29

### II. BOSONS

510. The wave equation for particles with spin zero	33
5 11. Particles and antiparticles	37
512. Strictly neutral particles	41
513. The transformations C, P and T	44
514. The wave equation for a particle with spin one	50
515. The wave equation for particles with higher integral spins	53
516 Helicity states of a particle	55

## III. FERMIONS

17. Four-dimensional spinors	62
518. The relation between spinors and 4-vectors	64
5 19. Inversion of spinors	68
520. Dirac's equation in the spinor representation	73
521. The symmetrical form of Dirac's equation	75
522. Algebra of Dirac matrices	80
523 Plane waves	84
524 Spherical waves	88
525. The relation between the spin and the statistics	91
526. Charge conjugation and time reversal of spinors	94
527. Internal symmetry of particles and antiparticles	99
528 Bilinear forms	101
529 The polarization density matrix	106
530 Neutrinos	111
531. The wave equation for a particle with spin $3/2$	115

#### Contents

### IV. PARTICLES IN AN EXTERNAL FIELD

32 Dirac's equation for an electron in an external field	118
\$33 Expansion in powers of I/c	122
534. Fine structure of levels of the hydrogen atom	126
635. Motion in a centrally symmetric field	128
§36 Motion in a Coulomb field	133
§37 Scattering in a centrally symmetric field	140
638. Scattering in the ultra-relativistic case	142
The continuous-spectrum wave functions for scattering in a Coulomb field	144
540. An electron in the field of an electromagnetic plane wave	148
§41] Motion of spin in an external field	151
942. Neutron scattering in an electric field	157

#### V. RADIATION

543. The electromagnetic interaction operator		159
Emission and absorption		161
4 4 Dipole radiation		164
\$46: Electric multipole radiation		166
547. Magnetic multipole radiation	The set	171
548. Angular distribution and polarization of the radiation		173
549. Radiation from atoms: the electric type		181
550. Radiation from atoms: the magnetic type		186
§51. Radiation from atoms: the Zeeman and Stark effects		189
852. Radiation from atoms: the hydrogen atom		192
§53 Radiation from diatomic molecules: electronic spectra		197
§54 Radiation from diatomic molecules: vibrational and rotational spectra		203
555. Radiation from nuclei		205
556. The photoelectric effect: non-relativistic case		207
§57. The photoelectric effect: relativistic case		212
\$58. Photodisintegration of the deuteron		216

### VI. SCATTERING OF RADIATION

§59.	The scattering tensor	221
§60.	Scattering by freely oriented systems	231
§61.	Scattering by molecules	237
§62.	Natural width of spectral lines	240
§63.	Resonance fluorescence	244

### VII. THE SCATTERING MATRIX

§64. The scattering amplitude	247
§65. Reactions involving polarized particles	252
\$66. Kinematic invariants	256
§67. Physical regions	258
§68. Expansion in partial amplitudes	250
§69. Symmetry of helicity scattering amplitudes	264
§70. Invariant amplitudes	200
\$71 The unitarity condition	274
sine unitarity condition	2/8

### VIII. INVARIANT PERTURBATION THEORY

\$72. The chronological product	283
§73. Feynman diagrams for electron scattering	286
§74. Feynman diagrams for photon scattering	292
§75. The electron propagator	295
§76. The photon propagator	300
