Preface

page ix

Tologue

xi

Chapter 1. Sound waves

1.1	The wave equation	1
1.2	The speed of sound	5
1.3	Acoustic energy and intensity	11
1.4	The simple source	17
1.5	The acoustic dipole	23
1.6	Compact source regions in general	34
1.7	Compact source regions with dipole far fields	35
1.8	Ripple-tank simulations	41
1.9	Scattering by compact bodies	59
1.10	Quadrupole radiation	57
1.11	Radiation from spheres	65
1.12	Radiation from plane walls	79
1.13	Dissipation of acoustic energy	76
	Exercises on chapter 1	85

Chapter 2. One-dimensional waves in fluids

2.1	Longitudinal waves in tubes and channels	89
2.2	Examples, including elastic tubes and open channels	94
2.3	Transmission of waves through junctions	100
2.4	Propagation through branching systems	107
2.5	Cavities, constrictions, resonators	113
2.6	Linear propagation with gradually varying composition and cross-section	120
2.7	Frictional attenuation	128
2.8	Nonlinear theory of plane waves	137

Contents

vii

Epilogue

Part 1	A variety of waves in fluids	437
Part 2	Nonlinear effects on dispersive wave propagation	459

Bibliography

(indexed as pages A to Q)

Part 1	Some basic texts	[A] 47
Part 2	Acoustic literature	[C] 47
Part 3	Water-wave literature	[G] 476
Part 4	Stratified-fluids literature	[F] 479
Part 5	A bibliography for the epilogue	[M] 483
