Foreword by Edward Witten xi
Preface xv

1 **WHERE DO WE COME FROM? WHAT ARE WE? WHERE ARE WE GOING?** 1

To understand nature we need to know about particles, forces, and rules • Research in progress (RIP) • Equations? • Prediciton, postdiction, and testing • Where are the superpartners? • The boundaries of science have moved

2 **THE STANDARD MODEL OF PARTICLE PHYSICS** 16

The forces • Mass, decays, and quanta • The particles: Do we really know the fundamental constituents of matter? • Particles and fields • There are more particles • New ideas and remarkable predictions of the Standard Model • Experimental foundations of the Standard Model • Picturing Standard Model processes: Feynman diagrams • Spin, fermions, and bosons • Beyond the Standard Model

3 **WHY PHYSICS IS THE EASIEST SCIENCE— EFFECTIVE THEORIES** 40

Organizing effective theories by distance scales • Supersymmetry is an effective theory too •

The physics of the Planck scale • Effective theories replace renormalization • The human scales

4 SUPERSYMMETRY AND SPARTICLES 53

What is supersymmetry? • Some mysteries supersymmetry would solve • The superpartners • Supersymmetry as a spacetime symmetry: superspace • Hidden or "broken" supersymmetry

5 TESTING SUPERSYMMETRY EXPERIMENTALLY 72

Detectors and colliders • Recognizing superpartners • Spartides: their personalities, backgrounds, and signatures at LEP and Fermilab • Visit Fermilab • Future colliders • Can we do the experiments we need to do?

6 WHAT IS THE UNIVERSE MADE OF? 98

What particles are there in the universe? • Is the lightest superpartner the cold dark matter of the universe?

7 HIGGS PHYSICS 108

Finding Higgs bosons • Current evidence • LEP, Fermilab, and LHC • Studying Higgs bosons at Fermilab

8 SOME ADDITIONAL HELP FROM SUPERSYMMETRY, AND SOME CHALLENGES 117

Matter and antimatter asymmetry • Proton decay? • Rare decays • CP violation • Inflation • Perspectives and concerns

9 **SUPERSYMMETRY, STRING THEORY, AND THE PRIMARY THEORY** 130

String theory and M-theory • Broken or hidden supersymmetry • The role of data • Effective theories and the primary theory

10 **CAN WE REALLY UNDERSTAND THE ORIGIN OF THE UNIVERSE AND ITS NATURAL LAW(S)?** 136

Testing string theory and the primary theory • Practical limits? • Anthropic questions and supersymmetry • The end of science?

Appendices 149

A. The Standard Model Higgs mechanism, 749
B. The supersymmetry explanation of the Higgs mechanism, 7 53
C. Charginos and neutralinos, 157
D. Extra dimensions —large extra dimensions? 1 59

Some Recommended Reading 163
Glossary 165
Symbols, 7 65
Acronyms and Abbreviations, 166
Terms, 166
Index 195
