|--|----------|
| 1 INTRODUCTION | 1 |
| 1.1 The scope of electrochemistry | 1 |
| 1.2 The nature of electrode reactions | 1 |
| 1.3 Thermodynamics and kinetics | 2 |
| 1.4 Methods for studying electrode reactions | 5 |
| 1.5 Applications of electrochemistry | 5 |
| 1.6 Structure of the book | 6 |
| 1.7 Electrochemical literature | 7 |

PART I Principles

| | |
|---|-----------|
| 2 ELECTROCHEMICAL CELLS: THERMODYNAMIC PROPERTIES AND ELECTRODE POTENTIALS | 13 |
| 2.1 Introduction | 13 |
| 2.2 The cell potential of an electrochemical cell | 14 |
| 2.3 Calculation of cell potential: activities or concentrations? | 16 |
| 2.4 Calculation of cell potential: electrochemical potential | 18 |
| 2.5 Galvanic and electrolytic cells | 20 |
| 2.6 Electrode classification | 21 |
| 2.7 Reference electrodes | 22 |
| 2.8 Movement of ions in solution: diffusion and migration | 25 |
| 2.9 Conductivity and mobility | 26 |
| 2.10 Liquid junction potentials | 32 |
| 2.11 Liquid junction potentials, ion-selective electrodes, and biomembranes | 33 |
| 2.12 Electrode potentials and oxidation state diagrams | 34 |
| References | 38 |

| | |
|---|---------------|
| 3 THE INTERFACIAL REGION | 39 |
| 3.1 Introduction | 39 |
| 3.2 The electrolyte double layer: surface tension, charge density, and capacity | 39 |
| 3.3 Double layer models | 44 |
| the first models: Helmholtz , Gouy-Chapman, Stern, and Grahame | 45 |
| Bockris, Devanathan, and Müller model | 51 |
| ‘chemical’ models | 52 |
| 3.4 Specific adsorption | 54 |
| 3.5 The solid metallic electrode: some remarks | 56 |
| 3.6 The semiconductor electrode: the space-charge region | 58 |
| 3.7 Electrokinetic phenomena and colloids: the zeta potential | 64 |
| electrophoresis | 66 |
| sedimentation potential | 67 |
| electroosmosis | 67 |
| streaming potential | 68 |
| limitations in the calculation of the zeta potential | 68 |
| References | 68 |
| 4 FUNDAMENTALS OF KINETICS AND MECHANISM OF ELECTRODE REACTIONS | 70 |
| 4.1 Introduction | 70 |
| 4.2 The mechanism of electron transfer at an electrode | 70 |
| 4.3 The mechanism of electron transfer in homogeneous solution | 71 |
| 4.4 An expression for the rate of electrode reactions | 72 |
| 4.5 The relation between current and reaction rate: the exchange current | 76 |
| 4.6 Microscopic interpretation of electron transfer | 77 |
| References | 81 |
| 5 MASS TRANSPORT | 82 |
| 5.1 Introduction | 82 |
| 5.2 Diffusion control | 83 |
| 5.3 Diffusion-limited current: planar and spherical electrodes. | 85 |
| 5.4 Constant current: planar electrodes | 90 |
| 5.5 Microelectrodes | 92 |
| 5.6 Diffusion layer | 94 |

| | | |
|-----|---|-----|
| 5.7 | Convection and diffusion: hydrodynamic systems . . . | 95 |
| 5.8 | Hydrodynamic systems: some useful parameters | 97 |
| 5.9 | An example of a convective-diffusion system: the rotating disc electrode | 98 |
| | References | 102 |

6 KINETICS AND TRANSPORT IN ELECTRODE REACTIONS 103

| | | |
|------|--|-----|
| 6.1 | Introduction | 103 |
| 6.2 | The global electrode process: kinetics and transport . . | 103 |
| 6.3 | Reversible reactions | 106 |
| 6.4 | Irreversible reactions | 109 |
| 6.5 | The general case. | 111 |
| 6.6 | The Tafel law | 113 |
| 6.7 | The Tafel law corrected for transport | 115 |
| 6.8 | Kinetic treatment based on exchange current | 115 |
| 6.9 | The effect of the electrolyte double layer on electrode kinetics. | 116 |
| 6.10 | Electrode processes involving multiple electron transfer | 119 |
| 6.11 | Electrode processes involving coupled homogeneous reactions | 122 |
| | References | 126 |

PART II Methods

7 ELECTROCHEMICAL EXPERIMENTS. . . . 129

| | | |
|-----|---|-----|
| 7.1 | Introduction | 129 |
| 7.2 | Electrode materials for voltammetry | 129 |
| | metals | 130 |
| | carbon | 130 |
| | other solid materials | 133 |
| | mercury | 133 |
| 7.3 | The working electrode: preparation and cleaning . . . | 134 |
| 7.4 | The cell: measurements at equilibrium | 136 |
| 7.5 | The cell: measurements away from equilibrium | 137 |
| | electrodes. | 137 |
| | supporting electrolyte | 138 |
| | removal of oxygen | 140 |
| 7.6 | Calibration of electrodes and cells | 142 |
| 7.7 | Instrumentation: general | 142 |

| | | |
|----------|---|------------|
| 7.8 | Analogue instrumentation | 143 |
| | potentiostat | 146 |
| | galvanostat | 147 |
| | compensation of cell solution resistance | 148 |
| 7.9 | Digital instrumentation | 148 |
| | References | 149 |
| 8 | HYDRODYNAMIC ELECTRODES | 151 |
| 8.1 | Introduction | 151 |
| 8.2 | Limiting currents at hydrodynamic electrodes | 155 |
| 8.3 | A special electrode: the dropping mercury electrode | 157 |
| 8.4 | Hydrodynamic electrodes in the study of electrode processes | 163 |
| | reversible reaction | 163 |
| | the general case | 164 |
| 8.5 | Double hydrodynamic electrodes | 165 |
| 8.6 | Multiple electron transfer: the use of the RRDE | 167 |
| | consecutive reactions | 168 |
| | parallel reactions | 168 |
| | consecutive and parallel reactions | 169 |
| 8.7 | Hydrodynamic electrodes in the investigation of coupled homogeneous reactions | 169 |
| 8.8 | Hydrodynamic electrodes and non-stationary techniques | 171 |
| | References | 172 |
| 9 | CYCLIC VOLTAMMETRY AND LINEAR SWEEP TECHNIQUES. | 174 |
| 9.1 | Introduction | 174 |
| 9.2 | Experimental basis | 175 |
| 9.3 | Cyclic voltammetry at planar electrodes | 176 |
| | reversible system | 177 |
| | irreversible system | 181 |
| | quasi-reversible system | 183 |
| | adsorbed species | 185 |
| 9.4 | Spherical electrodes | 187 |
| 9.5 | Microelectrodes | 188 |
| 9.6 | Systems containing more than one component | 188 |
| 9.7 | Systems involving coupled homogeneous reactions | 189 |
| 9.8 | Convolution linear sweep voltammetry | 191 |
| 9.9 | Linear potential sweep with hydrodynamic electrodes | 193 |
| 9.10 | Linear potential sweep in thin-layer cells | 194 |
| | References | 197 |

| | |
|---|-----|
| 10 STEP AND PULSE TECHNIQUES. | 199 |
| 10.1 Introduction | 199 |
| 10.2 Potential step: chronoamperometry | 200 |
| reversible system | 202 |
| quasi-reversible and irreversible systems | 203 |
| more complex mechanisms | 205 |
| 10.3 Double potential step | 205 |
| 10.4 Chronocoulometry | 206 |
| 10.5 Current step: chronopotentiometry | 208 |
| reversible system | 209 |
| quasi-reversible and irreversible systems | 211 |
| 10.6 Double current step | 212 |
| 10.7 Methods using derivatives of chronopotentiograms | 213 |
| 10.8 Coulostatic pulses | 214 |
| 10.9 Pulse voltammetry | 214 |
| fast polarography | 215 |
| normal pulse voltammetry (NPV) | 216 |
| differential pulse voltammetry (DPV) | 217 |
| square wave voltammetry (SWV) | 219 |
| other pulse techniques | 221 |
| applications of pulse techniques | 222 |
| References | 222 |
| 11 IMPEDANCE METHODS | 224 |
| 11.1 Introduction | 224 |
| 11.2 Detection and measurement of impedance | 225 |
| a.c. bridges | 225 |
| phase-sensitive detectors and transfer function analysers | 227 |
| direct methods | 228 |
| 11.3 Equivalent circuit of an electrochemical cell | 229 |
| 11.4 The faradaic impedance for a simple electrode process | 230 |
| 11.5 The faradaic impedance, Z_f, and the total impedance: how to calculate Z_f from experimental measurements | 232 |
| 11.6 Impedance plots in the complex plane | 233 |
| 11.7 Admittance and its use | 236 |
| 11.8 A.c. voltammetry | 238 |
| 11.9 Second-order effects | 240 |
| higher harmonics | 240 |
| other second-order methods | 241 |
| faradaic rectification | 242 |
| demodulation | 242 |

| | | |
|-------|---|-----|
| 11.10 | More complex systems, porous electrodes, and fractals | 244 |
| 11.11 | Hydrodynamic electrodes and impedance | 248 |
| 11.12 | Transforms and impedance | 249 |
| | References | 251 |

12 NON-ELECTROCHEMICAL PROBES OF ELECTRODES AND ELECTRODE PROCESSES

| | | |
|------|--|-----|
| | | 253 |
| 12.1 | Introduction | 253 |
| 12.2 | In <i>situ</i> spectroscopic techniques | 254 |
| | transmission. | 254 |
| | reflectance, electroreflectance and ellipsometry | 255 |
| | internal reflection | 258 |
| | Raman spectroscopy | 259 |
| | electron spin resonance (ESR) spectroscopy | 260 |
| | X-ray absorption spectroscopy | 261 |
| | second harmonic generation (SHG) | 263 |
| 12.3 | <i>Ex situ</i> spectroscopic techniques | 263 |
| | photoelectron spectroscopy (XPS) | 263 |
| | Auger electron spectroscopy (AES) | 264 |
| | electron energy loss spectroscopy (EELS) | 266 |
| | electrochemical mass spectrometry (ECMS) and secondary ion mass spectrometry (SIMS) | 266 |
| | low-energy and reflection high-energy electron diffraction (LEED and RHEED) | 267 |
| 12.4 | In <i>situ</i> microscopic techniques | 268 |
| | scanning tunnelling microscopy (STM) | 269 |
| | atomic force microscopy (AFM) | 270 |
| | scanning electrochemical microscopy (SECM) | 272 |
| | scanning ion conductance microscopy (SICM) | 273 |
| 12.5 | <i>Ex situ</i> microscopic techniques: electron microscopy | 273 |
| 12.6 | Other <i>in situ</i> techniques | 276 |
| | measurement of mass change: the quartz crystal microbalance (QCM) | 276 |
| | measurement of absorbed radiation: thermal changes | 277 |
| 12.7 | Photoelectrochemistry | 278 |
| 12.8 | Electrochemiluminescence | 282 |
| | References | 282 |

PART III Applications

| | | |
|------|---------------------------------|-----|
| 13 | POTENTIOMETRIC SENSORS. | 289 |
| 13.1 | Introduction | 289 |

| | | |
|-------|---|------------|
| 13.2 | Potentiometric titrations | 290 |
| 13.3 | Functioning of ion-selective electrodes | 294 |
| 13.4 | Glass electrodes and pH sensors | 295 |
| 13.5 | Electrodes with solid state membranes | 297 |
| 13.6 | Ion-exchange membrane and neutral carrier membrane electrodes | 301 |
| 13.7 | Sensors selective to dissolved gases | 303 |
| 13.8 | Enzyme-selective electrodes | 303 |
| 13.9 | Some practical aspects | 304 |
| 13.10 | Recent developments: miniaturization | 305 |
| | ISFETs | 305 |
| | coated wire electrodes | 306 |
| | hybrid sensors | 307 |
| 13.11 | Potentiometric sensors in flow systems | 307 |
| 13.12 | Electroanalysis with potentiometric sensors | 308 |
| | References | 309 |
| 14 | AMPEROMETRIC AND VOLTAMMETRIC SENSORS | 310 |
| 14.1 | Introduction | 310 |
| 14.2 | Amperometric titrations | 311 |
| | simple amperometric titrations | 311 |
| | biamperometric titrations | 312 |
| | amperometric titrations with double hydrodynamic electrodes | 313 |
| 14.3 | Membrane and membrane-covered electrodes | 314 |
| 14.4 | Modified electrodes | 316 |
| 14.5 | Increase of sensitivity: pre-concentration techniques | 318 |
| 14.6 | Amperometric and voltammetric electroanalysis | 322 |
| | References | 324 |
| 15 | ELECTROCHEMISTRY IN INDUSTRY | 326 |
| 15.1 | Introduction | 326 |
| 15.2 | Electrolysis: fundamental considerations | 327 |
| 15.3 | Electrochemical reactors | 328 |
| 15.4 | Porous and packed-bed electrodes | 331 |
| 15.5 | Examples of industrial electrolysis and electrosynthesis | 332 |
| | the chlor-alkali industry | 332 |
| | metal extraction: aluminium | 336 |
| | water electrolysis | 338 |
| | organic electrosynthesis: the Monsanto process | 339 |
| 15.6 | Electrodeposition and metal finishing | 341 |
| 15.7 | Metal processing | 345 |

| | |
|---|------------|
| 15.8 Batteries | 346 |
| 15.9 Fuel cells | 349 |
| 15.10 Electrochemistry in water and effluent treatment | 350 |
| References | 351 |
| 16 CORROSION. | 353 |
| 16.1 Introduction | 353 |
| 16.2 Fundamentals | 353 |
| thermodynamic aspects | 354 |
| kinetic aspects | 354 |
| 16.3 Types of metallic corrosion | 361 |
| 16.4 Electrochemical methods of avoiding corrosion | 363 |
| electrochemically produced protective barriers | 364 |
| sacrificial anodes. | 364 |
| methods of impressed current/potential | 365 |
| corrosion inhibitors | 365 |
| References | 366 |
| 17 BIOELECTROCHEMISTRY. | 367 |
| 17.1 Introduction | 367 |
| 17.2 The electrochemical interface between biomolecules: cellular membranes, transmembrane potentials, bilayer lipid membranes, electroporation | 368 |
| 17.3 Nerve impulse and cardiovascular electrochemistry | 373 |
| the nerve impulse | 374 |
| cardiovascular problems | 376 |
| 17.4 Oxidative phosphorylation | 378 |
| 17.5 Bioenergetics | 379 |
| 17.6 Bioelectrocatalysis | 381 |
| 17.7 Bioelectroanalysis | 387 |
| 17.8 Future perspectives | 391 |
| References | 391 |

Appendices

| | |
|--|------------|
| AI USEFUL MATHEMATICAL RELATIONS. | 395 |
| AI.1 The Laplace transform | 395 |
| introduction | 395 |
| the transform | 395 |
| important properties | 397 |
| AI.2 The Fourier transform | 398 |

A1.3 Other useful functions and mathematical expressions . 399
 the Airy function 399
 the gamma function 399
 the error function 400
 Taylor and Maclaurin series 401
 hyperbolic functions 403
 Reference 404

A2 PRINCIPLES OF A.C. CIRCUITS 405

A2.1 Introduction 405
 A2.2 Resistance 406
 A2.3 Capacitance 406
 A2.4 Representation in the complex plane 406
 A2.5 Resistance and capacitance in series 407
 A2.6 Resistance and capacitance in parallel 408
 A2.7 Impedances in series and in parallel 410
 A2.8 Admittance 410
 A2.9 The Kramers-Kronig relations 410
 References 411

A3 DIGITAL SIMULATION 412

A3.1 Introduction 412
 A3.2 Simulation models 412
 A3.3 Implicit methods 414
