

Contents

Preface	xvii
Preface to First Edition	xix
Author's Notes	xxiii

Chapter 1

Introduction

1. Fluid Mechanics	1
2. Units of Measurement	2
3. Solids, Liquids, and Gases	3
4. Continuum Hypothesis	4
5. Transport Phenomena	5
6. Surface Tension	8
7. Fluid Statics	9
8.	12
9. Perfect Gas	16
10. Static Equilibrium of a Compressible Medium	17
Exercises	22
Literature Cited	23
Supplemental Reading	23

Chapter 2

Cartesian Tensors

1. Scalars and Vectors	24
2. Rotation of Axes: Formal Definition of a Vector	25

3.	Multiplication of Matrices	28
4.	Second-Order Tensor	29
5.	Contraction and Multiplication	31
6.	Force on a Surface	32
7.	Kronecker Delta and Alternating Tensor	35
8.	Dot Product	36
9.	Cross Product	36
10.	Operator ∇ : Gradient, Divergence, and Curl	37
11.	Symmetric and Antisymmetric Tensors	38
12.	Eigenvalues and Eigenvectors of a Symmetric Tensor	40
13.	Gauss' Theorem	42
14.	Stokes' Theorem	45
15.	Comma Notation	46
16.	Boldface versus Indicjal Notation	47
	Exercises	47
	Literature Cited	49
	Supplemental Reading	49

Chapter 3

Kinematics

1.	Introduction	50
2.	Lagrangian and Eulerian Specifications	51
3.	Material Derivative	52
4.	Streamline, Path Line, and Streak Line	53
5.	Reference Frame and Streamline Pattern	56
6.	Linear Strain Rate	56
7.	Shear Strain Rate	58
8.	Vorticity and Circulation	58
9.	Relative Motion near a Point: Principal Axes	60
10.	Kinematic Considerations of Parallel Shear Flows	63
11.	Kinematic Considerations of Vortex Flows	65
12.	One-, Two-, and Three-Dimensional Flows	68
13.	The Streamfunction	69
14.	Polar Coordinates	72
	Exercises	73
	Supplemental Reading	75

Chapter 4**Conservation Laws**

1. Introduction	76
2. Time Derivatives of Volume Integrals	77
3. Conservation of Mass	79
4. Streamfunctions: Revisited and Generalized	81
5. Origin of Forces in Fluid	82
6. Stress at a Point	84
7. Conservation of Momentum	86
8. Momentum Principle for a Fixed Volume	88
9. Angular Momentum Principle for a Fixed Volume	92
10. Constitutive Equation for Newtonian Fluid	94
11. Navier-Stokes Equation	97
12. Rotating Frame	99
13. Mechanical Energy Equation	104
14. First Law of Thermodynamics: Thermal Energy Equation	108
15. Second Law of Thermodynamics: Entropy Production	109
16. Bernoulli Equation	110
17. Applications of Bernoulli's Equation	114
18. Boussinesq Approximation	117
19. Boundary Conditions	121
Exercises	122
Literature Cited	124
Supplemental Reading	124

Chapter 5**Vorticity Dynamics**

1. Introduction	125
2. Vortex Lines and Vortex Tubes	126
3. Role of Viscosity in Rotational and Irrotational Vortices	126
4. Kelvin's Circulation Theorem	130
5. Vorticity Equation in a Nonrotating Frame	134
6. Vorticity Equation in a Rotating Frame	136
7. Interaction of Vortices	141
8. Vortex Sheet	144
Exercises	145

Literature Cited	146
Supplemental Reading	147

Chapter 6

Irrotational Flow

1. Relevance of Irrotational Flow Theory	148
2. Velocity Potential: Laplace Equation	150
3. Application of Complex Variables	152
4. Flow at a Wall Angle. ↓	154
5. Sources and Sinks	156
6. Irrotational Vortex	157
7. Doublet	157
8. Flow past a Half-Body	159
9. Flow past a Circular Cylinder without Circulation.	160
10. Flow past a Circular Cylinder with Circulation.	163
11. Forces on a Two-Dimensional Body	166
12. Source near a Wall: Method of Images	170
13. Conformal Mapping	171
14. Flow around an Elliptic Cylinder with Circulation.	173
15. Uniqueness of h-rotational Flows	175
16. Numerical Solution of Plane Irrotational Flow	176
17. Axisymmetric Irrotational Flow	181
18. Streamfunction and Velocity Potential for Axisymmetric Flow	184
19. Simple Examples of Axisymmetric Flows	185
20. Flow around a Streamlined Body of Revolution	187
21. Flow around an Arbitrary Body of Revolution	188
22. Concluding Remarks.	189
Exercises	190
Literature Cited	192
Supplemental Reading	192

Chapter 7

Gravity Waves

1. Introduction	194
2. The Wave Equation	194
3. Wave Parameters	196
4. Surface Gravity Waves	199
5. Some Features of Surface Gravity Waves.	203

6. Approximations for Deep and Shallow Water	209
7. Influence of Surface Tension.	213
8. Standing Waves	216
9. Group Velocity and Energy Flux	218
10. Group Velocity and Wave Dispersion	221
11. Nonlinear Steepening in a Nondispersive Medium	225
12. Hydraulic Jump	227
13. Finite Amplitude Waves of Unchanging Form in a Dispersive Medium	230
14. Stokes' Drift	232
15. Waves at a Density Interface between Infinitely Deep Fluids	234
16. Waves in a Finite Layer Overlying an Infinitely Deep Fluid	238
17. Shallow Layer Overlying an Infinitely Deep Fluid.	240
18. Equations of Motion for a Continuously Stratified Fluid	242
19. Internal Waves in a Continuously Stratified Fluid	245
20. Dispersion of Internal Waves in a Stratified Fluid	248
21. Energy Considerations of Internal Waves in a Stratified Fluid.	250
Exercises.. ..	254
Literature Citedl	255

Chapter 8

Dynamic Similarity

1. Introduction.....	256
2. Nondimensional Parameters Determined from Differential Equations	257
3. Dimensional Matrix. . . *	261
4. Buckingham's Pi Theorem.	262
5. Nondimensional Parameters and Dynamic Similarity	264
6. Comments on Model Testing	266
7. Significance of Common Nondimensional Parameters	268
Exercises	270
Literature Citedl.....	270
Supplemental Reading	270

Chapter 9

Laminar Flow

1. Introduction.	271
2. Analogy between Heat and Vorticity Diffusion	273
3. Pressure Change Due to Dynamic Effects	273

4.	Steady Flow between Parallel Plates
5.	Steady Flow in a Pipe
6.	Steady Flow between Concentric Cylinders
7.	Impulsively Started Plate: Similarity Solutions.
8.	Diffusion of a Vortex Sheet
9.	Decay of a Line Vortex
10.	Flow Due to an Oscillating Plate
11.	High and Low Reynolds Number Flows.
12.	Creeping Flow around a Sphere
13.	Nonuniformity of Stokes' Solution and Oseen's Improvement
14.	Hele-Shaw Flow
15.	Final Remarks
	Exercises..
	Literature Cited
	Supplemental Reading

Chapter 10

Boundary Layers and Related Topics

1.	Introduction
2.	Boundary Layer Approximation
3.	Different Measures of Boundary Layer Thickness
4.	Boundary Layer on a Flat Plate with a Sink at the Leading Edge
5.	Boundary Layer on a Flat Plate: Blasius Solution
6.	von Karman Momentum Integral
7.	Effects of Pressure Gradient
8.	Separation
9.	Description of Flow past a Circular Cylinder
10.	Description of Flow past a Sphere
11.	Dynamics of Sports Balls
12.	Two-Dimensional Jets
13.	Secondary Flows
14.	Perturbation Techniques.
15.	An Example of a Regular Perturbation Problem
16.	An Example of a Singular Perturbation Problem
17.	Decay of a Laminar Shear Layer
	Exercises..
	Literature Cited
	Supplemental Reading

Chapter 11**Computational Fluid Dynamics by Howard H. Hu**

1. Introduction	378
2. Finite Difference Method	380
3. Finite Element Method	385
4. Incompressible Viscous Fluid Flow	393
5. Two Examples	406
6. Concluding Remarks	424
Exercises	427
Literature Cited	428

Chapter 12**Instability**

1. Introduction	430
2. Method of Normal Modes	431
3. Thermal Instability: The Bénard Problem	432
4. Double-Diffusive Instability	444
5. Centrifugal Instability: Taylor Problem	448
6. Kelvin-Heinholtz Instability	453
7. Instability of Continuously Stratified Parallel Flows	461
8. Squire's Theorem and Orr-Sommerfeld Equation	467
9. Inviscid Stability of Parallel Flows	471
10. Some Results of Parallel Viscous Flows	475
11. Experimental Verification of Boundary Layer Instability	480
12. Comments on Nonlinear Effects	482
13. Transition	483
14. Deterministic Chaos	485
Exercises	493
Literature Cited	495

Chapter 13**Turbulence**

1. Introduction	496
2. Historical Notes	498
3. Averages	499
4. Correlations and Spectra	502
5. Averaged Equations of Motion	506

6.	Kinetic Energy Budget of Mean Flow.	512
7.	Kinetic Energy Budget of Turbulent Flow	514
8.	Turbulence Production and Cascade	517
9.	Spectrum of Turbulence in Inertial Subrange	520
10.	Wall-Free Shear Flow	522
11.	Wall-Bounded Shear Flow	528
12.	Eddy Viscosity and Mixing Length	536
13.	Coherent Structures in a Wall Layer	539
14.	Turbulence in a Stratified Medium.	540
15.	Taylor's Theory of Turbulent Dispersion	546
	Exercises	552
	Literature Cited	553
	Supplemental Reading	554

Chapter 14

Geophysical Fluid Dynamics

1.	Introduction	555
2.	Vertical Variation of Density in Atmosphere and Ocean.	557
3.	Equations of Motion	559
4.	Approximate Equations for a Thin Layer on a Rotating Sphere	562
5.	Geostrophic Flow	564
6.	Ekman Layer at a Free Surface	569
7.	Ekman Layer on a Rigid Surface	574
8.	Shallow-Water Equations.	577
9.	Normal Modes in a Continuously Stratified Layer.	579
10.	High- and Low-Frequency Regimes in Shallow-Water Equations	586
11.	Gravity Waves with Rotation.	588
12.	Kelvin Wave	591
13.	Potential Vorticity Conservation in Shallow-Water Theory	595
14.	Internal Waves	598
15.	Rossby Wave	608
16.	Barotropic Instability	613
17.	Baroclinic Instability.	615
18.	Geostrophic Turbulence	623
	Exercises	626
	Literature Cited	627

Chapter 15

Aerodynamics

1. Introduction	629
2. The Aircraft and Its Controls	630
3. Airfoil Geometry	633
4. Forces on an Airfoil.	633
5. Kutta Condition	635
6. Generation of Circulation.	636
7. Conformal Transformation for Generating Airfoil Shape.	638
8. Lift of Zhukhovskiy Airfoil	642
9. Wing of Finite Span	645
10. Lifting Line Theory of Prandtl and Lanchester	646
11. Results for Elliptic Circulation Distribution	651
12. Lift and Drag Characteristics of Airfoils	653
13. Propulsive Mechanisms of Fish and Birds	655
14. Sailing against the Wind	656
Exercises..	658
Literature Cited	660
Supplemental Reading	660

Chapter 16

Compressible Flow

1. Introduction	661
2. Speed of Sound	665
3. Basic Equations for One-Dimensional Flow	667
4. Stagnation and Sonic Properties	671
5. Area-Velocity Relations in One-Dimensional Isentropic Flow	676
6. Normal Shock Wave	680
7. Operation of Nozzles at Different Back Pressures	685
8. Effects of Friction and Heating in Constant-Area Ducts.	690
9. Mach Cone	694
10. Oblique Shock Wave.	696
11. Expansion and Compression in Supersonic Flow	700
12. Thin Airfoil Theory in Supersonic Flow	702
Exercises..	704

Literature Cited	705
Supplemental Reading	706

Appendix A

Some Properties of Common Fluids

A1. Useful Conversion Factors	707
A2. Properties of Pure Water at Atmospheric Pressure	708
A3. Properties of Dry Air at Atmospheric Pressure	708
A4. Properties of Standard Atmosphere	709

Appendix B

Curvilinear Coordinates

B1. Cylindrical Polar Coordinates	710
B2. Plane Polar Coordinates	712
B3. Spherical Polar Coordinates	712

Appendix C

Founders of Modern Fluid Dynamics

Ludwig Prandtl (1875-1953)	715
Geoffrey Ingram Taylor (1886-1975)	716
Supplemental Reading	717
