5.5	The Canonical Equations	309
5.5.6	The Poisson Bracket	312
5.5.7	Time-Dependent Hamiltonian Systems	315
5.6	Lagrangian Mechanics and Lagrange Equations	317
5.6.1	The Relation Between the Two Formulations of Mechanics	317
5.6.2	The Lagrangian Two-Form	319
5.6.3	Energy Function on TQ and Lagrangian Vector Field ...	320
5.6.4	Vector Fields on Velocity Space TQ and Lagrange Equations	322
5.6.5	The Legendre Transformation and the Correspondence of Lagrangian and Hamiltonian Functions	324
5.7	Riemannian Manifolds in Mechanics	327
5.7.1	Affine Connection and Parallel Transport	328
5.7.2	Parallel Vector Fields and Geodesics	330
5.7.3	Geodesics as Solutions of Euler-Lagrange Equations	331
5.7.4	Example: Force-Free Asymmetric Top	332
6.	Stability and Chaos	335
6.1	Qualitative Dynamics	335
6.2	Vector Fields as Dynamical Systems	336
6.2.1	Some Definitions of Vector Fields and Their Integral Curves	338
6.2.2	Equilibrium Positions and Linearization of Vector Fields	340
6.2.3	Stability of Equilibrium Positions	343
6.2.4	Critical Points of Hamiltonian Vector Fields	347
6.2.5	Stability and Instability of the Free Top	349
6.3	Long-Term Behavior of Dynamical Flows and Dependence on External Parameters	351
6.3.1	Flows in Phase Space	352
6.3.2	More General Criteria for Stability	353
6.3.3	Attractors	356
6.3.4	The Poincaré Mapping	360
6.3.5	Bifurcations of Flows at Critical Points	364
6.3.6	Bifurcations of Periodic Orbits	368

6.4	Deterministic Chaos	370
6.4.1	Iterative Mappings in One Dimension	370
6.4.2	Qualitative Definitions of Deterministic Chaos	372
6.4.3	An Example: The Logistic Equation	376
6.5	Quantitative Measures of Deterministic Chaos	381
6.5.1	Routes to Chaos	381
6.5.2	Liapunov Characteristic Exponents	385
6.5.3	Strange Attractors	387
6.6	Chaotic Motions in Celestial Mechanics	389
6.6.1	Rotational Dynamics of Planetary Satellites	390
6.6.2	Orbital Dynamics of Asteroids with Chaotic Behavior . . .	395
7.	Continuous Systems	399
7.1	Discrete and Continuous Systems	399
7.2	Transition to the Continuous System	403
7.3	Hamilton's Variational Principle for Continuous Systems	405
7.4	Canonically Conjugate Momentum and Hamiltonian Density	407
7.5	Example: The Pendulum Chain	408
7.6	Comments and Outlook	412
Exercises	417
Chapter 1: Elementary Newtonian Mechanics	417
Chapter 2: The Principles of Canonical Mechanics	424
Chapter 3: The Mechanics of Rigid Bodies	432
