Preface xix

List of Symbols xxi

Introduction I

1 The Membrane Equation 5

- 1.1 Structure of the Passive Neuronal Membrane 5
 - 1.1.1 Resting Potential 6
 - 1.1.2 Membrane Capacity 6
 - 1.1.3 Membrane Resistance 8
- 1.2 A Simple RC Circuit 8
- 1.3 RC Circuits as Linear Systems 12
 - 1.3.1 Filtering by RC Circuits 12
- 1.4 Synaptic Input 14
- 1.5 Synaptic Input Is Nonlinear 19
 - 1.5.1 Synaptic Input, Saturation, and the Membrane Time Constant 20
 - 1.5.2 Synaptic Interactions among Excitation and Shunting Inhibition 20
 - 1.5.3 Gain Normalization in Visual Cortex and Synaptic Input 23
- 1.6 Recapitulation 23

2 Linear Cable Theory 25

- 2.1 Basic Assumptions Underlying One-Dimensional Cable Theory 26
 - 2.1.1 Linear Cable Equation 30
- 2.2 Steady-State Solutions 32
 - 2.2.1 Infinite Cable 32
 - 2.2.2 Finite Cable 33
- 2.3 Time-Dependent Solutions 37
 - 2.3.1 Infinite Cable 37
 - 2.3.2 Finite Cable 43
- 2.4 Neuronal Delays and Propagation Velocity 44
- 2.5 Recapitulation 47

3 Passive Dendritic Trees 49

- 3.1 Branched Cables 53
 - 3.1.1 What Happens at Branch Points? 53
- 3.2 Equivalent Cylinder 55

3.3	Solving the Linear Cable Equation for Branched Structures	58
3.3.1	<i>Exact Methods</i>	59
3.3.2	<i>Compartmental Modeling</i>	59
3.4	Transfer Resistances	60
3.4.1	<i>General Definition</i>	61
3.4.2	<i>An Example</i>	62
3.4.3	<i>Properties of \bar{K}_{ij}</i>	62
3.4.4	<i>Transfer Resistances in a Pyramidal Cell</i>	64
3.5	Measures of Synaptic Efficiency	66
3.5.1	<i>Electrotonic Distance</i>	66
3.5.2	<i>Voltage Attenuation</i>	67
3.5.3	<i>Charge Attenuation</i>	70
3.5.4	<i>Graphical Morphoelectrotonic Transforms</i>	71
3.6	Signal Delays in Dendritic Trees	75
3.6.1	<i>Experimental Determination of $t_{d, \dots}$</i>	75
3.6.2	<i>Local and Propagation Delays in Dendritic Trees</i>	77
3.6.3	<i>Dependence of Fast Synaptic Inputs on Cable Parameters</i>	80
3.7	Recapitulation	82

4 Synaptic Input 85

4.1	Neuronall and Synaptic Packing Densities	87
4.2	Synaptic Transmission Is Stochastic	87
4.2.1	<i>Probability of Synaptic Release p</i>	89
4.2.2	<i>What Is the Synaptic Weight?</i>	91
4.3	Neurotransmitters	92
4.4	Synaptic Receptors	94
4.5	Synaptic Input as Conductance Change	96
4.5.1	<i>Synaptic Reversal Potential in Series with an Increase in Conductance</i>	96
4.5.2	<i>Conductance Decreasing Synapses</i>	98
4.6	Excitatory NMDA and Non-NMDA Synaptic Input	99
4.7	Inhibitory GABAergic Synaptic Input	105
4.8	Postsynaptic Potential	106
4.8.1	<i>Stationary Synaptic Input</i>	107
4.8.2	<i>Transient Synaptic Input</i>	109
4.8.3	<i>Infinitely Fast Synaptic Input</i>	110
4.9	Visibility of Synaptic Inputs	111
4.9.1	<i>Input Impedance in the Presence of Synaptic Input</i>	112
4.10	Electrical Gap Junctions	112
4.11	Recapitulation	115

5 Synaptic Interactions in a Passive Dendritic Tree 117

5.1	Nonlinear Interaction among Excitation and Inhibition	118
-----	---	-----

5.1.1	<i>Absolute versus Relative Suppression</i>	118
5.1.2	<i>General Analysis of Synaptic Interaction in a Passive Tree</i>	121
5.1.3	<i>Location of the Inhibitory Synapse</i>	123
5.1.4	<i>Shunting Inhibition Implements a “Dirty” Multiplication</i>	124
5.1.5	<i>Hyperpolarizing Inhibition Acts Like a Linear Subtraction</i>	128
5.1.6	<i>Functional Interpretation of the Synaptic Architecture and Dendritic Morphology: AND-NOT Gates</i>	128
5.1.7	<i>Retinal Directional Selectivity and Synaptic Logic</i>	130
5.2	Nonlinear Interactions among Excitatory Synapses	132
5.2.1	<i>Sensitivity of Synaptic Input to Spatial Clustering</i>	132
5.2.2	<i>Cluster Sensitivity for Pattern Discrimination</i>	136
5.2.3	<i>Detecting Coincident Input from the Two Ears</i>	138
5.3	Synaptic Microcircuits	138
5.4	Recapitulation	140
6	The Hodgkin-Huxley Model of Action Potential Generation	742
6.1	Basic Assumptions	144
6.2	Activation and Inactivation States	146
6.2.1	<i>Potassium Current I_K</i>	146
6.2.2	<i>Sodium Current I_{Na}</i>	148
6.2.3	<i>Complete Model</i>	151
6.3	Generation of Action Potentials	151
6.3.1	<i>Voltage Threshold for Spike Initiation</i>	152
6.3.2	<i>Refractory Period</i>	154
6.4	Relating Firing Frequency to Sustained Current Input	156
6.5	Action Potential Propagation along the Axon	159
6.5.1	<i>Empirical Determination of the Propagation Velocity</i>	160
6.5.2	<i>Nonlinear Wave Propagation</i>	164
6.6	Action Potential Propagation in Myelinated Fibers	164
6.7	Branching Axons	168
6.8	Recapitulation	171
7	Phase Space Analysis of Neuronal Excitability	772
7.1	The FitzHugh–Nagumo Model	173
7.1.1	<i>Nullclines</i>	175
7.1.2	<i>Stability of the Equilibrium Points</i>	176
7.1.3	<i>Instantaneous Current Pulses: Action Potentials</i>	179
7.1.4	<i>Sustained Current Injection: A Limit Cycle Appears</i>	181
7.1.5	<i>Onset of Nonzero Frequency Oscillations: The Hopf Bifurcation</i>	183
7.2	The Morris-Lecar Model	185
7.2.1	<i>Abrupt Onset of Oscillations</i>	185
7.2.2	<i>Oscillations with Arbitrarily Small Frequencies</i>	186
7.3	More Elaborate Phase Space Models	191
7.4	Recapitulation	191

8 Ionic Channels 793

- 8.1 Properties of Ionic Channels 194
 - 8.1.1 *Biophysics of Channels* 195
 - 8.1.2 *Molecular Structure of Channels* 198
- 8.2 Kinetic Model of the Sodium Channel 200
- 8.3 From Stochastic Channels to Deterministic Currents 202
 - 8.3.1 *Probabilistic Interpretation* 203
 - 8.3.2 *Spontaneous Action Potentials* 208
- 8.4 Recapitulation 210

9 Beyond Hodgkin and Huxley: Calcium and Calcium-Dependent Potassium Currents 272

- 9.1 Calcium Currents 213
 - 9.1.1 *Goldman-Hodgkin-Katz Current Equation* 214
 - 9.1.2 *High-Threshold Calcium Current* 215
 - 9.1.3 *Low-Threshold Transient Calcium Current* 216
 - 9.1.4 *Low-Threshold Spike in Thalamic Neurons* 217
 - 9.1.5 *N-Type Calcium Current* 219
 - 9.1.6 *Calcium as a Measure of the Spiking Activity of the Neuron* 219
- 9.2 Potassium Currents 221
 - 9.2.1 *Transient Potassium Currents and Delays* 221
 - 9.2.2 *Calcium-Dependent Potassium Currents* 223
- 9.3 Firing Frequency Adaptation 224
- 9.4 Other Currents 226
- 9.5 An Integrated View 226
- 9.6 Recapitulation 230

10 Linearizing Voltage-Dependent Currents 232

- 10.1 Linearization of the Potassium Current 233
- 10.2 Linearization of the Sodium Current 236
- 10.3 Linearized Membrane Impedance of a Patch of Squid Axon 239
- 10.4 Functional Implications of Quasi-Active Membranes 243
 - 10.4.1 *Spatio-Temporal Filtering* 243
 - 10.4.2 *Temporal Differentiation* 243
 - 10.4.3 *Electrical Tuning in Hair Cells* 243
- 10.5 Recapitulation 245

11 Diffusion, Buffering, and Binding 248

- 11.1 Diffusion Equation 249
 - 11.1.1 *Random Walk Model of Diffusion* 249
 - 11.1.2 *Diffusion in Two or Three Dimensions* 251
 - 11.1.3 *Diffusion Coefficient* 252
- 11.2 Solutions to the Diffusion Equation 253

- 11.2.1 *Steady-State Solution for an Infinite Cable* 255
- 11.2.2 *Time-Dependent Solution for an Infinite Cable* 255
- 11.2.3 *Square-Root Relationship of Diffusion* 256
- 11.3 **Electrodiffusion and the Nernst-Planck Equation** 259
 - 11.3.1 *Relationship between the **Electrodiffusion** Equation and the Cable Equation* 261
 - 11.3.2 *An Approximation to the Electrodiffusion Equation* 261
- 11.4 **Buffering of Calcium** 263
 - 11.4.1 *Second-Order Buffering* 264
 - 11.4.2 *Higher Order Buffering* 265
- 11.5 **Reaction-Diffusion Equations** 266
 - 11.5.1 *Experimental Visualization of Calcium Transients in Diffusion-Buffered Systems* 267
- 11.6 **Ionic Pumps** 269
- 11.7 **Analogy between the Cable Equation and the Reaction-Diffusion Equation** 270
 - 11.7.1 *Linearization* 271
 - 11.7.2 *Chemical Dynamics and Space and Time Constants of the Diffusion Equation* 272
- 11.8 **Calcium Nonlinearities** 276
- 11.9 **Recapitulation** 277

12 Dendritic Spines 280

- 12.1 **Natural History of Spines** 281
 - 12.1.1 *Distribution of Spines* 281
 - 12.1.2 *Microanatomy of Spines* 282
 - 12.1.3 *Induced Changes in Spine Morphology* 285
- 12.2 **Spines only Connect** 285
- 12.3 **Passive Electrical Properties of Single Spines** 286
 - 12.3.1 *Current Injection into a Spine* 286
 - 12.3.2 *Excitatory Synaptic Input to a Spine* 288
 - 12.3.3 *Joint Excitatory and Inhibitory Input to a Spine* 291
 - 12.3.4 *Geniculate Spine Triad* 293
- 12.4 **Active Electrical Properties of Single Spines** 295
- 12.5 **Effect of Spines on Cables** 298
- 12.6 **Diffusion in Dendritic Spines** 300
 - 12.6.1 *Solutions of the Reaction-Diffusion Equation for Spines* 301
 - 12.6.2 *Imaging Calcium Dynamics in Single Dendritic Spines* 304
- 12.7 **Recapitulation** 306

13 Synaptic Plasticity 308

- 13.1 **Quantal Release** 310
- 13.2 **Short-Term Synaptic Enhancement** 312

- 13.2.1 *Facilitation Is an Increase in Release Probability* 312
- 13.2.2 *Augmentation and Posttetanic Potentiation* 315
- 13.2.3 *Synaptic Release and Presynaptic Calcium* 316
- 13.3 Long-Term Synaptic Enhancement 317
 - 13.3.1 *Long-Term Potentiation* 317
 - 13.3.2 *Short-Term Potentiation* 320
- 13.4 Synaptic Depression 320
- 13.5 Synaptic Algorithms 321
 - 13.5.1 *Hebbian Learning* 322
 - 13.5.2 *Temporally Asymmetric Hebbian Learning Rules* 323
 - 13.5.3 *Sliding Threshold Rule* 324
 - 13.5.4 *Short-Term Plasticity* 324
 - 13.5.5 *Unreliable Synapses: Bug or Feature?* 327
- 13.6 Nonsynaptic Plasticity 327
- 13.7 Recapitulation 329

14 Simplified Models of Individual Neurons 330

- 14.1 Rate Codes, Temporal Coding, and All of That 331
- 14.2 Integrate-and-Fire Models 335
 - 14.2.1 *Perfect or Nonleaky Integrate-and-Fire Unit* 335
 - 14.2.2 *Forgetful or Leaky Integrate-and-Fire Unit* 338
 - 14.2.3 *Other Variants* 339
 - 14.2.4 *Response Time of Integrate-and-Fire Units* 340
- 14.3 Firing Rate Models 341
 - 14.3.1 *Comparing the Dynamics of a Spiking Cell with a Firing Rate Cell* 343
- 14.4 Neural Networks 345
 - 14.4.1 *Linear Synaptic Interactions Are Common to Almost All Neural Networks* 345
 - 14.4.2 *Multiplicative Interactions and Neural Networks* 346
- 14.5 Recapitulation 348

15 Stochastic Models of Single Cells 350

- 15.1 Random Processes and Neural Activity 352
 - 15.1.1 *Poisson Process* 352
 - 15.1.2 *Power Spectrum Analysis of Point Processes* 354
- 15.2 Stochastic Activity in Integrate-and-Fire Models 355
 - 15.2.1 *Interspike Interval Histogram* 356
 - 15.2.2 *Coefficient of Variation* 358
 - 15.2.3 *Spike Count and Fano Factor* 360
 - 15.2.4 *Random Walk Model of Stochastic Activity* 362
 - 15.2.5 *Random Walk in the Presence of a Leak* 365
- 15.3 What Do Cortical Cells Do? 366
 - 15.3.1 *Cortical Cells Fire Randomly* 366

15.3.2 *Pyramidal Cells: Integrator or Coincidence Detector* 368

15.3.3 *Temporal Precision of Cortical Cells* 371

15.4 *Recapitulation* 372

16 **Bursting Cells** 374

16.1 *Intrinsically Bursting Cells* 374

16.2 *Mechanisms for Bursting* 376

16.3 *What Is the Significance of Bursting?* 377

16.4 *Recapitulation* 379

17 **Input Resistance, Time Constants, and Spike Initiation** 387

17.1 *Measuring Input Resistances* 381

17.1.1 *Membrane Chord Conductance* 383

17.1.2 *Membrane Slope Conductance* 383

17.2 *Time Constants for Active Systems* 385

17.3 *Action Potential Generation and the Question of Threshold* 387

17.3.1 *Current-Voltage Relationship* 387

17.3.2 *Stability of the Membrane Voltage* 387

17.3.3 *Voltage Threshold* 389

17.3.4 *Current Threshold* 391

17.3.5 *Charge Threshold* 392

17.3.6 *Voltage versus Current Threshold* 394

17.4 *Action Potential* 394

17.5 *Repetitive Spiking* 395

17.5.1 *Discharge Curve* 395

17.5.2 *Membrane Potential during Spiking Activity* 396

17.6 *Recapitulation* 400

18 **Synaptic Input to a Passive Tree** 402

18.1 *Action of a Single Synaptic Input* 403

18.1.1 *Unitary Excitatory Postsynaptic Potentials and Currents* 403

18.1.2 *Utility of Measures of Synaptic Efficacy* 405

18.1.3 *What Do Unitary EPSPs and EPSCs Tell Us about the Threshold?* 406

18.2 *Massive Synaptic Input* 407

18.2.1 *Relationship between Synaptic Input and Spike Output Jitter* 407

18.2.2 *Cable Theory for Massive Synaptic Input* 410

18.3 *Effect of Synaptic Background Activity* 411

18.3.1 *Input Resistance* 412

18.3.2 *Time Constant* 414

18.3.3 *Electroanatomy* 415

18.3.4 *Resting Potential* 416

18.3.5 *Functional Implications* 417

- 18.4 Relating Synaptic Input to Output Spiking 418
 - 18.4.1 Somatic Current from Distal Synaptic Input 418
 - 18.4.2 Relating f_{out} to f_{in} 420
 - 18.4.3 Functional Considerations 421
- 18.5 Shunting Inhibition Acts Linearly 423
- 18.6 Recapitulation 426

19 Voltage-Dependent Events in the Dendritic Tree 428

- 19.1 Experimental Evidence for Voltage-Dependent Dendritic Membrane Conductances 428
 - 19.1.1 Fast Dendritic Spikes 429
- 19.2 Action Potential Initiation in Cable Structures 430
 - 19.2.1 Effect of Dendritic Geometry on Spike Initiation 431
 - 19.2.2 Biophysical Modeling of Antidromic Spike Invasion 434
- 19.3 Synaptic Input into Active Dendrites: Functional Considerations 437
 - 19.3.1 Back-Propagating Spike as Acknowledgment Signal 437
 - 19.3.2 Implementing logic Computations with Spikes in Spines 437
 - 19.3.3 Coincidence Detection with Dendritic Spikes 439
 - 19.3.4 Nonlinear Spatial Synaptic Interactions Using Active Currents 442
 - 19.3.5 Graded Amplification of Distal Synaptic Input 446
- 19.4 Recapitulation 450

20 Unconventional Computing 452

- 20.1 A Molecular Flip-Flop 452
 - 20.1.1 Autophosphorylating Kinases 452
 - 20.1.2 CaM Kinase II and Synaptic Information Storage 456
- 20.2 Extracellular Resources and Presynaptic Inhibition 458
- 20.3 Computing with Puffs of Gas 459
- 20.4 Programming with Peptides 462
- 20.5 Routing Information Using Neuromodulators 464
- 20.6 Recapitulation 466

21 Computing with Neurons: A Summary 469

- 21.1 Is a Biophysics of Computation Possible? 471
 - 21.1.1 The Many Ways to Multiply 471
 - 21.1.2 A Large Number of Biophysical Mechanisms for Computation 473
 - 21.1.3 Can Different Biophysical Mechanisms Be Selected For? 474
- 21.2 Strategic Questions or How to Find a Topic for a Ph.D. Thesis 477

Appendix A: Passive Membrane Parameters 487

- A.1 Intracellular Resistivity R_i 481
- A.2 Membrane Resistance R_m 482

A.3 Membrane Capacitance C_m 483

Appendix B: A Miniprimer on Linear Systems Analysis 484

Appendix C: Sparse Matrix Methods for Modeling Single Neurons 487

C.1 Linear Cable Equation 488

C.1.1 Unbranched Cables and Tridiagonal Matrices 488

C.1.2 Branched Cables and Hines Matrices 494

C.1.3 Boundary Conditions 495

C.1.4 Eigensystems and Model Fitting 496

C.1.5 Green's Functions and Matrix Inverses 497

C.2 Nonlinear Cable Equations 499

C.2.1 Generalized Hodgkin-Huxley Equations 499

C.2.2 Calcium Buffering 500

C.2.3 Conclusion 503

References 503
