Notation xvii

Preface xxiii

1 Introduction 1
1.1 Simplistic Definition of a Fluid 4
1.2 Rigorous Definition of a Fluid 4
1.3 Continuum Approximation 5
1.4 Microscopic and Macroscopic Views 6
1.5 Thermodynamic Properties of Gases 8
1.6 Compressibility 9
1.7 Surface Tension 11
1.8 Viscosity. 14
1.9 Examples of Viscosity Dominated Flows 16
1.9.1 Couette Flow 16
1.9.2 Hagen-Poiseuille Flow 18
1.10 Fluid-Flow Regimes 19
1.11 Brief History of Fluid Mechanics 20
Problems 22

2 Dimensional Analysis 31
2.1 Basic Premises 32
2.2 Buckingham II Theorem 35
2.2.1 Finding Dimensionless Groupings 35
2.2.2 Interpretation of Results 40
2.2.3 E. S. Taylor's Method 43
2.3 Common Dimensionless Groupings 45
2.4 Dynamic Similitude 47
2.4.1 Similitude for an Airplane 48
2.4.2 Similitude for a Ship 49
Problems 51

3 Effects of Gravity on Pressure 63
3.1 The Hydrostatic Relation 63
3.2 Atmospheric Pressure Variation 66
3.3 Pressure Measurement 68

3.4 Hydrostatic Forces on Plane Surfaces . . . 70
3.5 Hydrostatic Forces on Curved Surfaces . . . 78
3.6 Equivalent Pressure Fields and Superposition . . . 82
3.7 Buoyancy . . . 84
Problems . . . 86

4 Kinematics **103**
4.1 Eulerian Versus Lagrangian Description . . . 103
4.2 Steady and Unsteady Flows . . . 109
4.3 Vorticity and Circulation . . . 110
4.4 Streamlines, Streaklines and Pathlines . . . 114
4.5 Extensive and Intensive Properties . . . 117
4.6 Surface Fluxes . . . 118
4.7 Reynolds Transport Theorem . . . 119
4.8 Vector Calculus and Multiple Integrals . . . 123
Problems . . . 125

5 Conservation of Mass and Momentum **135**
5.1 Conservation of Mass . . . 136
5.2 Conservation of Momentum . . . 138
5.3 Bernoulli's Equation . . . 141
5.4 Velocity Measurement Techniques . . . 147
5.4.1 Stagnation Points . . . 147
5.4.2 Pitot Tube. . . . 148
5.4.3 Pitot-Static Tube . . . 149
5.5 Galilean Invariance of Euler's Equation . . . 150
5.6 Summary of the Conservation Equations . . . 153
Problems . . . 154

6 Control-Volume Method **165**
6.1 Preliminaries . . . 166
6.1.1 Overview of the Method . . . 167
6.1.2 Useful Control-Volume Theorem . . . 169
6.1.3 Fluid Statics Revisited . . . 170
6.2 Conservation of Mass . . . 171
6.2.1 Steady Flow in a Pipe . . . 172
6.2.2 Sphere Falling in a Cylinder . . . 174
6.2.3 Deforming Control Volume . . . 178
6.3 Conservation of Mass and Momentum . . . 181
6.3.1 Channel Flow With Suction . . . 182
6.3.2 Indirect Force Computation-Rotational Flow . . . 185
6.3.3 Indirect Force Computation-Irrotational Flow . . . 187
6.3.4 Reaction Forces . . . 189
6.3.5 Nonuniform Cross-Sectional Velocity Profiles . . . 191
6.4 Accelerating Control Volume . . . 193
6.4.1 Inertial and Noninertial Coordinate Frames . . . 193
6.4.2 Ascending Rocket . . . 195
Problems . . . 199

7 Conservation of Energy 221
7.1 Thermodynamics 221
7.1.1 Fundamental Concepts 222
7.1.2 The First Law of Thermodynamics 225
7.1.3 The Second Law of Thermodynamics 225
7.1.4 Combined First and Second Laws 226
7.1.5 The First Law for a Moving Fluid 227
7.2 Integral Form of the Energy Equation 228
7.3 Differential Form for Adiabatic, Inviscid Flow 231
7.4 Entropy Generation 232
7.5 Relation to Bernoulli's Equation 233
7.6 Approximate Form of the Energy Equation 236
7.7 Flow in Pipes 239
7.7.1 Friction and Head Loss in Straight Pipes 240
7.7.2 Minor Losses and Non-Circular Cross Sections 244
7.7.3 Multiple-Pipe Systems 252
7.8 Open-Channel Flow. 255
7.8.1 Uniform Flow 259
7.8.2 The Equations of Chézy and Manning 261
7.8.3 Surface Wave Speed and Flow Classification 263
7.8.4 Specific Energy 268
7.8.5 Hydraulic Jump 271
Problems 273

8 One-Dimensional Compressible Flow 287
8.1 Classification 288
8.2 Thermodynamic Properties of Air 289
8.3 Speed of Sound 290
8.4 Subsonic Versus Supersonic Flow 293
8.5 Analysis of a Streamtube 294
8.6 Total Conditions 298
8.7 Normal Shock Waves 300
8.8 Directionality 302
8.9 Lava1 Nozzle 304
Problems 310

9 Turbomachinery 319
9.1 Classification 319
9.2 Conservation of Angular Momentum 321
9.2.1 Derivation 321
9.2.2 Lawn Sprinkler 322
9.3 The Euler Turbomachine Equations 324
9.4 Application to a Centrifugal Pump 328
9.4.1 Velocity Triangles 328
9.4.2 Computing Pump Properties 332
9.4.3 Efficiency 334
9.4.4 Performance Curves 334
9.5 Dimensional Considerations 335
9.5.1 Primary Dimensionless Groupings 335

9.5.2 Specific Speed 337
9.6 Common Turbomachines 338
9.6.1 Pumps and Compressors 338
9.6.2 Reaction and Impulse Turbines 340
Problems 344

10 Vorticity and Viscosity **351**
10.1 The Vortex Force 352
10.2 Helmholtz's Theorem and d'Alembert's Paradox 353
10.3 Boundary Conditions at a Solid Boundary 355
10.4 Viscous Effects and Vorticity Generation 356
10.5 Diffusion of Vorticity 359
10.6 Lift and Drag of Common Objects 361
Problems 366

11 Potential Flow **371**
11.1 Differential Equations of Motion 372
11.2 Mathematical Foundation 372
11.2.1 Cylindrical Coordinates 373
11.2.2 Velocity-Potential Representation 374
11.2.3 Streamfunction Representation 375
11.3 Streamlines and Equipotential Lines 376
11.4 Bernoulli's Equation 378
11.5 Fundamental Solutions 380
11.5.1 Uniform Flow 380
11.5.2 Potential Vortex 381
11.5.3 Source and Sink 383
11.5.4 Doublet 384
11.5.5 Comments on Use of Fundamental Solutions 387
11.6 Flow Past a Cylinder 388
11.6.1 The Basic Solution 388
11.6.2 Force on the Cylinder 391
11.6.3 Adding a Vortex 394
11.6.4 Force Computation Redone 396
11.7 Other Interesting Solutions 401
11.7.1 Accelerating Cylinder 401
11.7.2 Rankine Oval 403
11.7.3 Wedge. 405
11.7.4 Stagnation Point 407
11.7.5 The Method of Images 409
11.8 Airfoil Flow. 413
11.8.1 The Kutta Condition 413
11.8.2 Source and Vortex Sheets 414
11.8.3 Linear Airfoil Theory 417
11.9 Computational Fluid Dynamics 421
11.9.1 Discretization Approximations 422
11.9.2 Relaxation Methods 426
11.9.3 Flow Past a Vertical Plate 427
11.9.4 Solution Convergence and Grid Sensitivity 429

Problems 432

12 Viscous Effects *449*
12.1 Molecular Transport of Momentum 450
12.2 Kinematics of a Fluid Particle 452
12.2.1 Basic Formulation 452
12.2.2 Volume Distortion 454
12.2.3 Angular Distortion and Rotation 455
12.2.4 Strain-Rate Tensor and Vorticity Vector 456
12.2.5 Incompressibility and Irrotationality 458
12.3 The Viscous Stress Tensor 460
12.4 Integral Form of the Momentum Equation 463
12.4.1 Derivation. 463
12.4.2 Control-Volume Example 464
12.5 Navier's Equation 467
12.5.1 Derivation. 467
12.5.2 Symmetry of the Stress Tensor 468
12.5.3 Understanding Surface-Force Balances 469
12.6 Stokes' Postulate 471
12.7 Navier-Stokes Equation 473
12.8 The Vorticity Equation 475
12.8.1 Interaction With Forces on a Fluid Particle 475
12.8.2 Vortex Stretching 476
12.9 Computational Fluid Dynamics. 478
12.9.1 Explicit Time-Marching Methods 478
12.9.2 von Neumann Stability Analysis 479
12.9.3 MacCormack's Method 481
12.9.4 Flow Over a Plate with Uniform Suction 482
Problems 486

13 Navier-Stokes Solutions *497*
13.1 Couette Flow 498
13.2 Channel Flow 503
13.3 Pipe Flow 505
13.4 Stokes' First Problem 511
13.5 Stokes' Second Problem 518
13.6 Stagnation-Point Flow 521
13.7 Computational Fluid Dynamics 528
13.7.1 Implicit Time-Marching Methods 528
13.7.2 Crank-Nicolson Method 529
13.7.3 Thomas' Algorithm 530
13.7.4 Stagnation-Point Flow Revisited 532
Problems 535

14 Boundary Layers *547*
14.1 Importance of Friction 548
14.2 Prandtl's Boundary Layer 551
14.2.1 High Reynolds Number Flow Near a Surface 551
14.2.2 Boundary-Layer Equations 552

14.2.3 Momentum Integral Equation . . . 557
14.2.4 Blasius Solution . . . 563
14.2.5 Effects of Pressure Gradient . . . 565
14.2.6 Boundary-Layer Separation . . . 568
14.3 Turbulence . . . 571
14.3.1 Laminar, Transitional and Turbulent Flow . . . 571
14.3.2 General Properties of Turbulence . . . 576
14.3.3 Reynolds Averaging . . . 579
14.3.4 Reynolds-Averaged Equations . . . 580
14.3.5 Turbulent Boundary-Layer Structure. . . . 582
14.3.6 Prandtl's Mixing-Length Hypothesis . . . 586
14.3.7 Modem Turbulence Theories . . . 588
14.4 Computational Fluid Dynamics . . . 591
14.4.1 Parabolic Marching Methods . . . 591
14.4.2 Stretched Finite-Difference Grids . . . 592
14.4.3 Blottner's Variable-Grid Method . . . 595
14.4.4 Predicting Separation on a Rankine Oval . . . 597
Problems . . . 600

15 Viscous and 2-D Compressible Flow *623*
15.1 The Energy Equation . . . 624
15.1.1 Integral Form . . . 624
15.1.2 Constitutive Relation for the Heat-Flux Vector . . . 625
15.1.3 Differential Form . . . 626
15.1.4 Entropy Generation Revisited . . . 629
15.1.5 Surface Boundary Conditions . . . 629
15.2 Fanno Flow . . . 631
15.3 Rayleigh Flow . . . 639
15.4 Oblique Shock Waves . . . 644
15.5 Prandtl-Meyer Expansion . . . 654
15.6 Compressible Boundary Layers . . . 660
15.7 Computational Fluid Dynamics. . . . 666
15.7.1 Conservative Differencing . . . 667
15.7.2 Numerical Dissipation and Dispersion . . . 668
15.7.3 Propagating Shocks and Expansions . . . 671
Problems . . . 673

A Fluid Properties *687*
A.1 Perfect-Gas Properties . . . 687
A.2 Pressure . . . 687
A.3 Density . . . 688
A.4 Compressibility and Speed of Sound . . . 688
A.5 Viscosity. . . . 689
A.6 Surface Tension . . . 690

B Dimensions and Units 691
B. 1 Independent Dimensions . . . 691
B.2 Common Systems of Units . . . 691
B.2.1 Standard International Units . . . 692
B.2.2 Centimeter-Gram-Second Units . . . 693
B.2.3 British Gravitational Units . . . 694
B.2.4 English Engineering Units . . . 694
B.3 Converting Dimensional Quantities . . . 695

C Compressible Flow Tables 697
C.1 Isentropic Flow and Normal-Shock Relations . . . 697
C.2 Prandtl-Meyer Function and Mach Angle . . . 703
C.3 Fanno Flow . . . 705
C.4 Rayleigh Flow. . . . 708

D Useful Mathematical Theorems 711
D. 1 Mean Value Theorem of Calculus . . . 711
D.2 The Vector Differential Operator ∇ . . . 711
D.3 Divergence Theorem . . . 712
D.4 Gauss' Theorem . . . 713
D.5 Stokes' Theorem . . . 713
D.6 A Useful Operation. . . . 713

E Equations of Motion in Various Coordinate Systems 715
E. 1 Rectangular Cartesian Coordinates . . . 716
E.2 Cylindrical Polar Coordinates . . . 717
E.3 Spherical Coordinates . . . 718
E.4 Rotating Coordinate System . . . 719
E.5 Natural (Streamline) Coordinates . . . 720

F Companion Software 723
El Program Descriptions . . . 723
F.1.1 Program POTFLOW . . . 723
F.l.2 Program SUCTION . . . 724
F.l.3 Program STAGPT . . . 725
F.l.4 Program FALKSKAN . . . 725
F.l.5 Program RANKIN . . . 726
El.6 Program BURGER . . . 727
F.2 Compact Disk Contents . . . 727

G Program EDDYBL 729
G.1 *Overview* . . . 729
G.1.1 Acknowledgments . . . 729
G. 1.2 Required Hardware and Software . . . 729
G.2 Getting Started Quickly. . . . 730
G.3 Installing SETEBL . . . 733
G.3.1 Boot-Console Installation . . . 733
G.3.2 Remote-Terminal Installation . . . 734
G.4 Installing EDDYBL . . . 734
G.5 Running a General Case . . . 734

G.5.1 Preliminary Operations 735
G.5.2 Units Selection 735
G.5.3 Main Parameters 735
G.5.4 Taking a Lunch Break 737
G.5.5 Edge/Wall Conditions 737
G.5.6 Preparing Edge/Wall Condition Data Files 738
G.5.7 Generating Edge/Wall Conditions 739
G.5.8 Initial Profiles 739
G.5.9 Selecting a Turbulence Model 741
G.5.10 Logical Unit Numbers and Plotting Files 741
G.5.11 Running the Boundary-Layer Program 742
G.5.12 Restart Run 743
G.5.13 Gas Properties and Profile Printing 743
G.5.14 Selecting Laminar, Transitional or Turbulent Flow 744
G.6 Additional Technical Information 744
G.7 EDDYBL Output Parameters 744
G.8 Program PLOTEB: Plotting Utility. 746
G.9 Adapting to Other Compilers/Systems 748
G.10 Compile and Link Commands 750
G. 11 Software Package Modules 753

H Plotting Program Details 755
H.1 Plotting Colors 755
H.2 Video Devices. 756
H.3 Hardcopy Devices 757

Answers to Selected Problems 759

Bibliography 769

Index 775
