| Preface | xxi |
| Acknowledgments | xxv |
| Acronyms | xxvii |

Part I GENERALITIES

| | |
|---|----------|
| 1 Introduction | 3 |
| 1.1 The Nature of Computational Science | 3 |
| 1.1.1 How Computational Scientists Do It | 4 |
| 1.2 Aims of This Book | 5 |
| 1.3 Using this Book with the Disk and Web | 6 |
| 2 Computing Software Basics | 9 |
| 2.1 Problem 1: Making Computers Obey | 9 |
| 2.2 Theory: Computer Languages | 9 |
| 2.3 Implementation: Programming Concepts | 11 |
| 2.4 Implementation: Fortran, area.f | 12 |
| 2.5 Implementation: C, area.c | 13 |
| 2.6 Implementation: Shells, Editors, and Programs | 13 |

| | | |
|----------|--|----|
| 2.7 | Theory: Program Design | 14 |
| 2.8 | Method: Structured Programming | 16 |
| 2.9 | Method: Programming Hints | 18 |
| 2.10 | Problem 2: Limited Range of Numbers | 20 |
| 2.11 | Theory: Number Representation | 20 |
| 2.12 | Method: Fixed and Floating | 21 |
| 2.13 | Implementation: Over/Underflows, <code>over.f (.c)</code> | 23 |
| 2.14 | Model: Machine Precision | 23 |
| 2.15 | Implementation: <code>limit.f (.c)</code> | 24 |
| 2.16 | Problem 3: Complex Numbers, Inverse Functions | 25 |
| 2.17 | Theory: Complex Numbers | 25 |
| 2.18 | Implementation: <code>complex.c (.f)</code> | 27 |
| 2.19 | Exploration: Quantum Complex Energies | 28 |
| 2.20 | Problem 4: Summing Series | 28 |
| 2.21 | Method: Numeric | 29 |
| 2.22 | Implementation: Pseudocode | 29 |
| 2.23 | Implementation: Good Algorithm, <code>exp-good.f (.c)</code> | 29 |
| 2.24 | Implementation: Bad Algorithm, <code>exp-bad.f (.c)</code> | 30 |
| 2.25 | Assessment | 30 |
| 3 | Errors and Uncertainties in Computations | 31 |
| 3.1 | Problem: Living with Errors | 31 |
| 3.2 | Theory: Types of Errors | 32 |
| 3.3 | Model: Subtractive Cancellation | 33 |
| 3.4 | Assessment: Cancellation Experiment | 34 |
| 3.5 | Model: Multiplicative Errors | 36 |
| 3.6 | Problem 1: Errors in Spherical Bessel Functions | 37 |
| 3.7 | Method: Numeric Recursion Relations | 38 |
| 3.8 | Implementation: <code>bessel.f (.c)</code> | 40 |
| 3.9 | Assessment | 40 |
| 3.10 | Problem 2: Errors in Algorithms | 40 |
| 3.11 | Model: Errors in Algorithms | 41 |
| 3.11.1 | Total Error | 41 |
| 3.12 | Method: Optimizing with Known Error Behavior | 42 |
| 3.13 | Method: Empirical Error Analysis | 43 |
| 3.14 | Assessment: Experiment | 44 |
| 4 | Integration | 47 |
| 4.1 | Problem: Integrating a Spectrum | 47 |

| | | |
|--------|---|----|
| 4.2 | Model: Quadrature, Summing Boxes | 47 |
| 4.3 | Method: Trapezoid Rule | 50 |
| 4.4 | Method: Simpson's Rule | 51 |
| 4.5 | Assessment: Integration Error, Analytic | 52 |
| 4.6 | Method: Gaussian Quadrature | 55 |
| 4.6.1 | Scaling Integration Points | 56 |
| 4.7 | Implementation: <code>integ.f (.c)</code> | 57 |
| 4.8 | Assessment: Empirical Error Estimate | 58 |
| 4.9 | Assessment: Experimentation | 59 |
| 4.10 | Method: Romberg Extrapolation | 59 |
| 4.10.1 | Other Closed Newton-Cotes Formulas | 60 |

Part II APPLICATIONS

| | | |
|----------|---|----|
| 5 | Data Fitting | 63 |
| 5.1 | Problem: Fitting an Experimental Spectrum | 63 |
| 5.2 | Theory: Curve Fitting | 64 |
| 5.3 | Method: Lagrange Interpolation | 65 |
| 5.3.1 | Example | 66 |
| 5.4 | Implementation: <code>lagrange.f (.c)</code> | 66 |
| 5.5 | Assessment: Interpolating a Resonant Spectrum | 67 |
| 5.6 | Assessment: Exploration | 68 |
| 5.7 | Method: Cubic Splines | 68 |
| 5.7.1 | Cubic Spline Boundary Conditions | 69 |
| 5.7.2 | Exploration: Cubic Spline Quadrature | 70 |
| 5.8 | Implementation: <code>spline.f</code> | 71 |
| 5.9 | Assessment: Spline Fit of Cross Section | 71 |
| 5.10 | Problem: Fitting Exponential Decay | 71 |
| 5.11 | Model: Exponential Decay | 71 |
| 5.12 | Theory: Probability Theory | 73 |
| 5.13 | Method: Least-Squares Fitting | 74 |
| 5.14 | Theory: Goodness of Fit | 76 |
| 5.15 | Implementation: Least-Squares Fits, <code>fit.f (.c)</code> | 77 |
| 5.16 | Assessment: Fitting Exponential Decay | 78 |
| 5.17 | Assessment: Fitting Heat Flow | 79 |
| 5.18 | Implementation: Linear Quadratic Fits | 80 |
| 5.19 | Assessment: Quadratic Fit | 81 |
| 5.20 | Method: Nonlinear Least-Squares Fitting | 81 |

| | |
|--|-----|
| 5.21 Assessment: Nonlinear Fitting | 82 |
| 6 Deterministic Randomness | 83 |
| 6.1 Problem: Deterministic Randomness | 83 |
| 6.2 Theory: Random Sequences | 83 |
| 6.3 Method: Pseudo-Random-Number Generators | 84 |
| 6.4 Assessment: Random Sequences | 86 |
| 6.5 Implementation: Simple and Not <code>random.fl(.c); call.f(.c)</code> | 87 |
| 6.6 Assessment: Randomness and Uniformity | 87 |
| 6.7 Assessment: Tests of Randomness, Uniformity | 88 |
| 6.8 Problem: A Random Walk | 89 |
| 6.9 Model: Random Walk Simulation | 89 |
| 6.10 Method: Numerical Random Walk | 90 |
| 6.11 Implementation: <code>walk.fl(.c)</code> | 91 |
| 6.12 Assessment: Different Random Walkers | 91 |
| 7 Monte Carlo Applications | 93 |
| 7.1 Problem: Radioactive Decay | 93 |
| 7.2 Theory: Spontaneous Decay | 93 |
| 7.3 Model: Discrete Decay | 94 |
| 7.4 Model: Continuous Decay | 95 |
| 7.5 Method: Decay Simulation | 95 |
| 7.6 Implementation: <code>decay.f(.c)</code> | 97 |
| 7.7 Assessment: Decay Visualization | 97 |
| 7.8 Problem: Measuring by Stone Throwing | 97 |
| 7.9 Theory: Integration by Rejection | 97 |
| 7.10 Implementation: Stone Throwing, <code>pond.f(.c)</code> | 98 |
| 7.11 Problem: High-Dimensional Integration | 99 |
| 7.12 Method: Integration by Mean Value | 99 |
| 7.12.1 Multidimensional Monte Carlo | 101 |
| 7.13 Assessment: Error in N-D Integration | 101 |
| 7.14 Implementation: 10-D Integration, <code>int_10d.fl(.c)</code> | 101 |
| 7.15 Problem: Integrate a Rapidly Varying Function@ | 102 |
| 7.16 Method: Variance Reduction@ | 102 |
| 7.17 Method: Importance Sampling@ | 103 |
| 7.18 Implementation: Nonuniform Randomness@ | 103 |
| 7.18.1 Inverse Transform Method | 103 |
| 7.18.2 Uniform Weight Function w | 104 |

| | | |
|----------|---|-----|
| 7.18.3 | Exponential Weight | 105 |
| 7.18.4 | Gaussian (Normal) Distribution | 105 |
| 7.18.5 | Alternate Gaussian Distribution | 106 |
| 7.19 | Method: von Neumann Rejection@ | 107 |
| 7.20 | Assessment@ | 108 |
| 8 | Differentiation | 109 |
| 8.1 | Problem 1: Numerical Limits | 109 |
| 8.2 | Method: Numeric | 109 |
| 8.2.1 | Method: Forward Difference | 109 |
| 8.2.2 | Method: Central Difference | 111 |
| 8.2.3 | Method: Extrapolated Difference | 111 |
| 8.3 | Assessment: Error Analysis | 112 |
| 8.4 | Implementation: Differentiation, diff.f (.c) | 113 |
| 8.5 | Assessment: Error Analysis, Numerical | 113 |
| 8.6 | Problem 2: Second Derivatives | 114 |
| 8.7 | Theory: Newton II | 114 |
| 8.8 | Method: Numerical Second Derivatives | 114 |
| 8.9 | Assessment: Numerical Second Derivatives | 115 |
| 9 | Differential Equations and Oscillations | 117 |
| 9.1 | Problem: A Forced Nonlinear Oscillator | 117 |
| 9.2 | Theory, Physics: Newton's Laws | 117 |
| 9.3 | Model: Nonlinear Oscillator | 118 |
| 9.4 | Theory, Math: Types of Equations | 119 |
| 9.4.1 | Order | 119 |
| 9.4.2 | Ordinary and Partial | 120 |
| 9.4.3 | Linear and Nonlinear | 121 |
| 9.4.4 | Initial and Boundary Conditions | 121 |
| 9.5 | Theory, Math, and Physics: The Dynamical Form for ODEs | 122 |
| 9.5.1 | Second-Order Equation | 122 |
| 9.6 | Implementation: Dynamical Form for Oscillator | 123 |
| 9.7 | Numerical Method: ODE Algorithms | 124 |
| 9.8 | Method (Numerical): Euler's Algorithm | 124 |
| 9.9 | Method (Numerical): Second-Order Runge-Kutta | 126 |
| 9.10 | Method (Numerical): Fourth-Order Runge-Kutta | 127 |
| 9.11 | Implementation: ODE Solver, rk4.f (.c) | 127 |
| 9.12 | Assessment: rk4 and Linear Oscillations | 128 |

| | | |
|-----------|--|-----|
| 9.13 | Assessment: rk4 and Nonlinear Oscillations | 128 |
| 9.14 | Exploration: Energy Conservation | 129 |
| 10 | Quantum Eigenvalues; Zero-Finding and Matching | 131 |
| 10.1 | Problem: Binding A Quantum Particle | 131 |
| 10.2 | Theory: Quantum Waves | 132 |
| 10.3 | Model: Particle in a Box | 133 |
| 10.4 | Solution: Semianalytic | 133 |
| 10.5 | Method: Finding Zero via Bisection Algorithm | 136 |
| 10.6 | Method: Eigenvalues from an ODE Solver | 136 |
| 10.6.1 | Matching | 138 |
| 10.7 | Implementation: ODE Eigenvalues, <code>numerov.c</code> | 139 |
| 10.8 | Assessment: Explorations | 141 |
| 10.9 | Extension: Newton's Rule for Finding Roots | 141 |
| 11 | Anharmonic Oscillations | 143 |
| 11.1 | Problem 1: Perturbed Harmonic Oscillator | 143 |
| 11.2 | Theory: Newton II | 144 |
| 11.3 | Implementation: ODE Solver, <code>rk4.f (.c)</code> | 144 |
| 11.4 | Assessment: Amplitude Dependence of Frequency | 145 |
| 11.5 | Problem 2: Realistic Pendulum | 145 |
| 11.6 | Theory: Newton II for Rotations | 146 |
| 11.7 | Method, Analytic: Elliptic Integrals | 147 |
| 11.8 | Implementation, rk4 for Pendulum | 147 |
| 11.9 | Exploration: Resonance and Beats | 148 |
| 11.10 | Exploration: Phase-Space Plot | 149 |
| 11.11 | Exploration: Damped Oscillator | 150 |
| 12 | Fourier Analysis of Nonlinear Oscillations | 151 |
| 12.1 | Problem 1: Harmonics in Nonlinear Oscillations | 151 |
| 12.2 | Theory: Fourier Analysis | 152 |
| 12.2.1 | Example 1: Sawtooth Function | 154 |
| 12.2.2 | Example 2: Half-Wave Function | 154 |
| 12.3 | Assessment: Summation of Fourier Series | 155 |
| 12.4 | Theory: Fourier Transforms | 156 |
| 12.5 | Method: Discrete Fourier Transform | 157 |
| 12.6 | Method: DFT for Fourier Series | 161 |
| 12.7 | Implementation: <code>fourier.f (.c)</code> , <code>invfour.c</code> | 162 |
| 12.8 | Assessment: Simple Analytic Input | 162 |

| | |
|---|-----|
| 12.9 Assessment: Highly Nonlinear Oscillator | 163 |
| 12.10 Assessment: Nonlinearly Perturbed Oscillator | 163 |
| 12.11 Exploration: DFT of Nonperiodic Functions | 163 |
| 12.12 Exploration: Processing Noisy Signals | 164 |
| 12.13 Model: Autocorrelation Function | 164 |
| 12.14 Assessment: DFT and Autocorrelation Function | 165 |
| 12.15 Problem 2: Model Dependence of Data Analysis  | 166 |
| 12.16 Method: Model-Independent Data Analysis | 167 |
| 12.17 Assessment | 168 |
| | |
| 13 Unusual Dynamics of Nonlinear Systems | 171 |
| 13.1 Problem: Variability of Bug Populations | 171 |
| 13.2 Theory: Nonlinear Dynamics | 171 |
| 13.3 Model: Nonlinear Growth, The Logistic Map | 172 |
| 13.3.1 The Logistic Map | 173 |
| 13.4 Theory: Properties of Nonlinear Maps | 174 |
| 13.4.1 Fixed Points | 174 |
| 13.4.2 Period Doubling, Attractors | 175 |
| 13.5 Implementation: Explicit Mapping | 176 |
| 13.6 Assessment: Bifurcation Diagram | 177 |
| 13.7 Implementation: bugs.f (.c) | 178 |
| 13.8 Exploration: Random Numbers via Logistic Map | 179 |
| 13.9 Exploration: Feigenbaum Constants | 179 |
| 13.10 Exploration: Other Maps | 180 |
| | |
| 14 Differential Chaos in Phase Space | 181 |
| 14.1 Problem: A Pendulum Becomes Chaotic | 181 |
| 14.2 Theory and Model: The Chaotic Pendulum | 182 |
| 14.3 Theory: Limit Cycles and Mode Locking | 183 |
| 14.4 Implementation 1: Solve ODE, rk4.f (.c) | 184 |
| 14.5 Visualization: Phase-Space Orbits | 184 |
| 14.6 Implementation 2: Free Oscillations | 187 |
| 14.7 Theory: Motion in Phase Space | 188 |
| 14.8 Implementation 3: Chaotic Pendulum | 188 |
| 14.9 Assessment: Chaotic Structure in Phase Space | 191 |
| 14.10 Assessment: Fourier Analysis | 191 |
| 14.11 Exploration: Pendulum with Vibrating Pivot | 192 |
| 14.11.1 Implementation: Bifurcation Diagram | 192 |
| 14.12 Further Explorations | 193 |

Part III APPLICATIONS
(HIGH PERFORMANCE COMPUTING)

| | |
|---|-----|
| 15 Matrix Computing and Subroutine Libraries | 197 |
| 15.1 Problem 1: Many Simultaneous Linear Equations | 197 |
| 15.2 Formulation: Linear into Matrix Equation | 198 |
| 15.3 Problem 2: Simple but Unsolvable Statics | 198 |
| 15.4 Theory: Statics | 199 |
| 15.5 Formulation: Nonlinear Simultaneous Equations | 199 |
| 15.6 Theory: Matrix Problems | 200 |
| 15.6.1 Classes of Matrix Problems | 201 |
| 15.7 Method: Matrix Computing | 203 |
| 15.8 Implementation: Scientific Libraries, WWW | 207 |
| 15.9 Implementation: Determining Availability | 209 |
| 15.9.1 Determining Contents of a Library | 210 |
| 15.9.2 Determining the Needed Routine | 210 |
| 15.9.3 Calling <code>LAPACK</code> from Fortran, <code>lineq.c</code> | 211 |
| 15.9.4 Calling <code>LAPACK</code> from C | 212 |
| 15.9.5 Calling <code>LAPACK Fortran</code> from C | 213 |
| 15.9.6 C Compiling Calling Fortran | 214 |
| 15.10 Extension: More Netlib Libraries | 214 |
| 15.10.1 SLATEC's Common Math Library | 215 |
| 15.11 Exercises: Testing Matrix Calls | 216 |
| 15.12 Implementation: LAPACK Short Contents | 217 |
| 15.13 Implementation: Netlib Short Contents | 221 |
| 15.14 Implementation: SLATEC Short Contents | 222 |
| | |
| 16 Bound States in Momentum Space | 231 |
| 16.1 Problem: Bound States in Nonlocal Potentials | 231 |
| 16.2 Theory: k-Space Schrödinger Equation | 232 |
| 16.3 Method: Reducing Integral to Linear Equations | 233 |
| 16.4 Model: The Delta-Shell Potential | 235 |
| 16.5 Implementation: Binding Energies, <code>bound-c (.f)</code> | 236 |
| 16.6 Exploration: Wave Function | 237 |
| | |
| 17 Quantum Scattering via Integral Equations@ | 239 |
| 17.1 Problem: Quantum Scattering in k Space | 239 |
| 17.2 Theory: Lippmann-Schwinger Equation | 240 |
| 17.3 Theory (Mathematics): Singular Integrals | 241 |

| | |
|--|-----|
| 17.3.1 Numerical Principal Values | 242 |
| 17.4 Method: Converting Integral to Matrix Equations | 243 |
| 17.4.1 Solution via Inversion or Elimination | 245 |
| 17.4.2 Solving <i>iε</i> Integral Equations \odot | 245 |
| 17.5 Implementation: Delta-Shell Potential, scatt.f | 246 |
| 17.6 Exploration: Scattering Wave Function | 248 |
| 18 Computing Hardware Basics: Memory and CPU | 249 |
| 18.1 Problem: Speeding Up Your Program | 249 |
| 18.2 Theory: High-Performance Components | 250 |
| 18.2.1 Memory Hierarchy | 250 |
| 18.2.2 The Central Processing Unit | 253 |
| 18.2.3 CPU Design: RISC | 254 |
| 18.2.4 CPU Design: Vector Processing | 254 |
| 18.2.5 Virtual Memory | 255 |
| 18.3 Method: Programming for Virtual Memory | 256 |
| 18.4 Implementation: Good, Bad Virtual Memory Use | 257 |
| 18.5 Method: Programming for Data Cache | 258 |
| 18.6 Implementation 1: Cache Misses | 260 |
| 18.7 Implementation 2: Cache Flow | 260 |
| 18.8 Implementation 3: Large Matrix Multiplication | 261 |
| 19 High-Performance Computing: Profiling and Tuning | 263 |
| 19.1 Problem: Effect of Hardware on Performance | 263 |
| 19.2 Method: Tabulating Speedups | 263 |
| 19.3 Implementation 1: Baseline Program, tune.f | 264 |
| 19.4 Method: Profiling | 265 |
| 19.5 Implementation 2: Basic Optimization, tune1.f | 266 |
| 19.6 Implementation 2: Vector Tuning, tune2.f | 269 |
| 19.7 Implementation 3: Vector Code on RISC, tune3.f | 270 |
| 19.8 Implementation 4: Superscalar Tuning, tune4.f | 271 |
| 19.9 Assessment | 273 |
| 20 Parallel Computing and PVM | 275 |
| 20.1 Problem: Speeding Up Your Program | 275 |
| 20.2 Theory: Parallel Semantics | 276 |
| 20.2.1 Parallel Instruction and Data Streams | 276 |
| 20.2.2 Granularity | 277 |
| 20.2.3 Parallel Performance | 277 |

| | | |
|-----------|---|-----|
| 20.3 | Method: Multitasking Programming | 278 |
| 20.3.1 | Method: Multitask Organization | 278 |
| 20.4 | Method: Distributed Memory Programming | 279 |
| 20.5 | Implementation: PVM Bug Populations, WWW | 280 |
| 20.5.1 | The Plan | 280 |
| 21 | Object-Oriented Programming: Kinematics ◉ | 283 |
| 21.1 | Problem: Superposition of Motions | 283 |
| 21.2 | Theory: Object-Oriented Programming | 284 |
| 21.2.1 | OOP Fundamentals | 284 |
| 21.3 | Theory: Newton’s Laws, Equation of Motion | 285 |
| 21.4 | OOP Method: Class Structure | 285 |
| 21.5 | Implementation: Uniform 1 -D Motion, unim1d.cpp | 286 |
| 21.5.1 | Uniform Motion in I-D, Class Um1D | 287 |
| 21.5.2 | Implementation: Uniform Motion in 2-D, Child Um2D, unimot2d.cpp | 288 |
| 21.5.3 | Class Um2D: Uniform Motion in 2-D | 289 |
| 21.5.4 | Implementation: Projectile Motion, Child Accm2D, accm2d.cpp | 291 |
| 21.5.5 | Accelerated Motion in Two Directions | 293 |
| 21.6 | Assessment: Exploration, shms.cpp | 295 |
| 22 | Thermodynamic Simulations: The Ising Model | 297 |
| 22.1 | Problem: Hot Magnets | 297 |
| 22.2 | Theory: Statistical Mechanics | 297 |
| 22.3 | Model: An Ising Chain | 299 |
| 22.4 | Solution, Analytic | 301 |
| 22.5 | Solution, Numerical: The Metropolis Algorithm | 301 |
| 22.6 | Implementation: ising.f (.c) | 304 |
| 22.7 | Assessment: Approach to Thermal Equilibrium | 305 |
| 22.8 | Assessment: Thermodynamic Properties | 305 |
| 22.9 | Exploration: Beyond Nearest Neighbors | 307 |
| 22.10 | Exploration: 2-D and 3-D Ising Models | 307 |
| 23 | Functional Integration on Quantum Paths @ | 309 |
| 23.1 | Problem: Relate Quantum to Classical Trajectory | 309 |
| 23.2 | Theory: Feynman’s Spacetime Propagation | 309 |
| 23.3 | Analytic Method: Bound-State Wave Function | 312 |

| | |
|---|-----|
| 23.4 Numerical Method: Lattice Path Integration | 314 |
| 23.5 Method: Lattice Computation of Propagators | 316 |
| 23.6 Implementation: <code>qmc.f (.c)</code> | 319 |
| 23.7 Assessment and Exploration | 321 |

| | |
|---|-----|
| 24 Fractals | 323 |
| 24.1 Problem: Fractals | 323 |
| 24.2 Theory: Fractional Dimension | 324 |
| 24.3 Problem 1: The Sierpinski Gasket | 324 |
| 24.4 Implementation: <code>sierpin.c</code> | 325 |
| 24.5 Assessment: Determining a Fractal Dimension | 326 |
| 24.6 Problem 2: How to Grow Beautiful Plants | 327 |
| 24.7 Theory: Self-Affine Connections | 328 |
| 24.8 Implementation: Bamsley's Fern, <code>fern.d</code> | 329 |
| 24.9 Exploration: Self-Affinity in Trees | 329 |
| 24.10 Implementation: Nice Trees, <code>tree.c</code> | 330 |
| 24.11 Problem 3: Ballistic Deposition | 330 |
| 24.12 Method: Random Depositions | 331 |
| 24.13 Implementation: Ballistic Deposition, <code>film.c</code> | 333 |
| 24.14 Problem 4: Length of the Coastline of Britain | 333 |
| 24.15 Model: The Coast as a Fractal | 333 |
| 24.16 Method: Box Counting | 334 |
| 24.17 Problem 5: Correlated Growth, Forests and Films | 335 |
| 24.18 Method: Correlated Ballistic Deposition | 336 |
| 24.19 Implementation: <code>column.d</code> | 337 |
| 24.20 Problem 6: A Globular Cluster | 337 |
| 24.21 Model: Diffusion-Limited Aggregation | 337 |
| 24.22 Method: DLA Simulation | 338 |
| 24.23 Implementation: <code>dlad</code> | 339 |
| 24.24 Assessment: Fractal Analysis of DLA Graph | 339 |
| 24.25 Problem 7: Fractals in Bifurcation Graph | 340 |

Part IV PARTIAL DIFFERENTIAL EQUATIONS

| | |
|--|-----|
| 25 Electrostatic Potentials | 343 |
| 25.1 Introduction: Types of PDEs | 343 |
| 25.2 Problem: Determining an Electrostatic Potential | 344 |
| 25.3 Theory: Laplace's Equation (Elliptic PDE) | 344 |

| | |
|--|------------|
| 25.4 Method, Numerical: Finite Difference | 345 |
| 25.5 Method, Analytic: Polynomial Expansions | 347 |
| 25.6 Implementation: Solution on Lattice, <code>laplace.f</code> | 350 |
| 25.7 Assessment and Visualization | 350 |
| 25.8 Exploration | 351 |
| 25.9 Exploration: Parallel-Plate Capacitor | 351 |
| 25.10 Exploration: Field Between Square Conductors | 353 |
| 26 Heat Flow | 355 |
| 26.1 Problem: Heat Flow in a Metal Bar | 355 |
| 26.2 Model: The Heat (Parabolic) PDE | 355 |
| 26.3 Method, Analytic: Polynomial Expansions | 356 |
| 26.4 Method, Numerical: Finite Difference | 358 |
| 26.5 Analytic Assessment: Algorithm | 358 |
| 26.6 Implementation: Heat Equation, <code>eqheat.f (.c)</code> | 360 |
| 26.7 Assessment: Continuity, Numeric vs Analytic | 361 |
| 26.8 Assessment: Visualization | 361 |
| 26.9 Exploration | 362 |
| 27 Waves on a String | 365 |
| 27.1 Problem: A Vibrating String | 365 |
| 27.2 Model: The Wave Equation (Hyperbolic PDE) | 365 |
| 27.3 Method, Numerical: Time Stepping | 367 |
| 27.4 Method, Analytic: Normal Modes | 368 |
| 27.5 Implementation: <code>eqstring.f (.c)</code> | 370 |
| 27.6 Assessment: Visualization | 371 |
| 27.7 Exploration | 371 |
| 28 Solitons, the KdeV Equation ☉ | 379 |
| 28.1 Introduction | 379 |
| 28.2 Problem: Solitons | 380 |
| 28.3 Theory: The Korteweg-de Vries Equation | 381 |
| 28.4 Method, Analytic: Traveling Waves | 384 |
| 28.5 Method, Numeric: Finite Difference | 384 |
| 28.6 Implementation: KdeV Solitons , <code>soliton.fl (.c)</code> | 386 |
| 28.7 Assessment: Visualization | 387 |
| 28.8 Exploration: Two Solitons Crossing | 387 |
| 28.9 Exploration: Phase-Space Behavior | 388 |
| 28.10 Exploration: Shock Waves | 388 |

| | |
|---|-----|
| 29 Sine–Gordon Solitons ☺ | 389 |
| 29.1 Problem 1: Particles from Field Equations | 389 |
| 29.2 Theory: Circular Ring Solitons (Pulsions) | 389 |
| 29.3 Problem 2: Dispersionless Dispersive Chains | 390 |
| 29.4 Theory: Coupled Pendula | 390 |
| 29.4.1 Dispersion in Linear Chain | 392 |
| 29.4.2 Continuum Limit, the SGE | 393 |
| 29.5 Solution: Analytic | 394 |
| 29.6 Solution: Numeric | 394 |
| 29.7 Implementation: 2-D Solitons, <code>twodsolf (.c)</code> | 397 |
| 29.8 Visualization | 398 |
| | |
| 30 Confined Electronic Wave Packets ☺ | 399 |
| 30.1 Problem: A Confined Electron | 399 |
| 30.2 Model: Time-Dependent Schrödinger Equation | 399 |
| 30.3 Method, Numeric: Finite Difference | 401 |
| 30.4 Implementation: Wave Packet in Well, <code>sqwell.f</code> | 403 |
| 30.5 Assessment: Visualization, and Animation | 403 |
| 30.6 Exploration: 1 -D Harmonic Oscillator | 404 |
| 30.7 Implementation: <code>harmos.f</code> | 404 |
| 30.8 Problem: Two-Dimensional Confinement | 404 |
| 30.9 Method: Numerical | 406 |
| 30.10 Exploration: 2-D Harmonic Oscillator | 407 |
| 30.11 Exploration: Single-Slit Diffraction, <code>slit.f</code> | 408 |
| | |
