

Contents

I The nucleus and its particles

1 Historical introduction	3
1.1 Layers of matter	3
1.2 The early history of nuclear and particle physics	6
1.3 Nuclear and particle physics in their maturity	9
2 Radioactivity	11
2.1 Discovery of natural and artificial radioactivity and the law of radioactive decay	11
2.2 Alpha-decay	16
2.3 Beta-decay	17
2.3.1 β^- -decay	17
2.3.2 β^+ -decay	20
2.4 Gamma-decay, conversion electrons and isomeric transitions	21
2.5 Natural radioactive isotopes	22
2.6 Radioactive decay series	26
2.7 Build-up and decay of artificial radioactive isotopes	29
2.8 Units of radioactivity	32
2.9 The use of radioactivity in pure and applied research	34
Problems	37
3 The discovery of the nucleus	39
3.1 Rutherford's experiment	39
3.2 Units and definitions	45
Problems	47
4 Particle accelerators and neutron sources	49
4.1 Introduction	49
4.2 Types of accelerators	49
4.3 Fixed target accelerators	51
4.4 Electrostatic accelerators	52
4.5 Cyclic accelerators	55
4.5.1 The linear accelerator	55
4.5.2 The betatron	57
4.5.3 The cyclotron	58
4.5.4 The synchrocyclotron	62

4.5.5	The synchrotron	63
4.6	Colliders	65
4.7	Neutron sources	68
	Problems	71
5	Particle detectors	74
5.1	Introduction	74
5.2	Detectors which identify a particle or radiation through the signal they produce	74
5.2.1	Heavy charged particles	74
5.2.2	Specific ionization and range of a heavy particle	79
5.2.3	Electrons	81
5.2.4	Visual detectors	84
5.2.5	Charge-collecting gas detectors	87
5.2.6	Semiconductor detectors	90
5.2.7	Scintillators	95
5.2.8	Čerenkov radiation	96
5.2.9	Photons	98
5.2.10	Calorimeters	104
5.2.11	Neutral particles	105
5.3	Electromagnetic spectrometers	111
5.4	Activation detectors	117
	Problems	119
6	Basic forces	124
6.1	Basic forces and subnuclear particles	124
6.2	Exchange character of basic forces	126
6.3	Strength of the basic forces	128
	Problems	129
7	The leptons	130
7.1	Introduction	130
7.2	Evidence for the conservation of lepton number and of the lepton generation number	131
7.3	Observation of the electron neutrino and the electron anti-neutrino	133
7.4	Evidence for the different nature of neutrinos of the three lepton generations	134
7.5	Neutrino helicity	136
7.6	Neutrino mass	138
7.7	The solar neutrino problem	139
7.8	The W and Z gauge bosons	142
	Problems	145

8 The hadrons	147
8.1 Baryons and mesons	147
8.2 Hadron quantum numbers	147
Problems	153
9 Quarks	155
9.1 The quarks	155
9.2 Hadron supermultiplets	159
9.3 Interaction potential between massive quarks	163
Problems	166
II Nuclear forces	
10 The laws of invariance	171
10.1 The two-nucleon interaction	171
10.2 Conservation of energy	172
10.3 Conservation of linear momentum	172
10.4 Conservation of angular momentum	173
10.4.1 Conservation of orbital angular momentum	173
10.4.2 Spin and the conservation of the total angular momentum	174
10.5 Isotopic spin	177
10.5.1 The generalized Pauli principle	178
10.5.2 Majorana and Heisenberg exchange operators	179
10.5.3 Properties of the isospin operators	180
10.5.4 Charge symmetry of nuclear forces	182
10.5.5 Charge independence of nuclear forces	183
10.6 Conservation of parity	185
10.7 Charge conjugation	190
10.8 CP violation	192
10.9 Time reversal	194
10.10 The CPT theorem	197
Problems	199
11 Boson field theory and phenomenological potentials	202
11.1 Introduction	202
11.2 Pseudo-scalar field theory	203
11.3 Properties of the tensor interaction	205
11.4 Properties of OPEP for the two-nucleon system	206
11.5 Scalar and vector potentials	207
11.6 Phenomenological two-nucleon potentials	208
Problems	210

12 Few-nucleon systems	211
12.1 Introduction	211
12.2 The deuteron	211
12.3 Three-nucleon systems	219
12.4 The α -particle	222
Problems	223
13 The theory of scattering	225
13.1 Reference frames and transformation laws	225
13.2 The first-order Born approximation	227
13.3 The partial wave theory of elastic scattering	230
13.4 The second-order Born approximation	234
13.5 Scattering of spin $\frac{1}{2}$ particles from a spin zero target	236
Problems	240
14 Nucleon-nucleon scattering	242
14.1 The nucleon-nucleon interaction	242
14.2 Low energy neutron-proton scattering	245
14.3 Scattering of neutrons by ortho- and para-hydrogen	248
14.4 Effective range theory	250
14.5 Low energy proton-proton scattering	252
14.6 Nucleon-nucleon scattering at high energies	254
Problems	263
III Nuclear structure	
15 Nuclear systematics	267
15.1 Types of nuclei	267
15.2 Nuclear masses and energies	270
15.3 Nuclear charge and matter distributions	274
15.4 Nuclear deformation	280
Problems	285
16 Nuclear properties	289
16.1 Nuclear states and nuclear structure	289
16.2 Nuclear spin and isospin	294
16.2.1 Spin	294
16.2.2 Isospin	296
16.3 Nuclear states and level densities	297
16.4 Clustering in nuclei	304
16.5 Nuclear matter	306
16.6 Hypernuclei	308
Problems	312

17 Nuclear models	314
17.1 Types of nuclear models	314
17.2 Early nuclear models	315
17.3 The Fermi gas model	317
17.4 The shell model	321
17.5 The rotational model	336
17.6 The vibrational model	349
17.7 The Nilsson model	356
17.8 The α -particle model	356
17.9 The interacting boson model	359
Problems	361
18 Nuclear decay	369
18.1 Introduction	369
18.2 Alpha-decay	371
18.3 Beta-decay	377
18.3.1 The Fermi theory of β -decay	379
18.3.2 Selection rules	383
18.3.3 The neutrino mass	384
18.3.4 Double P-decay	387
18.4 Gamma-decay	388
18.4.1 Energetics	388
18.4.2 Classical electromagnetic theory	389
18.4.3 Transition to quantum mechanics	391
18.4.4 Weisskopf units	392
18.4.5 Selection rules	393
18.4.6 Angular distribution measurements	394
18.4.7 Internal conversion	395
18.4.8 The Mössbauer effect	396
18.5 Fission	397
18.6 Cluster decay	405
Problems	407
19 Nuclear reactions	
19.1 B General features of nuclear reactions	417
19.1 Experimental methods	417
19.2 Reaction mechanisms	418
Problems	423
20 Direct reactions	425
20.1 Introduction	425
20.2 The optical model of elastic scattering	425
20.3 The theory of transitions	435
20.4 Inelastic scattering	438

20.5	Charge-exchange reactions	440
20.6	Nucleon transfer reactions	441
20.7	Break-up and knock-out reactions	448
	Problems	451
21	Compound nucleus reactions	455
21.1	The compound nucleus hypothesis	455
21.2	Slow neutron resonances and the Breit-Wigner theory	457
21.3	The optical model description of the average cross-sections	461
21.4	The strength function	463
21.5	Higher energy processes: the Weisskopf-Ewing and Hauser-Feshbach theories	465
	21.5.1 The Weisskopf-Ewing theory	465
	21.5.2 The Hauser and Feshbach theory	471
	21.5.3 Semiclassical approximations for the angular distributions	474
21.6	Fluctuations of statistical reaction cross-sections	476
21.7	Photonuclear reactions	480
	Problems	483
22	Pre-equilibrium reactions	488
22.1	Types of nuclear reactions	488
22.2	Elastic scattering	488
22.3	Inelastic scattering and nucleon transfer reactions	489
22.4	Pre-equilibrium reactions	489
	22.4.1 The exciton model	494
	22.4.2 The theory of Feshbach, Kerman and Koonin	497
	22.4.3 Monte Carlo calculations	501
	Problems	504
23	Heavy-ion reactions	506
23.1	Introduction	506
23.2	Fusion reactions	511
	23.2.1. Fusion cross-section	511
	23.2.2 Thermalization of the composite nucleus	516
	23.2.3 Evaporation from equilibrated nuclei	520
23.3	Projectile break-up and incomplete fusion reactions	523
23.4	Deep inelastic collisions	528
23.5	Peripheral and distant collisions	531
	23.5.1 Elastic and inelastic scattering	531
	23.5.2 Nucleon transfer reactions	535
23.6	Interaction of relativistic heavy ions	537
	Problems	541

V Applications

24 Nuclear reactors	545
24.1 Introduction	545
24.2 Fission reactors	546
24.2.1 Thermal reactors	547
24.2.2 Fast reactors	552
24.3 Fusion reactors	553
24.2.1 MCF reactors	556
24.3.2 ICF reactors	558
24.4 Muon catalysed fusion	559
24.5 Concluding remarks	560
Problems	561
25 Cosmology and nuclear astrophysics	562
25.1 Introduction	562
25.2 Cosmology and the Big Bang theory	562
25.3 Evolution of the primordial universe	566
25.4 Primordial nucleosynthesis	569
25.5 Nucleosynthesis and energy production in stars	571
25.6 Nucleosynthesis of nuclei with $A \geq 60$	576
25.7 Star evolution	577
Problems	580

Appendices

1	The composition of angular momenta	585
2	The S matrix	591
3	Physical constants	596
	3.1 Frequently used nuclear constants	596
	3.2 Fundamental constants	597
4	Table of masses and isotopes	600
5	Brief outline of the weak interaction theory	673
	Chapter bibliographies	677
	General bibliography	708
