	Preface	xi	
INTRODUCTION		1	1
1-1 Events 1-2 Length 1-3 Time 1-4 Systems of Units			
VECTORS		6	2
2-1 Vectors and Scalars 2-2 Displacement as a Vector 2-3 Component Representation of Vectors 2-4 Vector Addition by the Component Method 2-5 Vectors in Three Dimensions 2-6 The Scalar and Vector Products 2-7 Unit Vectors			
STRAIGHT-LINE KINEMATICS		18	3
3-1 The Meaning of a Particle 3-2 Average Velocity 3-3 Instantaneous Velocity 3-4 Acceleration 3-5 Rectilinear Motion at Constant Acceleration 3-6 Freely Falling Bodies <i>Summary</i>			

4	<p>KINEMATICS IN TWO DIMENSIONS 36</p> <p>4-1 Velocity and Acceleration as Vector Quantities 4-2 Motion at Constant Acceleration 4-3 Projectile Motion 4-4 Uniform Circular Motion 4-5 Angular Speed 4-6 Radial and Tangential Components of Acceleration <i>Summary</i></p>
5	<p>THE LAWS OF INERTIA, MASS CONSERVATION, AND MOMENTUM CONSERVATION 55</p> <p>5-1 The Law of Inertia 5-2 Inertial Mass 5-3 The Standard of Mass 5-4 The Law of Conservation of Mass 5-5 Momen- tum Conservation in Head-on Collisions 5-6 Momentum Conservation in Two and Three Dimensions 5-7 Momentum Conservation in Atomic Collisions 5-8 The Rocket and Momentum Conservation <i>Summary</i></p>
6	<p>CENTER-OF-MASS AND REFERENCE FRAMES 76</p> <p>6-1 Velocity of the Center of Mass 6-2 Location of the Center of Mass 6-3 Reference Frames and Relative Velocities 6-4 Accelerated Objects and Reference Frames 6-5 Momen- tum Conservation in the Center-of-mass Reference Frame <i>Summary</i></p>
7	<p>FORCE 91</p> <p>7-1 The Fundamental Origins of Force 7-2 Force Defined 7-3 The Superposition Principle for Forces 7-4 Impulse and Momentum 7-5 Force Pairs 7-6 Weight <i>Summary</i></p>
8	<p>NEWTONIAN MECHANICS AND ITS APPLICATIONS 106</p> <p>8-1 Newton's Laws of Motion 8-2 Applications of Newton's Laws 8-3 Friction 8-4 Systems of Interacting Particles 8-5 Uniform Circular Motion 8-6 Noninertial Reference Frames and Inertial Forces 8-7 Systems with Nonconstant Mass <i>Summary</i></p>
9	<p>WORK AND KINETIC ENERGY 131</p> <p>9-1 Kinetic Energy Defined 9-2 Work Defined 9-3 The General Work-Energy Theorem 9-4 Some Further Charac- teristics of Work and Kinetic Energy 9-5 Work Done by a Spring 9-6 Power <i>Summary</i></p>

POTENTIAL ENERGY AND ENERGY CONSERVATION	150	10
<p>10-1 Potential Energy of a Spring 10-2 Gravitational Potential Energy 10-3 General Definition of Potential Energy 10-4 Properties of Potential Energy 10-5 The Conservation of Energy Law 10-6 Collisions <i>Summary</i></p>		
ANGULAR MOMENTUM	180	11
<p>11-1 Angular Velocity as a Vector 11-2 Some Qualitative Features of Angular Momentum 11-3 Torque as Time Rate of Change of Angular Momentum 11-4 A Particle with Constant Angular Momentum 11-5 Angular Momentum of a Rigid Body 11-6 Kinetic Energy of a Spinning Rigid Body 11-7 The Law of Angular-momentum Conservation 11-8 The Motion of a Top <i>Summary</i></p>		
ROTATIONAL DYNAMICS	207	12
<p>12-1 Rotational Kinematics 12-2 Moment of Inertia 12-3 Newton's Law for Rotation 12-4 Work and Kinetic Energy in Rotational Motion 12-5 Center of Gravity 12-6 Equilibrium of a Rigid Body 12-7 Two Rods in Rotational Dynamics <i>Summary</i></p>		
GRAVITATION	232	13
<p>13-1 The Law of Universal Gravitation 13-2 The Cavendish Experiment 13-3 The Gravitational Field 13-4 Kepler's Laws of Planetary Motion 13-5 Gravitational Potential Energy 13-6 The Energetics of Planetary Motion 13-7 The Principle of Equivalence 13-8 Gravitational Potential Energy of a Solid Sphere <i>Summary</i></p>		
SIMPLE HARMONIC MOTION	262	14
<p>14-1 Dynamics and Kinematics of Simple Harmonic Motion 14-2 Energetics of Simple Harmonic Motion 14-3 Small Oscillations and Simple Harmonic Motion 14-4 Pendula as Examples of Simple Harmonic Oscillators 14-5 Damped Oscillations 14-6 Forced Oscillations and Resonance <i>Summary</i></p>		
MECHANICAL PROPERTIES OF SOLIDS AND FLUIDS	281	15
<p>15-1 Elasticity of Solids 15-2 States of Matter 15-3 Pressure in a Fluid 15-4 Streamline Flow 15-5 The Equation of Continuity 15-6 Bernoulli's Theorem 15-7 Hydrostatics 15-8 Archimedes' Principle <i>Summary</i></p>		

16

WAVES ON A STRING 302

16-1 Basic Wave Behavior 16-2 The Superposition Principle and Interference 16-3 Reflection of Waves 16-4 Sinusoidal Waves 16-5 Energy Considerations in Wave Motion 16-6 Superposition of Sinusoidal Waves 16-7 Standing Waves 16-8 Resonance 16-9 Polarization *Summary*

17

COMPRESSIONAL WAVES 331

17-1 Longitudinal Waves 17-2 Compressional Wavespeeds 17-3 Pressure Variations for Elastic Waves 17-4 Intensity of a Sound Wave 17-5 Superposition, Reflection, and Standing Waves 17-6 Other Types of Mechanical Waves 17-7 Sound and Acoustics 17-8 Wavefronts and Rays 17-9 Intensity Variation with Distance from Source **17-10** Huygens' Principle 17-11 The Doppler Effect 17-12 Shock Waves *Summary*

18

TEMPERATURE, THERMAL EXPANSION, AND THE MACROSCOPIC PROPERTIES OF AN IDEAL GAS 356

18-1 Temperature and the Zeroth Law of Thermodynamics 18-2 Thermometry 18-3 The Constant-Volume Gas Thermometer 18-4 Thermal Expansion of Solids and Liquids 18-5 The General-gas Law 18-6 The Equation of State 18-7 Work Done by a Gas 18-8 Changes in the State of a Gas *Summary*

19

THE KINETIC THEORY AND THE FUNDAMENTAL CONCEPTS OF THERMODYNAMICS 376

19-1 Molecular **Size** 19-2 The Kinetic Theory Applied to an Ideal Gas 19-3 The Meaning of Temperature and Internal Energy 19-4 The Meaning of Heat and the First Law of Thermodynamics 19-5 The Specific Heats of an Ideal Gas 19-6 Distribution of Molecular Energies for Gases 19-7 Disorder and the Second Law of Thermodynamics 19-8 **Brownian Motion** 19-9 Collision Frequency and Mean Free Path 19-10 Deviations from the Ideal-gas Law and Changes in State *Summary*

20

THERMAL PROPERTIES OF SOLIDS AND LIQUIDS 408

20-1 Solids and Liquids as Thermal Systems 20-2 The First Law of Thermodynamics 20-3 Specific Heats and Heat Units 20-4 The Dulong-Petit Law 20-5 Latent Heats 20-6 Thermal Conduction 20-7 Thermal-energy Transfer through Radiation *Summary*

THE SECOND LAW OF THERMODYNAMICS AND HEAT ENGINES	427
21-1 Energy Convertibility 21-2 Heat Engines, Heat Rumps, and the Second Law of Thermodynamics 21-3 Reversible and Irreversible Heat Engines 21-4 The Carnot Cycle and the Thermodynamic Scale of Temperature 21-5 Entropy 21-6 Entropy and the Second Law of Thermodynamics <i>Summary</i>	
APPENDIXES	1
I. Fundamental Constants	
II. Conversion Factors	
III. Mathematical Relations	
IV. Natural Trigonometric Functions	
V. The Greek Alphabet	
-ANSWERS TO ODD-NUMBERED PROBLEMS	8
INDEX	12
