Contents

Preface vii

Chapter 1 Toroidal Configuration 1
1.1 INTRODUCTION 1
1.2 GENERAL COORDINATES 5
1.3 BASIS VECTORS, METRIC TENSOR 6
1.4 VECTOR OPERATORS 9
1.5 MAGNETIC FIELD REPRESENTATION 10
1.6 MAGNETIC SURFACES 11
1.7 MAGNETIC SURFACE DESTRUCTION 12
1.8 THE STANDARD MAP 22
1.9 Problems 27
1.10 References 28

Chapter 2 Equilibrium 31
2.1 INTRODUCTION 31
2.2 THE VIRIAL THEOREM 32
2.3 FIELD LINE CURVATURE. 33
2.4 GENERAL 3-D EQUILIBRIA 34
2.5 AXISYMMETRIC EQUILIBRIA 42
2.6 TOKAMAK ORDERING 44
2.7 CYLINDRICAL TOKAMAK EQUILIBRIA 45
2.8 THE SHAFRANOV EQUILIBRIUM 48
2.9 HIGH BETA EQUILIBRIUM 54
2.10 FLUX CONSERVING EQUILIBRIA 57

2.11 EQUILIBRIUM SCALING 58
2.12 EQUILIBRIUM TYPES 58
2.13 Problems 60
2.14 References 61

Chapter 3 Guiding Center Motion **63**
3.1 INTRODUCTION 63
3.2 HAMILTONIAN FORMULATION 66
3.3 ORBIT CLASSIFICATION 73
3.4 INTEGRAL INVARIANTS 81
3.5 TOROIDAL PRECESSION 84
3.6 LARGE ASPECT RATIO 85
3.7 DIAMAGNETIC CURRENT 89
3.8 CONFINEMENT OF FUSION ALPHA PARTICLES 91
3.9 Problems 92
3.10 References 93

Chapter 4 Linear Ideal Modes **95**
4.1 INTRODUCTION 95
4.2 PLASMA KINETIC AND POTENTIAL ENERGY 100
4.3 SELF ADJOINTNESS OF THE POTENTIAL ENERGY . . . 101
4.4 THE ENERGY PRINCIPLE 102
4.5 CONVENIENT FORM FOR δW 104
4.6 THE ENERGY PRINCIPLE IN CYLINDRICAL GEOMETRY 107
4.7 MHD INSTABILITIES IN LOW β TOKAMAKS 111
4.8 KINK MODE 113
4.9 THE M=1 EXTERNAL KINK 118
4.10 THE INTERNAL KINK MODE 119
4.11 BALLOONING INSTABILITIES 122
4.12 MAGNETIC WELL 128
4.13 BALLOONING, SIMPLE EQUILIBRIA 129
4.14 MERCIER, SUYDAM CRITERIA 132
4.15 MODIFICATION OF THE BALLOONING EQUATION . . . 136
4.16 TAE MODES 137
4.17 AXISYMMETRIC MODES 138
4.18 NUMERICAL MHD SPECTRUM 141
4.19 SHAPE AND ASPECT RATIO 142
4.20 Problems 146

4.21 ReferenCes 147

Chapter 5 Linear Resistive Modes **151**
5.1 INTRODUCTION 151
5.2 THE TEARING MODE 156
5.3 THE *m=1 TEARINGMODE* 166
5.4 THE SKIN CURRENT PROFILE 172
5.5 TOROIDAL AND SHAPING EFFECTS 173
5.6 THE RESISTIVE SURFACE KINK MODE 174
5.7 OPTIMIZED PROFILES 177
5.8 THE RIPPLING MODE 179
5.9 THE RESISTIVE INTERCHANGE MODE 180
5.10 RESISTIVE BALLOONING 180
5.11 DIAMAGNETIC ROTATION 182
5.12 Problems 186
5.13 References 188

Chapter 6 Nonlinear Behavior **191**
6.1 INTRODUCTION 191
6.2 THE REDUCED EQUATIONS 195
6.3 NONLINEAR EXTERNAL KINK 198
6.4 VACUUM BUBBLES 201
6.5 NONLINEAR INTERNAL KINK 205
6.6 COMPLETE RESISTIVE RECONNECTION 207
6.7 NONLINEAR TEARING MODE ANALYSIS 209
6.8 SAWTOOTH OSCILLATIONS 215
6.9 DISRUPTIONS 220
6.10 EMPIRICAL LIMITS 225
6.11 STABILIZATION OF TEARING MODES 226
6.12 Problems 230
6.13 References 231

Chapter 7 Mode-Particle Interaction **237**
7.1 INTRODUCTION 237
7.2 PASSING PARTICLE RESONANCE 242
7.3 TAE MODE DRIVE AND SATURATION 245
7.4 TRAPPED PARTICLE RESONANCE 249
7.5 FISHBONE INDUCED LOSS 251

7.6 FISHBONE DESTABILIZATION 253
7.7 THE FISHBONE CYCLE 262
7.8 RESISTIVE KINETIC INTERNAL KINK 265
7.9 STABILIZATION OF THE SAWTOOTH 266
7.10 BALLOONING DESTABILIZATION 271
7.11 ALPHA PARTICLE EFFECTS 272
7.12 Problems 274
7.13 References 275

Chapter 8 Transport **279**
8.1 INTRODUCTION 279
8.2 THE DRIFT KINETIC EQUATION 283
8.3 CROSS FIELD DIFFUSION 286
8.4 BOOTSTRAP CURRENT 290
8.5 NEOCLASSICAL TEARING 294
8.6 WARE PINCH 295
8.7 MAGNETIC FIELD RIPPLE TRANSPORT 295
8.8 DIFFUSION IN A STOCHASTIC FIELD 307
8.9 ISLAND INDUCED DIFFUSION 310
8.10 ANOMALOUS TRANSPORT 313
8.11 CONFINEMENT SCALING 317
8.12 BURN CONTROL 320
8.13 Problems 322
8.14 References 325

Chapter 9 Phase Integral Methods **331**
9.1 INTRODUCTION 331
9.2 CONNECTION FORMULAE 334
9.3 CAUSALITY 341
9.4 BOUND STATES - INSTABILITIES 342
9.5 OVERDENSE BARRIER - SCATTERING 346
9.6 UNDERDENSE BARRIER - SCATTERING 350
9.7 EIGENVALUE PROBLEMS 353
9.8 Problems 358
9.9 References 361

Index 363

List of Figures

1.1 Fusion power output history, Kilowatts. 3
1.2 General toroidal coordinates. 6
1.3 Toroidal and poloidal surfaces defining flux ψ and ψ_p. . . . 12
1.4 Broken flux surfaces due to a single island chain showing separatrix S, X-point and O-point. 14
1.5 Magnetic field structure due to perturbations. 18
1.6 Local q_I due to magnetic islands. 20
1.7 Kolmogorov entropy in stochastic bands near separatrices. . 21
1.8 Diffusion in the standard map. 25

2.1 Physical cylindrical coordinates X, Z, ϕ. 35
2.2 A stellarator equilibrium with weak external windings. . . . 38
2.3 The W7X stellarator equilibrium. 39
2.4 Flux surfaces for a second order equilibrium. 49
2.5 Magnetic energy and pressure in (a) low β and (b) high β tokamak equilibria. 56

3.1 A trapped particle drift orbit. 74
3.2 Separatrix and near separatrix orbits. 76
3.3 Orbit Types, high energy. 77
3.4 Trajectories, high energy. 78
3.5 Trajectories, high energy. 79
3.6 Orbit Types, low energy. 80
3.7 Bounce Frequency. 87
3.8 Toroidal precession rate versus κ, with shear $s = -.2, 0, .2$. . 89
3.9 Particles of gyro radius ρ contributing to poloidal current. 90

4.1 Kink mode growth rate. 114
4.2 Current density, density and q profile for the step model. . . 115
4.3 δW for the step model. 116
4.4 Stability diagram for kink modes. 117
4.5 Current profiles for high m surface kink modes. 118
4.6 A ballooning displacement. 123
4.7 Ballooning stability domain. 131
4.8 Ballooning stability including diamagnetic effects. 136
4.9 Alfvèn waves with and without toroidal coupling. 138

4.10 Axisymmetric modes. 140
4.11 MHD spectrum in a circular cross section cylinder. 142
4.12 Shaped equilibrium cross section. 143
4.13 Ballooning stability domain. 144

5.1 Geometry for resistive reconnection. 153
5.2 Equilibrium helical flux. 157
5.3 Helical Surface. 158
5.4 Magnetic field near $r = r_s$. 159
5.5 Magnetic island. 160
5.6 Perturbations of the helical flux. 161
5.7 Δ' For the peaked current profile. 166
5.8 Δ' For the rounded current profile. 167
5.9 Δ' For the flattened current profile. 168
5.10 Flux surfaces and current density during m = 1 tearing mode. 169
5.11 Growth rate for the m = 1 mode. 171
5.12 Unstable domains for a hollow profile: 173
5.13 The stabilizing effect of aspect ratio. 174
5.14 The stabilizing effect of ellipticity. 175
5.15 Growth rate for the kink-tearing mode. 177
5.16 A tearing mode stable profile. 178
5.17 Stability domain for the resistive ballooning mode 181
5.18 Growth rate of the kink and tearing mode branches. 185

6.1 Energy of the bubble state. 203
6.2 Energetically favorable domain for bubble formation. 204
6.3 Bubble evolution. 205
6.4 Final bubble states, low shear. 206
6.5 Final bubble states, high shear. 207
6.6 Flux surface evolution during m = 1 reconnection. 208
6.7 Helical flux, q profile and current profile before and after a Kadomtsev m = 1 reconnection. 209
6.8 Numerical simulation of sawtooth crash. 210
6.9 Magnetic surfaces for a large m = 1 island. 211
6.10 Island saturation width normalized to minor radius, for m = 2 mode. 213
6.11 Sawtooth X-ray signals. 215

6.12 Helical flux, q profile, and current profile before and after m = 1 reconnection. 217
6.13 Reconnection leaving $q(0) < 1$. 219
6.14 Soft X-ray signals during a major disruption. 220
6.15 Island saturation width versus $q(0)$. 221
6.16 Magnetic island evolution. 222
6.17 Domains of 2/1, 3/2 overlap. 223
6.18 High beta disruption. 224

7.1 Mirnov signal during fishbone mode, outline added by artist. 238
7.2 Internal kink mode stability diagram. 239
7.3 Particle distribution modification by TAE mode. 246
7.4 Particle loss by TAE resonance. 247
7.5 TAE induced drift island. 248
7.6 Neutral beam injection geometry. 251
7.7 Injected beam precession rate versus minor radius. 252
7.8 Trajectory of ejected beam ion. 253
7.9 Nyquist contour and D_k along real axis. 261
7.10 Map of Nyquist contour. 262
7.11 Growth for trapped particle and MHD branch. 263
7.12 Fishbone cycle. 264
7.13 Complex frequencies and growth rate, as a function of trapped particle density, for minority heating in JET. 269
7.14 Stability domain for sawtooth and fishbone modes. 270

8.1 Neoclassical diffusion. 289
8.2 Banana orbits originating at $\theta = 0$ with opposite pitches. . 291
8.3 Bootstrap current simulation. 292
8.4 Magnetic field strength variation with ripple. 296
8.5 Ripple well domain in Tore Supra (shaded). 297
8.6 A typical ripple trapped loss orbit. 298
8.7 Modification of neoclassical diffusion due to superbanana orbits. 299
8.8 Stochastic loss domain in INTOR. 305
8.9 Fraction of alpha particles lost versus q at the limiter. . . . 306
8.10 Neoclassical diffusion with field perturbations. 311
8.11 Diffusion versus field perturbation amplitude S. 312
8.12 Fluctuation spectrum. 314

9.1 Stokes diagram for $Q = (z - z_1)(z - z_2)(z - z_3)^2/(z - z4)$ with $z_1 = l + i$, $z_2 = -1 - i$, $z_3 = 1 - i$, and $z_4 = -1 + i$. . . 333
9.2 Stokes diagram for a first order turning point. 336
9.3 Stokes diagram for the Bessel function. 338
9.4 Stokes plot for the bound state problem. 343
9.5 Stokes plot for the bound state, $a \to b$. 345
9.6 δ and S for the bound state. 346
9.7 Stokes plot for the overdense barrier. 347
9.8 Q = z^2, Stokes plot. 348
9.9 Phase δ for overdense scattering, $Q = z^2 - b^2$. 349
9.10 Stokes constant for overdense scattering, Q = $z^2 - b^2$. . . . 349
9.11 Stokes plot for the underdense barrier. 351
9.12 Underdense barrier, rotated Stokes plot. 352
9.13 Q = $z^2 + b^2$, transmission and reflection vs b. 353
9.14 Q = z^2, Stokes plot. 354
9.15 Stokes diagram showing two turning points. 355
9.16 Stokes structure for $K \lhd Kc$ 356
9.17 Stokes structure for $K \rhd Kc$. 357
